Description

The PI6C4512 is a precision general-purpose clock synthesizer with $f_{\text{max}} \leq 200\text{MHz}$. The PI6C4512 uses an external low-cost crystal to generate a very accurate rate and stable system clocks.

Maximum Ratings

(Above which the useful life may be impaired. For user guidelines, not tested)

Storage temperature	-65°C to +150°C
Ambient Operating Temperature	0°C to +70°C
Supply Voltage to Ground Potential (V _{CC}).....	-0.3V to +7.0V
Inputs (Referenced to GND).....	-0.5V to V _{CC} +0.5V
Clock Output (Referenced to GND)	-0.5V to V _{CC} +0.5V
Soldering Temperature (Max of 10 seconds).....	260°C

Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Pin Description

Name	Pin	Description
X1/ICLK	1	Crystal connection or clock input.
V _{CC}	2	Supply voltage: 3.3V ±10% or 5.0V ±10%
GND	3	Connect to GND
REF	4	Buffered crystal oscillator output clock
CLK	5	Clock output
S ₀	6	Multiplier select pin 0. Connect to GND or V _{CC} or float (no connection).
S ₁	7	Multiplier select pin 1. Connect to GND or V _{CC} or float (no connection).
X2	8	Crystal connection. Leave unconnected for clock input.

External Components

The PI6C4512 requires a minimum number of external components for proper operation. Decoupling capacitors of 0.1µF || 0.01µF should be connected between each V_{DD} and GND and placed as close to the chip as possible. A series termination resistor of 33Ω may be used for clock outputs. If a crystal is used, it should be a fundamental mode, parallel resonant crystal. Crystal capacitors should be connected from X₁ to ground and from X₂ to ground to according to the crystal specifications. The value of capacitors is given by the following equation, where C_L is the crystal load capacitance: Crystal caps (pF) = (C_L -15) x 2.
