### Transient Blocking Units - TBU™ Devices

Bourns® Model P650-U and P850-U TBU™ products are high speed, unidirectional surge protection components designed to protect equipment against faults caused by AC power cross, induction and lightning surges.

The TBU™ protector blocks surges and provides an effective barrier behind which sensitive electronics are not exposed to large voltages or currents during surge events.

### Agency Approval

## Recommended Pad Layout

### Pad Designation

Pad #	Apply
1	In1
2	NC
3	Out1
4	Out2
5	NC
6	In2

NC = Solder to PCB; do not make electrical connection, do not connect to ground.

TBU™ devices have matte-tin termination finish. Suggested layout should use non-solder mask define (NSMD). Recommended stencil thickness is 0.10-0.12 mm (.004-.005 in.) with stencil opening size 0.025 mm (.001 in.) less than the device pad size. As when heat sinking any power device, it is recommended that, wherever possible, extra PCB copper area is allowed. For minimum parasitic capacitance, do not allow any signal, ground or power signals beneath any of the pads of the device.
