## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Dual, Wide Bandwidth Analog Switches

## Features

- Single-Supply Operation (+2V to +6 V )
- Rail-to-Rail Analog Signal Dynamic Range
- Low On-Resistance (7.2-ohm with 5V supply) Minimizes Distortion and Error Voltages
- On-Resistance Flatness, 3-ohm typ.
- Low Charge Injection Reduces Glitch Errors. Q = 1.6pC typ.
- High Speed. $\mathrm{t}_{\mathrm{ON}}=7 \mathrm{~ns}$ typ.
- Wide - 3 dB Bandwidth: 326 MHz
- High-Current Channel Capability: $>100 \mathrm{~mA}$
- TTL/CMOS Logic Compatible
- Low Power Consumption ( $5 \mu \mathrm{~W}$ typ.)
- Packaging (Pb-free \& Green Available) - 8-pin, 118 mil plastic MSOP (U)

## Applications

- Audio, Video Switching and Routing
- Battery-Powered Communication Systems
- Computer Peripherals
- Telecommunications
- Portable Instrumentation
- Mechanical Relay Replacement
- Cell Phones
- PDAs

## Description

The PI5A127 is a dual SPST (single-pole single-throw) analog switches designed for single supply operation. These high-precision devices are ideal for low-distortion audio, video, signal switching and routing.
The PI5A127 is a normally closed (NC) switch.
Each switch conducts current equally well in either direction when on. When off, they block voltages up to $\mathrm{V}+$.
These switches are fully specified with +5 V and +3.3 V supplies. With +5 V , they guarantee $<10$-ohm ON-resistance. On-resistance matching between channels is within 2 -ohm. On-resistance flatness is less than 5 -ohm over the specified range. These switches also guarantee fast switching speeds ( $\mathrm{t}_{\mathrm{ON}}<20 \mathrm{~ns}$ ).
These products are available in 8-pin SOIC and MSOP plastic packages for operation over the industrial temperature range $\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+85^{\circ} \mathrm{C}\right)$.

## Note 1:

Signals on NC, NO, COM, or IN exceeding V+ or GND are clamped by internal diodes. Limit forward diode current to 30 mA .

Caution: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied.

## Notes:

1. The algebraic convention, where the most negative value is a minimum and the most positive is a maximum, is used in this data sheet.
2. Typical values are for DESIGN AID ONLY, not guaranteed or subject to production testing.
3. Guaranteed by design
4. $\Delta \mathrm{R}_{\mathrm{ON}}=\mathrm{R}_{\mathrm{ON}} \max -\mathrm{R}_{\mathrm{ON}} \min$.
5. Flatness is defined as the difference between the maximum and minimum value of ON -resistance measured.
6. Leakage parameters are $100 \%$ tested at maximum rated hot temperature and guaranteed by correlation at $+25^{\circ} \mathrm{C}$.
