

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# Low-Noise, Phase-Locked Loop **Clock Driver with 10 Clock Outputs**

#### **Features**

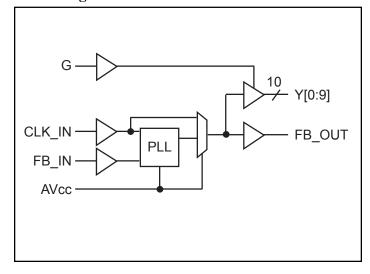

- Operating Frequency up to 150 MHz
- Low-Noise Phase-Locked Loop Clock Distribution that meets 133 MHz Registered DIMM Synchronous DRAM modules for server/workstation/PC applications
- Allows Clock Input to have Spread Spectrum modulation for EMI reduction
- Zero Input-to-Output delay: Distribute one Clock Input to one Bank of Ten outputs, with an output enable.
- Low jitter: Cycle-to-Cycle jitter ±75ps max.
- On-chip series damping resistor at clock output drivers for low noise and EMI reduction
- Operates at 3.3V V<sub>CC</sub>
- Packaging(Pb-free & Green available):
- -24-pin TSSOP(L)

#### **Description**

The PI6C2510-133 is a "quiet," low-skew, low-jitter, phase-locked loop (PLL) clock driver, distributing high-frequency clock signals for SDRAM and server applications. By connecting the feedback FB OUT output to the feedback FB IN input, the propagation delay from the CLK\_IN input to any clock output will be nearly zero. This zero-delay feature allows the CLK IN input clock to be distributed, providing one clock input to one bank of ten outputs, with an output enable.

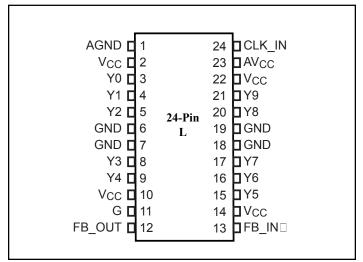

This clock driver is designed to meet the PC133 SDRAM Registered DIMM specification. For test purposes, the PLL can be bypassed by strapping AV<sub>CC</sub> to ground.

#### **Block Diagram**

#### Pin Configuration

1

#### **Functional Table**

| Inputs | Outputs |        |  |
|--------|---------|--------|--|
| G      | Y[0:9]  | FB_OUT |  |
| L      | L       | CLK_IN |  |
| Н      | CLK_IN  | CLK_IN |  |

PS8383B 09/14/04

#### **Pin Functions**

| Pin Name         | Pin Number                  | Туре   | Description  |
|------------------|-----------------------------|--------|--|
| CLK_IN           | 24                          | I      | Reference Clock input. CLK_IN allows spread spectrum.  |
| FB_IN            | 13                          | I      | Feedback input. FB_IN provides the feedback signal to the internal PLL   |
| G                | 11                          | I      | Output bank enable. When G is LOW, outputs Y[0:9] are disabled to a logic low state. When G is HIGH, all outputs Y[0:9] are enabled.   |
| FB_OUT           | 12                          | 0      | Feedback output. FB_OUT is dedicated for external feedback. FB_OUT has an embedded series-damping resistor of the same value as the clock outputs Y[0:9].  |
| Y[0:9]           | 3,4,5,8,9,15<br>16,17,20,21 | О      | Clock outputs. These outputs provide low-skew copies of CLK_IN. Each output has an embedded series-damping resistor.   |
| AV <sub>CC</sub> | 23                          | Power  | Analog power supply. $AV_{CC}$ can be also used to bypass the PLL for test purposes. When $AV_{CC}$ is strapped to ground, PLL is bypassed and $CLK_IN$ buffered directly to the device outputs. |
| AGND             | 1                           | Ground | Analog ground. AGND provides the ground reference for the analog circuitry.  |
| V <sub>CC</sub>  | 2,10,14,22                  | Power  | Power supply   |
| GND              | 6,7,18,19                   | Ground | Ground   |

# **DC** Specifications

#### Absolute maximum ratings over operating free-air temperature range.

| Symbol             | Parameter   | Min. | Max.               | Units |
|--------------------|---|------|--------------------|-------|
| VI                 | Input voltage range   |      | Vas± 0.5           |       |
| Vo                 | Output voltage range  | -0.5 | $V_{\rm CC}$ + 0.5 | V     |
| V <sub>I</sub> _DC | DC input voltage  |      | +5.0               |       |
| I <sub>O</sub> _DC | DC output current   |      | 100                | mA    |
| Power              | Maximum power dissipation at $T_A = 55^{\circ}C$ in still air |      | 1.0                | W     |
| T <sub>STG</sub>   | Storage temperature   | -65  | 150                | °C    |

Note: Stress beyond those listed under "absolute maximum ratings" may cause permanent damage to the device.

| Parameter       | Test Conditions                                  | V <sub>CC</sub> | Min. | Тур. | Max. | Units |
