

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## **PIP3207-DC**

#### **DESCRIPTION**

Monolithic dual channel high side protected power switch in TOPFET2 technology assembled in a 7 pin plastic surface mount package.

#### **APPLICATIONS**

General purpose switch for driving lamps, motors, solenoids, heaters.

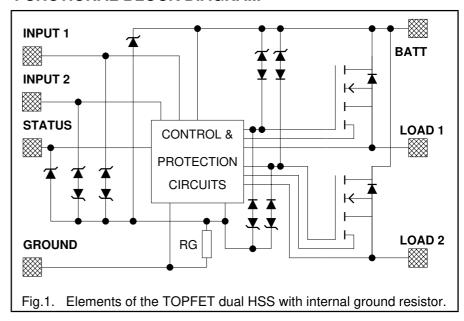

### **FEATURES**

- Vertical power TrenchMOS
- Low on-state resistance
- CMOS logic compatible
- Very low quiescent current
- Ovértemperature protection
- Load current limiting
- Overload and short circuit protection
- Self resetting overcurrent protection
- Overvoltage and undervoltage shutdown with hysteresis
- Off-state open circuit load detection
- Diagnostic status indication
- Voltage clamping for turn off of inductive loads
- · ESD protection on all pins
- Reverse battery, overvoltage and transient protection

#### **QUICK REFERENCE DATA**

SYMBOL	MIN.	UNIT	
I <sub>L</sub>	Nominal load current (ISO)	8	Α
SYMBOL	MAX.	UNIT	
V <sub>BG</sub> I <sub>L</sub> T <sub>ON</sub>	Continuous off-state supply voltage Continuous load current Continuous junction temperature On-state resistance, T <sub>j</sub> = 25°C	50 16 150 40	V A °C mΩ

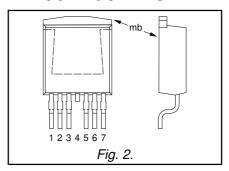

#### **FUNCTIONAL BLOCK DIAGRAM**

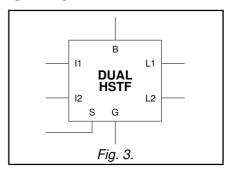

#### **PINNING - SOT427**

PIN	DESCRIPTION
1 2 3 4 5 6 7	load 1 ground input 1 connected to mb status input 2 load 2
mb	battery

**PIN CONFIGURATION** 

**SYMBOL** 

#### CONVENTION

Positive currents flow into pins, except for load and ground pins.

Philips Semiconductors Product specification

# TOPFET dual high side switch

PIP3207-DC

### **LIMITING VALUES**

Limiting values in accordance with the Absolute Maximum System (IEC 134)

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
$V_{BG}$	Continuous supply voltage		0	50	V
I <sub>L</sub>	Continuous load current per channel	T <sub>mb</sub> ≤ 135°C	-	8	Α
$P_{D}$	Total power dissipation	T <sub>mb</sub> ≤25°C	-	83.3	W
T <sub>stg</sub>	Storage temperature		-55	175	°C
T <sub>j</sub>	Continuous junction temperature <sup>1</sup>		-40	150	°C
$V_{GB}$	Reverse battery voltages <sup>2</sup> Continuous reverse voltage Peak reverse voltage		-	16 32	V V
	Application information				
R <sub>I</sub> , R <sub>S</sub>	External resistors <sup>3</sup>	to limit input, status currents	3.2	-	kΩ
	Input and status currents Continuous input current Continuous status current Repetitive peak input current Repetitive peak status current	$\delta \leq$ 0.1, $t_p$ = 300 μs $\delta \leq$ 0.1, $t_p$ = 300 μs	-5 -5 -50 -50	5 5 50 50	mA mA mA
	Inductive load clamping	$V_{BG} = 13 \text{ V}, I_{L} = 8 \text{ A}$			
E <sub>BL</sub>	Non-repetitive clamping energy (one channel)	$T_j = 150$ °C prior to turn-off	-	150	mJ

### **ESD LIMITING VALUE**

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
V <sub>C</sub>	Electrostatic discharge capacitor voltage	Human body model; C = 250 pF; R = 1.5 kΩ	-	2	kV

<sup>1</sup> For normal continuous operation. A higher  $T_j$  is allowed as an overload condition but at the threshold  $T_{j(TO)}$  the over temperature trip operates to protect the switch.

<sup>2</sup> Reverse battery voltage is allowed only with external resistors to ensure that the input and status currents do not exceed the limiting values. The internal ground resistor limits the reverse battery ground current. The connected loads must limit the reverse load currents. Power is dissipated and the T<sub>j</sub> rating must be observed.

