Description

The PI3A3159 is a, fast single-pole double-throw (SPDT) CMOS switch. It can be used as an analog switch or as a low-delay bus switch. Specified over a wide operating power supply voltage range, +1.5V to +3.6V, the PI3A3159 has an On-Resistance of 0.4Ω at 3.0V.

Control input, IN, tolerates input drive signals up to 3.3V, independent of supply voltage.

PI3A3159 is a lower voltage and On-Resistance replacement for the PI5A3159.

Note:

1. Signals on NC, NO, COM, or IN exceeding V_{DD} or GND are clamped by internal diodes. Limit forward diode current to 30mA.

***Caution**: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied.*
