

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# Photoelectrics Background Suppression Type PD112CNB25BP..

CARLO GAVAZZI

- Range: 2500 mm
- Accurate & stable distance adjustment
- Modulated, infrared light 850 nm
- Supply voltage: 10 to 30 VDC
- Output: 200 mA, NPN or PNP preset
- Make or break switching function selectable
- Adjustable ON- / OFF delay, 1 – 16 sec.
- LED indication for output and power ON
- Protection: reverse polarity, short circuit and transients
- Cable and plug versions
- Excellent EMC performance
- Remote test feature (mute)

## Product Description

The PD112CNB25 sensor comes in a 112 x 45 x 25 mm strong polycarbonate (PC) housing. The sensors are useful in applications where long range and high accuracy detection is required. Robust housing, a sophisticated mechanical design and high power LED for excellent performance in harsh environments. The sensor has a test input, for door mode, designed to

remotely disable (mute) the emitter and thereby evaluate the sensor function from a door controller or e.g. a PLC. The output type is preset (NPN and PNP) with selectable switching function NO/NC. 2 selectable modes are built in: "Industrial" for general automation and "Door" specifically for control of doors & gates.

## Operation Diagram

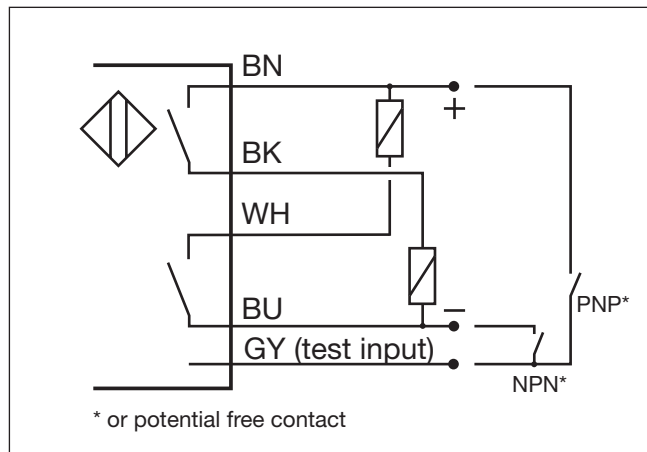

t<sub>v</sub> = Power on delay, t = Time delay (delay on operate and delay on release)

\* Only active in Door Mode

## Detection Diagram

## Wiring Diagrams

## Sensing Conditions "Industrial" mode

In this mode the maximum operating frequency is set to 250 Hz and detection is optimized for objects close to the background for top performance in general industry automation applications such as pallet wrapping machines, airport baggage conveyors, wood planks handling/stacking.

## Sensing Conditions "Door" mode

In this mode various parameters are optimized for monitoring and control of doors, from a position above the door/in the ceiling. Maximum operating frequency is set to 16.7 Hz, adapting to moving persons, and the test input – for evaluation of the sensor functioning through muting of the emitter – is enabled for use by a door controller or e.g. a PLC.

## Detection Principle

## Adjustment

### Background suppression adjustment\*

1. Align the sensor at the background
2. Turn distance calibration screw (28 turns) clockwise until yellow led is ON
3. Turn distance calibration screw (28 turns) counter clockwise until yellow led turns OFF

### Object detection adjustment

\*If no background exists a white cardboard can be used as background.

1. Align the sensor at the background
2. Turn distance calibration screw (28 turns) counter clockwise until yellow led turns OFF
3. Turn distance calibration screw (28 turns) clockwise until yellow led turns ON
4. The object can now be detected
