

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Technical Data Sheet

Photo link Light Receiver Unit

PLR135

Features

1. High PD sensitivity optimized for red light
2. Data : NRZ signal
3. Low power consumption for extended battery life
4. Built-in threshold control for improved noise Margin
5. Good ESD protection: up to 8KV
6. Pb Free
7. Receiver sensitivity: up to -27dBm (Min. for 16Mbps)
up to -21dBm (Min. for 25Mbps)
8. The product itself will remain within RoHS compliant version.

Descriptions

The optical receiver is packaged with custom optic data link interface, integrated on a proprietary CMOS PDIC process.

The unit functions by converting optical signals into electric ones.

The unit is operated at 2.4 ~ 5.5 V and the signal output interface is TTL compatible with high performance at low power consumption.

Applications

1. Digital Optical Data-Link
2. Dolby AC-3 Digital Audio Interface

Package Dimensions

Pin Function

- ① : V_{out}
- ② : GND
- ③ : V_{cc}

- Notes:**
- All dimensions are in mm.
 - General Tolerance: Pin length tolerance is ± 0.25 mm
others are ± 0.10 mm

Absolute Maximum Ratings(Ta = 25 °C)

| Parameter | Symbol | Rating | Unit |
|-----------------------|--------|-------------|------|
| Supply Voltage | Vcc | -0.5 ~ +5.5 | V |
| Output Voltage | Vout | Vcc +0.3 | V |
| Storage Temperature | Tstg | -40 to 85 | °C |
| Operating Temperature | Topr | -20 to 70 | °C |
| Soldering Temperature | Tsol | 260* | °C |

* Soldering time ≤ 10 s.

Electro-Optical Characteristics(Ta=-20~70°C, Vcc=3V)

Application Notes: PLR135 Series PCB layout for motherboard integration

To achieve better jitter and low input optical power performances, several PCB layout guidelines must be followed. These guidelines ensure the most reliable PLR135 POF performance for the motherboard integration. Failed to implement these PCB guidelines may affect the PLR135 jitter and low input power performances.

1. Careful decoupling of the power supplies is very important. Place a 0.1uf surface mount (size 805 or smaller) capacitor as close as (less than 2cm) to the POF Vdd and Gnd leads. The 0.1uf act as a low impedance path to ground for any stray high frequency transient noises.
2. To reduce the digital noises form the digital IC on the motherboard, the planar capacitance formed by an isolated Vcc and Gnd planes is critical. The POF device must be mounted directly on these two planes to reduce the lead parasitic inductance.
3. The isolated Vdd and Gnd planes must be connected to the main Vcc and Gnd (digital) planes at a single point using ferrite beads. The beads are used to block the high frequency noises from the digital planes while still allowing the DC connections between the planes
