## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### 3.3V, PCI Express® 1-lane, 2:1 Mux/DeMux Switch

## Features

- 2 Differential Channel, 2:1 Mux/DeMux
- PCI Express® 2.0 Performance, 5.0 Gbps
- Pinout optimized for placement between two PCIe slots
- Bi-directional operation
- Low Bit-to-Bit Skew, 5ps max
- Low Crosstalk: -26dB@5 GHz
- Low Off Isolation: -20dB@5 GHz
- $\mathrm{V}_{\mathrm{DD}}$ Operating Range: +3.3V
- ESD Tolerance: 2 kV HBM
- Packaging (Pb-free \& Green):
- 28 contact TQFN (ZH)

## Description

Pericom Semiconductor's PI3PCIE2215 is a 4 to 2 differential channel multiplexer/demultiplexer switch. The PI3PCIE family of switch solutions is fully compliant with PCIe® signals at 5.0 Gbps . Due to its low bit-to-bit skew, high channel-to-channel noise isolation and high bandwidth, this product is ideal for PCI Express switching.

## Application

Switch a PCI Express® lane output between two PCI Express lane inputs

## Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)
Storage Temperature .................................................... $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
Supply Voltage to Ground Potential .....................................................................................................................................................................................................................................................................................................

Note: Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

## Notes:

1. $\mathrm{C}_{\mathrm{L}}=$ Load capacitance: includes jig and probe capacitance.
2. $\quad \mathrm{R}_{\mathrm{T}}=$ Termination resistance: should be equal to $\mathrm{Z}_{\mathrm{OUT}}$ of the Pulse Generator
3. Output 1 is for an output with internal conditions such that the output is low except when disabled by the output control. output 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
4. All input impulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq \mathrm{MHz}, \mathrm{Z}_{\mathrm{O}}=50 \Omega, \mathrm{t}_{\mathrm{R}} \leq 2.5 \mathrm{~ns}, \mathrm{t}_{\mathrm{F}} \leq 2.5 \mathrm{~ns}$.
5. The outputs are measured one at a time with one transition per measurement.
