## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Product Features

- Compatible with $\mathrm{LCX}^{\mathrm{TM}}$ and $\mathrm{LVT}^{\mathrm{TM}}$ families of products
- Supports 5V Tolerant Mixed Signal Mode Operation - Input can be 3 V or 5 V
- Output can be 3 V or connected to 5 V bus
- Advanced Low Power CMOS Operation
- Excellent output drive capability:

Balanced drives ( 24 mA sink and source)

- Low ground bounce outputs
- Hysteresis on all inputs
- Industrial operating temperature range: $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- Packages available:
-20-pin 173 mil wide plastic TSSOP(L)
-20-pin 150 mil wide plastic $\mathrm{QSOP}(\mathrm{Q})$
-20 -pin 150 mil wide plastic TQSOP (R)
-20-pin 300 mil wide plastic SOIC(S)

## Product Description

Pericom Semiconductor's PI74LPT series of logic circuits are produced in the Company's advanced 0.6 micron CMOS technology, achieving industry leading speed grades.
The PI74LPT373 is an 8-bit transparent latch designed with 3 -state outputs and is intended for bus oriented applications. When Latch Enable (LE) is HIGH, the flip-flops appear transparent to the data. The data that meets the set-up time when LE is LOW is latched. When $\overline{\mathrm{OE}}$ is HIGH, the bus output is in the high impedance state.
The PI74LPT373 can be driven from either 3.3V or 5.0 V devices allowing this device to be used as a translator in a mixed $3.3 / 5.0 \mathrm{~V}$ system.

#### Abstract

Note: Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Notes:

1. For Max. or Min. conditions, use appropriate value specified under Electrical Characteristics for the applicable device type.
2. Typical values are at $\mathrm{Vcc}=3.3 \mathrm{~V},+25^{\circ} \mathrm{C}$ ambient and maximum loading.
3. Not more than one output should be shorted at one time. Duration of the test should not exceed one second.
4. This parameter is guaranteed but not tested.
5. $\mathrm{Voh}=\mathrm{Vcc}-0.6 \mathrm{~V}$ at rated current.

## Notes:

1. Propagation Delays and Enable/Disable times are with $\mathrm{Vcc}=3.3 \mathrm{~V} \pm 0.3 \mathrm{~V}$, normal range. For $\mathrm{Vcc}=2.7 \mathrm{~V}$, extended range, all Propagation Delays and Enable/Disable times should be degraded by $20 \%$.
2. See test circuit and wave forms.
3. Minimum limits are guaranteed but not tested on Propagation Delays.
4. This parameter is guaranteed but not production tested.
5. Skew between any two outputs, of the same package, switching in the same direction. This parameter is guaranteed by design.
