### DESCRIPTION

The PL600-27T is a low cost XO IC, designed to replace multiple XO solutions saving the cost and board space of clock distribution buffers. In addition, it provides among the lowest current on the market for the 10MHz to 52MHz range. The PL600-27T accepts crystal and clock inputs from 10 to 52MHz (fundamental resonant mode crystal) and provides low phase noise (<math> < -130\text{dBc}</math> at 10kHz offset at 30MHz), and very low jitter (2.5 ps RMS period jitter) outputs.

### LAYOUT RECOMMENDATIONS

The following guidelines are to assist you with a performance optimized PCB design:

#### Signal Integrity and Termination Considerations

- Keep traces short!
- Trace = Inductor. With a capacitive load this equals ringing!
- Long trace = Transmission Line. Without proper termination this will cause reflections ( looks like ringing ).
- Design long traces (> 1 inch) as “striplines” or “microstrips” with defined impedance.
- Match trace at one side to avoid reflections bouncing back and forth.

#### Decoupling and Power Supply Considerations

- Place decoupling capacitors as close as possible to the VDD pin(s) to limit noise from the power supply
- Multiple VDD pins should be decoupled separately for best performance.
- Addition of a ferrite bead in series with VDD can help prevent noise from other board sources
- Value of decoupling capacitor is frequency dependant. Typical values to use are 0.1 $\mu$ F for designs using frequencies < 50MHz and 0.01 $\mu$ F for designs using frequencies > 50MHz.

#### Typical LVCMOS termination

Place Series Resistor as close as possible to LVCMOS output

#### Crystal Tuning Circuit

Series and parallel capacitors used to fine tune the crystal load to the circuit load.

**CST** - Series Capacitor, used to lower circuit load to match crystal load. Raises frequency offset. This can be eliminated by using a crystal with a Cload of equal or greater value than the oscillator.

**CPT** - Parallel Capacitors, Used to raise the circuit load to match the crystal load. Lowers frequency offset.
