

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**SOT1NY™ Low Voltage, Zero-Delay,
Active Transmission Line Clamp**
Features

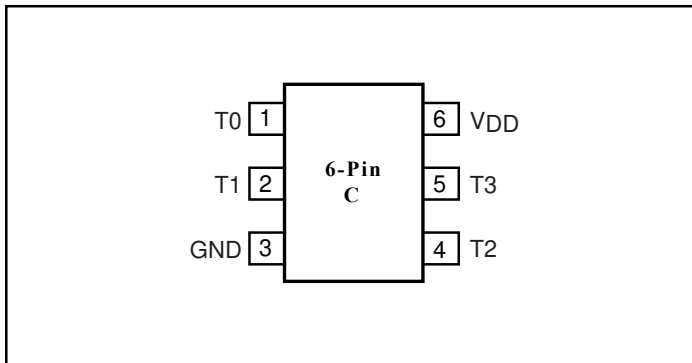

- 5V and 3.3V Line Clamping
- Near Zero Quiescent Supply Current: 10µA Maximum
 - Active circuit clamping
- Low Capacitance: 5pF (typ.)
- High 4kV ESD Protection
- Packaging (Pb-free & Green Available):
 - 6-pin SC70 (C)

Benefits

- Reduced EMI
 - Limits high-frequency ring voltage
- Minimum Power Consumption
- Higher Noise Margin
- Minimal Line Loading

Applications

- CPU Termination
- Backplane Termination
- Termination

Product Pin Configuration

Description

The PI7AT04 actively clamps overshoot and undershoot voltages on transmission lines and backplanes. Improperly terminated data lines have reflections that can result in lost data or unreliable system behavior.

The PI7AT04 clamps undershoot and overshoot voltages for up to four lines. For other options and packages contact Pericom Marketing.

Compared to Schottky diodes, the PI7AT04 uses less power and requires no additional drive power. By avoiding a passive termination/clamp technology, PI7AT04 power consumption is very low at 5V.

The PI7AT04 is ideal in applications where characteristic impedance varies with system configuration. Changing characteristic impedance is common when memory or function cards are added or removed on a bus.

The PI7AT04 does not replace parallel terminator resistors.

Product Pin Description

Pin Number	Name	Description
6-pin, SC70		
1	T0	Line Termination
2	T1	Line Termination
4	T2	Line Termination
5	T3	Line Termination
3	GND	Ground
6	V _{DD}	Positive Supply Voltage

Functional Block Diagram

Absolute Maximum Ratings

DC Voltage on Any Pin	6.5V
Storage Temperature	-65°C to 150°C
Lead Temperature (Soldering, 10 seconds)	300°C
Thermal Information	
MSOP Continuous Power Dissipation: derate 8.7mW/°C above 70°C)	650mW
SC70/SOT23 Continuous Power Dissipation: derate 7.0mW/°C above 70°C)	550mW

Electrical Characteristics

$V_{DD} = 5V$ Over Operating Temperature Range, unless otherwise noted.

Parameter	Symbol	Conditions	Temp	Min.	Typ	Max.	Units
Line Signal Voltage Above V_{DD}		Note 2			0.6		V
Line Signal Voltage Below GND		Note 2			-0.6		
Input Line Capacitance	C_I	Line Voltage = V_{DD}	25		5		pF
Input High Current	I_{IH}	$V_{LINE} = V_{DD}$, $V_{DD} = 5.5V$				5	μA
Input Low Current	I_{IL}	$V_{LINE} = 0V$, $V_{DD} = 5.5V$				5	
Supply Voltage Range	V_{DD}			4.5		5.5	V
Quiescent Supply Current	I_{DD}	All lines floating				20	μA
ESD Protection		MIL-STD-883, Method 3015			4		kV

$V_{DD} = 3.3V$ Over Operating Temperature Range, unless otherwise noted.

Parameter	Symbol	Conditions	Temp	Min.	Typ.	Max.	Units
Line Signal Voltage Above V_{DD}		Note 2			0.6		V
Line Signal Voltage Below GND		Note 2			-0.6		
Input Line Capacitance	C_I	Line Voltage = V_{DD}	25		5		pF
Input High Current	I_{IH}	$V_{LINE} = V_{DD}$, $V_{DD} = 3.6V$				3	μA
Input Low Current	I_{IL}	$V_{LINE} = 0V$, $V_{DD} = 3.6V$				3	
Supply Voltage Range	V_{DD}			3.0		3.6	V
Quiescent Supply Current	I_{DD}	All lines floating				20	μA
ESD Protection		MIL-STD-883, Method 3015			4		kV

Notes:

1. Capacitance and ESD parameters are guaranteed by design.
2. Maximum line voltage clamped during a transient.

Application Information

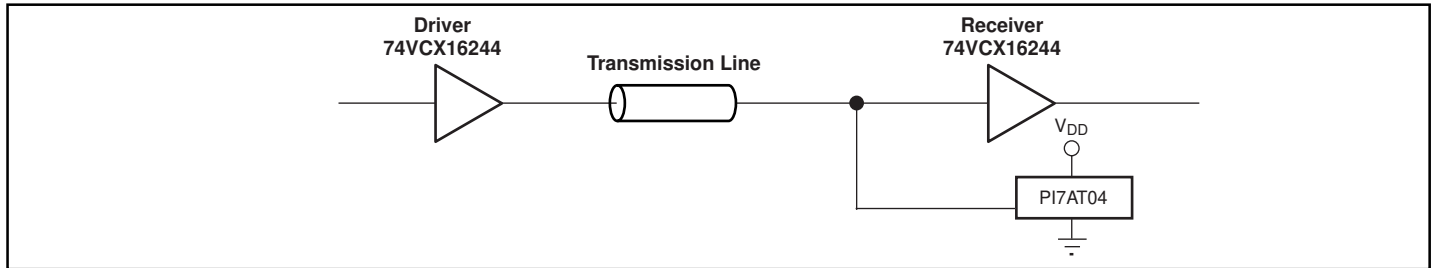

Figure 1. Test Diagram

Figure 2. VCX16244 ($V_{cc} = 3.6V$) output after driving 3-inch transmission line. Signal capture at end of line

Figure 3. VCX16244 ($V_{cc} = 3.6V$) output after driving 3-inch transmission line and driving PI7AT04 input. Signal as seen at the input pin. Signal capture when V_{cc} in NC, $V_{cc} = 3.6V$.

Packaging Mechanical: 6-Pin SC70 (C)

Ordering Information

Ordering Code	Line Terminations	Package Code	Package Description	Top Marking
PI7AT04CX	4	C	6-pin SC70	Z9
PI7AT04CEX	4	C	6-pin SC70	Z9