<sup>3</sup> To limit currents during reverse battery and transient overvoltages (positive or negative).

PIP3207-DC

#### THERMAL CHARACTERISTIC

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
	Thermal resistance <sup>1</sup>					
$R_{\text{th }j\text{-mb}}$	Junction to mounting base	per channel	-	2.4	3	K/W
		both channels	-	1.2	1.5	K/W

#### STATIC CHARACTERISTICS

Limits are at -40  $^{\circ}$ C  $\leq$  T<sub>mb</sub>  $\leq$  150  $^{\circ}$ C and typicals at T<sub>mb</sub> = 25  $^{\circ}$ C unless otherwise stated

SYMBOL	PARAMETER	CONDITIO	NS			MIN.	TYP.	MAX.	UNIT
	Clamping voltages								
$V_{BG}$	Battery to ground	$I_G = 1 \text{ mA}$				45	55	65	V
$V_{BL}$	Battery to load per channel	$I_L = I_G = 1 \text{ m}$	nΑ			50	55	65	V
$V_{GL}$	Ground to load <sup>2</sup>	$I_L = 10 \text{ mA}$				18	23	28	V
		$I_{L} = 10 \text{ A}; t_{p}$	$= 300 \mu$	เร		20	25	30	٧
	Supply voltage	battery to	ground						
$V_{BG}$	Operating range <sup>3</sup>	-				5.5	-	35	٧
	Currents	9 V ≤ V <sub>BG</sub> ≤	9 V ≤ V <sub>BG</sub> ≤ 35 V						
I <sub>B</sub>	Total quiescent current4	$V_{LG} = 0 V$	$V_{LG} = 0 \text{ V}$					20	μΑ
				$T_{mb}$ =	= 25°C	-	0.1	1	μΑ
I <sub>L</sub>	Off-state load current per	$V_{BL} = V_{BG}$				-	-	10	μΑ
	channel			$T_{mb}$ =	= 25°C	-	0.1	1	μΑ
l <sub>G</sub>	Operating current	one channe	el on			-	1.8	3	mA
		both chann				-	3.6	6	mA
I <sub>L</sub>	Nominal load current <sup>5</sup>	$V_{BL} = 0.5 V$	$T_{mb} = 8$	5°C		8	-	-	Α
$R_{G}$	Effective internal ground	I <sub>G</sub> = -200 m	A; $t_p = 3$	00 μs		40	75	100	Ω
	resistance <sup>6</sup>								
	Resistances per channel	$V_{BG}$	I <sub>L</sub>	t <sub>p</sub> <sup>7</sup>	T <sub>j</sub>				
R <sub>ON</sub>	On-state resistance	9 to 35 V	10 A	300 μs	25°C	-	30	40	mΩ
					150°C	-	60	80	mΩ
R <sub>ON</sub>	On-state resistance	5.5 V	5 A	300 μs	25°C	-	50	60	mΩ
					150°C	-	100	120	mΩ

<sup>1</sup> Of the output Power MOS transistors.

<sup>2</sup> For a high side switch, the load pin voltage goes negative with respect to ground during the turn-off of an inductive load. This negative voltage is clamped by the device.

<sup>3</sup> On-state resistance is increased if the supply voltage is less than 7 V.

<sup>4</sup> This is the continuous current drawn from the battery when both inputs are low and includes leakage currents to the loads.

**<sup>5</sup>** Per channel but with both channels conducting. Defined as in ISO 10483-1.

<sup>6</sup> Equivalent of the parallel connected resistors for both channels.

<sup>7</sup> The supply and input voltage for the R<sub>ON</sub> tests are continuous. The specified pulse duration t₀ refers only to the applied load current.

PIP3207-DC

#### **INPUT CHARACTERISTICS**

 $5.5~V \le V_{BG} \le 35~V$ . Limits are at  $-40°C \le T_{mb} \le 150°C$  and typicals at  $T_{mb} = 25°C$  unless otherwise stated.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
I <sub>I</sub>	Input current	$V_{IG} = 5 V$	20	60	160	μΑ
V <sub>IG</sub>	Input clamping voltage	Ι <sub>ι</sub> = 200 μΑ	5.5	7	8.5	V
$V_{IG(ON)}$	Input turn-on threshold voltage		-	2.1	3	V
$V_{IG(OFF)}$	Input turn-off threshold voltage		1.2	1.8	-	V
$\Delta V_{IG}$	Input turn-on hysteresis		0.15	0.3	0.5	V
I <sub>I(ON)</sub>	Input turn-on current	$V_{IG} = 3 V$	-	-	100	μΑ
I <sub>I(OFF)</sub>	Input turn-off current	V <sub>IG</sub> = 1.2 V	12	-	-	μΑ

