Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## PI6C22409

## 2.5/3.3V 200MHz High-Speed, Low-Jitter, Low-Skew, Zero-Delay Clock Buffer with 9 Outputs

## Features

- Phase-Lock Loop Clock Distribution (Zero Input-to-Output Delay)
- Internal feedback connection
- Distributes one-to-two banks of four outputs w/ one CLKOUT (9 outputs total)
- High-Performance
  - 30 MHz to 220 MHz operation frequency range
  - <100ps output-to-output skew
  - <100ps cycle-to-cycle jitter
  - Low Power Configuration 26mA (outputs unloaded)
- Spread-spectrum capable
- Power supply:  $+2.5V \pm 5\%$ ;  $+3.3V \pm 10\%$
- Industrial temperature range parts available
- Packaging (Pb-free & Green):
- 16-pin TSSOP (L)
- 16-pin SOIC (W)

### Description

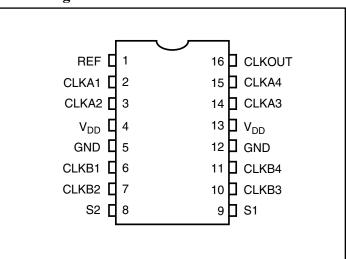

The PI6C22409 is a low-jitter, low-skew, high-speed Zero-Delay Buffer with 9 outputs designed to address high-speed clock distribution applications.

The PI6C22409 features an internal patented Phase Lock Loop (PLL) with high drive output capability and internal feedback.

The PI6C22409 operates from a 2.5V  $\pm$ 5% or 3.3V  $\pm$ 10% supply. All support documentation can be found on Pericom's web site at: www.pericom.com.

Pericom can customize these devices for specific requirements.

## **Pin Configuration**

## Pin Description

Pin	Signal	Description
1	REF	Reference clock input with weak pull down.
2,3,6,7, 10,11,14,15	CLKA1, CLKA2, CLKB1, CLKB2, CLKB3, CLKB4, CLKA3, CLKA4, CLKOUT	Clock output. Clock outputs with weak pull-down.
16	CLKOUT	Clock output. Internal feedback on this pin.
5,12	GND	Ground
4,13	V <sub>DD</sub>	Power
8,9	S2, S1	Select input with weak pull-ups.

Notes:

1. Stresses greater then those listed under Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the this specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

2. 0JA and 0JB values are determined for a 4-layer board in still-air, unless otherwise stated.

Note:

1. See Switching Waveforms

3. Specifications are guaranteed by design and not production tested.

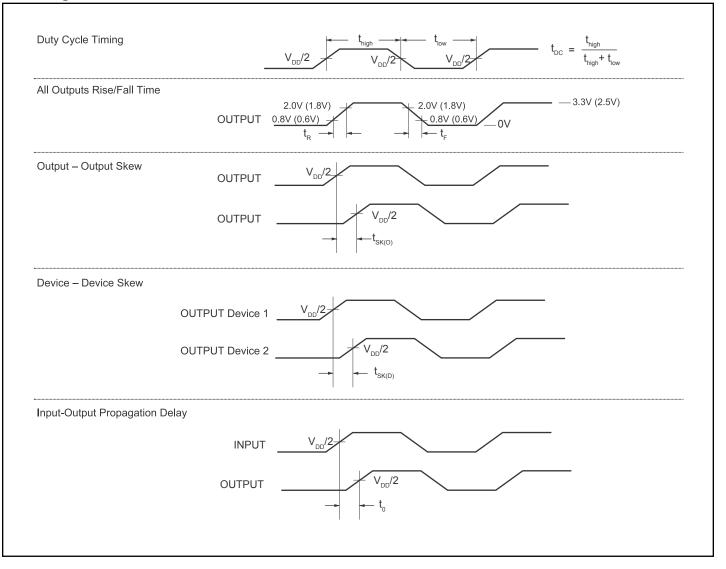

4. Measured at 100MHz.

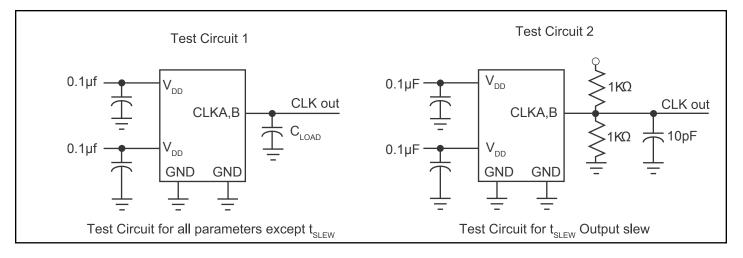

5. Measured with 16-Pin SOIC package

<sup>2.</sup> All clock output should have the same loading to achieve zero delay between the input and outputs and zero output-to-output skew. Since the CLKOUT pin is the internal feedback to the PLL, its relative loading can adjust to input-to-output delay. If input-to-output delay adjustments are needed, the CLKOUT load may be changed to vary the delay between the REF input to the clock outputs. Output-to-output skew includes CLKA1-4 and CLKB1-4.
