## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Precision Wide-Bandwidth Analog Switch

## Features

- Rail-To-Rail operation
- Pin-compatible with 3125 Bus Switch \& 74 series 125
- Single-Supply operation: 2 V to 6 V
- Low On-Resistance: $8 \Omega$ typical @ 5 V
- Tight match between channels: $0.9 \Omega$ typical
- R ${ }_{\text {ON }}$ flatness: $3 \Omega$ typical
- Low power consumption: $0.5 \mu$-ohm typical
- High Speed, $\mathrm{T}_{\mathrm{ON}}=8 \mathrm{~ns}$ typical
- High-current channel capability: $>100 \mathrm{~mA}$
- Wide bandwidth: $>200 \mathrm{MHz}$
- Packaging ( Pb -free \& Green available):
-14-pin SOIC (W)
-16-pin QSOP (Q)

## Applications

- Instrumentation, ATE
- Audio Switching and Routing
- Telecommunications Systems
- Data Communications
- Battery-Powered Systems
- Replaces Mechanical Relays

## Description

Pericom Semiconducto's PI5A101 is an all-purpose analog switch designed for single-supply operation from +2 V to +6 V . This switch is ideal for audio, video, and data switching and routing.
The PI5A101 is a quad SPST (single-pole, single-throw) NC (normally closed) function.

When on, each switch conducts current equally well in either direction. When off, they block voltages up to the powersupply rails.
The PI5A101 is fully specified with +5 V and +3.3 V supplies. With +5 V the $\mathrm{R}_{\mathrm{ON}}$ is $8 \Omega$ typical, making it ideal for replacing mechanical relays in data communications, test equipment, and instrumentation applications. Matching between channels is better than $2 \Omega$. R R flatness is better than $4 \Omega$ over the specified range.
These analog switches also offer wide bandwidth ( $>200 \mathrm{MHz}$ high speed ( $\mathrm{T}_{\mathrm{ON}}>15 \mathrm{~ns}$ ), and low charge injection $(\mathrm{Q}>10 \mathrm{pC})$.
The PI5A101 is available in the narrow-body 14-pin small SOIC and 16-pin QSOP packages for operation over the industrial $\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+85^{\circ} \mathrm{C}\right)$ temperature range.

## Pin Configurations

Switches show for logic "0" input
NIC $=$ Not Internally Connected

## Truth Table

| Logic | Switch |
| :---: | :---: |
| 0 | ON |
| 1 | OFF |

Lead Temperature (soldering, 10s) ........................................... $+300^{\circ} \mathrm{C}$

Narrow SO \& QSOP (derate $8.7 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
Lead Temperature (soldering, 10s)
$+300^{\circ} \mathrm{C}$

## Notes

1. Signals on NC, COM, or IN exceeding $\mathrm{V}_{\mathrm{CC}}$ or GND are clamped by internal diodes. Limit forward diode current to 30 mA .
2. Caution: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied.

## Electrical Specifications-Single +3.3V Supply ( $\mathrm{V}_{\mathrm{CC}}=+3.3 \mathrm{~V} \pm 10 \%$, $\mathrm{GND}=0 \mathrm{~V}, \mathrm{~V}_{\mathrm{INH}}=2.4 \mathrm{~V}, \mathrm{~V}_{\mathrm{INL}}=0.8 \mathrm{~V}$ )

## Notes:

1. The algebraic convention, where most negative value is a minimum and most positive is a maximum, is used in this data sheet.
2. Typical values are for DESIGN AID ONLY, not guaranteed or subject to production testing.
3. Guaranteed by design
4. $\Delta \mathrm{R}_{\mathrm{ON}}=\mathrm{R}_{\mathrm{ON}} \mathrm{MAX}-\mathrm{R}_{\mathrm{ON}} \mathrm{MIN}$
5. Flatness is defined as the difference between the maximum and minimum value of On-Resistance measured.
6. Leakage parameters are $100 \%$ tested at maximum rated hot temperature and guaranteed by correlation at $+25^{\circ} \mathrm{C}$.
7. Off Isolation $=20 \log _{10} V_{B} / V_{A}$. See Figure 3.
8. Between any two switches. See Figure 4.
9. $\mathrm{D}=\mathrm{R}_{\mathrm{FLAT}(\mathrm{ON})} / \mathrm{R}_{\mathrm{L}}$.

Typical Operating Characteristics $\left(\mathrm{T}_{\mathrm{A}}=+25^{\circ} \mathrm{C}\right.$, unless otherwise noted)