### **OPEN CIRCUIT DETECTION CHARACTERISTICS**

An open circuit load on either channel can be detected in the off-state. Refer to TRUTH TABLE. This feature requires external load pull-up to a positive supply voltage via a suitable resistor. Limits are at -40°C  $\leq$  T<sub>mb</sub>  $\leq$  150°C and typical is at T<sub>mb</sub> = 25°C.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
	Open circuit detection					
$V_{LG(OC)}$	Load ground threshold voltage	$V_{BG} \ge 9 \text{ V}$	1.5	2.5	3.5	V
I <sub>B(OC)</sub>	Supply quiescent current per OC channel	$V_{BG} = V_{LG} = 16 \text{ V}$ open circuit detected, other channel off	-	0.8	1.5	mA
-I <sub>L(OC)</sub>	Load ground current per channel	$V_{LG} = 16 \text{ V}$ $V_{LG} = 3.5 \text{ V}$	- -	200 22	300 40	μ <b>Α</b> μ <b>Α</b>
$t_{d(OC)}$	Status delay time	input low to status low	-	65	100	μs
R <sub>ext</sub>	Application information  External load pull-up resistance per channel	$V_{\text{ext}} = 5 \text{ V}$	-	10	-	kΩ

PIP3207-DC

#### **UNDERVOLTAGE & OVERVOLTAGE CHARACTERISTICS**

Limits are at -40  $^{\circ}$ C  $\leq$  T<sub>mb</sub>  $\leq$  150  $^{\circ}$ C and typicals at T<sub>mb</sub> = 25  $^{\circ}$ C. Refer to TRUTH TABLE.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
	Undervoltage					
$V_{\text{BG(UV)}}$	Low supply threshold voltage <sup>1</sup>		2	4.2	5.3	٧
$\Delta V_{\text{BG(UV)}}$	Hysteresis		0.1	0.5	1	٧
	Overvoltage					
$\begin{matrix} V_{\text{BG(OV)}} \\ \Delta V_{\text{BG(OV)}} \end{matrix}$	High supply threshold voltage <sup>2</sup> Hysteresis		35 0.4	40 1	45 2	V V
$I_{BG(OV)}$	Operating current per channel	$V_{BG} > V_{BG(OV)}$	-	1	2	mA

#### **OVERLOAD PROTECTION CHARACTERISTICS**

Independent protection per channel. Refer to TRUTH TABLE.

 $5.5~V \le V_{BG} \le 35~V$ , limits are at  $-40~C \le T_{mb} \le 150~C$  and typicals at  $T_{mb} = 25~C$  unless otherwise stated.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
	Overload protection	$V_{BL} = V_{BG}$ ; $t_p = 300 \ \mu s$				
I <sub>L(lim)</sub>	Load current limiting	$V_{BG} \ge 8 \text{ V}$	18	30	42	Α
		$V_{BG} = 5.5 \text{ V}$	15	27	42	Α
	Short circuit load protection	T <sub>mb</sub> ≤ 125°C prior to overload³				
P <sub>D(TO)</sub>	Overload power threshold	for protection <sup>4</sup>	100	150	200	W
T <sub>DSC</sub>	Characteristic time	which determines trip time <sup>5</sup>	-	200	500	μs
	Overtemperature protection					
$T_{j(TO)}$	Threshold junction temperature		150	170	190	°C
$\Delta T_{j(TO)}$	Hysteresis <sup>6</sup>		3	10	20	°C

<sup>1</sup> Undervoltage sensors causes each channel to switch off and reset.

<sup>2</sup> Overvoltage sensors causes each output channel to switch off to protect its load.

<sup>3</sup> Above this temperature measurement of these parameters is prevented because OT protection may occur prior to SC protection.

<sup>4</sup> Normal operation will be resumed when  $P_D < P_{D(TO)}$  and  $T_j < T_{j(TO)}$ .

 $<sup>\</sup>textbf{5} \text{ Trip time } t_{d\,sc} \text{ varies with overload dissipation } P_{D} \text{ according to the } \textit{exponential model} \text{ formula } t_{d\,sc} \approx T_{DSC} \text{ / LN[ } P_{D} \text{ / } P_{D(TO)} \text{ ]}.$ 

<sup>6</sup> After cooling below the reset temperature the channel will resume normal operation.

