

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

POW-R-PAKTM 300A / 600V 3 phase IGBT Assembly

Description:

The Powerex POW-R-PAKTM is a configurable IGBT based power assembly that may be used as a converter, chopper, half or full bridge, or three phase inverter for motor control, power supply, UPS or other power conversion applications.

The power assembly is mounted on a forced air-cooled heatsink and features state-of-the-art Powerex F-series trench gate IGBTs with low conduction and switching losses for high efficiency operation. The POW-R-PAKTM includes a low inductance laminated bus structure, optically isolated gate drive interfaces, isolated gate drive power supplies, and a DC-link capacitor bank. The control board provides a simple user interface along with built-in protection features including overvoltage, undervoltage lockout, overcurrent, overtemperature, and short circuit detection.

Depending on application characteristics the POW-R-PAK[™] is suitable for operation with DC bus voltages up to 400VDC and switching frequencies above 20kHz.

Schematic

Features:

- High performance IGBT inverter bridge
- Integrated gate drive with fault monitoring & protection
- System status / troubleshooting LEDs to verify or monitor proper operation
- Isolated gate drive power supplies
- Low inductance laminated bus
- Output current measurement & feedback
- Superior short circuit detection & shoot through prevention

	26	I _{out} Phase C	Analog voltage representation of phase C output current

Notes:

- Open collectors can be pulled up to 30 V max and sink 50mA continuous. Do not connect a 15 VDC and 24 VDC source to the unit at the same time, use one or the other. GND signals to be used for analog feedback signals, i.e. twisted pair with I_{out} Phase A.

Gate Drive Board Interface Connector

Description	Symbol	Туре	Manufacturer
Gate Drive Board Interface Header	J1	0.100" x 0.100" latching header, 26 pin	3M# 3429-6002 or equivalent