PIP3207-DC

#### STATUS CHARACTERISTICS

The status output is an open drain transistor, and requires an external pull-up circuit to indicate a logic high. Limits are at -40  $^{\circ}$ C  $\leq$  T<sub>mb</sub>  $\leq$  150  $^{\circ}$ C and typicals at T<sub>mb</sub> = 25  $^{\circ}$ C unless otherwise stated. Refer to TRUTH TABLE.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
$V_{SG}$	Status clamping voltage	I <sub>S</sub> = 100 μA	5.5	7	8.5	V
$V_{SG(LO)}$	Status low voltage	I <sub>S</sub> = 100 μA	-	0.7	0.9	V
		$I_{S} = 250 \mu\text{A}$	-	-	1.1	V
Is	Status leakage current	$V_{SG} = 5 \text{ V}$	-	-	10	μΑ
		$T_{mb} = 25^{\circ}C$	-	0.1	1	μΑ
I <sub>S(SAT)</sub>	Status saturation current <sup>1</sup>	V <sub>SG</sub> = 5 V	5	10	15	mA
	Application information					
R <sub>s</sub>	External pull-up resistor		-	47	-	kΩ

#### **KEY TO ABBREVIATIONS**

L logic low
H logic high
OV overvoltage
X don't care
O condition not present
1 condition present
O UV undervoltage
OV overvoltage
SC open circuit
SC short circuit
OT overtemperature

<sup>1</sup> For example with the pull-up resistor short circuited while the status transistor is conducting. This condition should be avoided in order to prevent possible interference with normal operation of the device.

PIP3207-DC

## **SWITCHING CHARACTERISTICS**

 $T_{mb}$  = 25 °C,  $V_{BG}$  = 13 V, for resistive load  $R_L$  = 13  $\Omega$  per channel.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
	During turn-on	from input going high				
t <sub>d on</sub>	Delay time	to 10% V <sub>L</sub>	-	30	-	μs
dV/dt <sub>on</sub>	Rate of rise of load voltage	30% to 70% V <sub>L</sub>	0.5	1	2	V/μs
t on	Total switching time	to 90% V <sub>L</sub>	-	100	400	μs
	During turn-off	from input going low				
t <sub>d off</sub>	Delay time	to 90% V <sub>L</sub>	-	20	-	μs
dV/dt <sub>off</sub>	Rate of fall of load voltage	70% to 30% V <sub>L</sub>	0.5	1	2	V/μs
t off	Total switching time	to 10% V <sub>L</sub>	-	40	200	μs

## **CAPACITANCES**

 $T_{mb} = 25$  °C; f = 1 MHz;  $V_{IG} = 0$  V

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
$C_{sg}$	Status capacitance	$V_{SG} = 5 \text{ V}$	-	11	15	pF
	per channel					
C <sub>ig</sub>	Input capacitance	$V_{BG} = 13 \text{ V}$	-	15	20	pF
C <sub>bl</sub>	Output capacitance	V <sub>BL</sub> = 13 V	-	265	375	pF

DATA SHEET STATUS				
DATA SHEET STATUS <sup>1</sup>	PRODUCT STATUS <sup>2</sup>	DEFINITIONS		
Objective data	Development	This data sheet contains data from the objective specification for product development. Philips Semiconductors reserves the right to change the specification in any manner without notice		
Preliminary data	Qualification	This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in ordere to improve the design and supply the best possible product		
Product data	Production	This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Changes will be communicated according to the Customer Product/Process Change Notification (CPCN) procedure SNW-SQ-650A		

#### Limiting values

Limiting values are given in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

#### Application information

Where application information is given, it is advisory and does not form part of the specification.

#### © Philips Electronics N.V. 2001

All rights are reserved. Reproduction in whole or in part is prohibited without the prior written consent of the copyright owner.

The information presented in this document does not form part of any quotation or contract, it is believed to be accurate and reliable and may be changed without notice. No liability will be accepted by the publisher for any consequence of its use. Publication thereof does not convey nor imply any license under patent or other industrial or intellectual property rights.

#### LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices or systems where malfunction of these products can be reasonably expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.

<sup>1</sup> Please consult the most recently issued datasheet before initiating or completing a design.

<sup>2</sup> The product status of the device(s) described in this datasheet may have changed since this datasheet was published. The latest information is available on the Internet at URL http://www.semiconductors.philips.com.
