

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**SERIES:** PQA50-D | **DESCRIPTION:** DC-DC CONVERTER

**FEATURES**

- up to 50 W isolated output
- 2:1 input range (18~36 Vdc, 36~75 Vdc)
- smaller package
- single, regulated output
- 1,500 Vdc isolation
- short circuit, over current, input under voltage protection
- remote on/off
- operating temperature range (-40~85°C)
- six sided metal shielding
- efficiency up to 93%

Cin	220 $\mu$ F, ESR $<$ 1.0 $\Omega$ at 100 kHz

Note: 1. Input reflected-ripple current is measured with an inductor Lin and Capacitor Cin to simulate source impedance.

## APPLICATION NOTES

### 1. Requirement on output load

To ensure this module can operate efficiently and reliably, the minimum output load cannot be less than 5% of the full load during operation. If the actual output power is small, please connect a resistor at the output end in parallel to increase the load.

### 2. Recommended circuit

This series has been tested according to the following recommended testing circuit before leaving the factory. This series should be tested under load (see Figure 3). If you want to further decrease the input/output ripple, you can increase capacitance properly or choose capacitors with low ESR (see table 3). However, the capacitance must not exceed the maximum capacitive load or a start-up problem might arise (see table 4).

Figure 3

Table 3

Vout (Vdc)	Cin (μF)	Cout (μF)
3.3	100	220
5	100	220
12	100	100
15	100	100
24	100	47

### 3. Output Voltage Trimming

Leave open if not used.

Figure 4

Application Circuit for Trim Pin  
(part in broken line is the interior of models)

Formula for Trim Resistor

$$\text{up: } R_T = \frac{aR_2}{R_2 - a} - R_3 \quad a = \frac{V_{ref}}{V_o' - V_{ref}} \cdot R_1$$

$$\text{down: } R_T = \frac{aR_1}{R_1 - a} - R_3 \quad a = \frac{V_o' - V_{ref}}{V_{ref}} \cdot R_2$$

Note: Value for R1, R2, R3, and Vref (see Table 5)

R<sub>T</sub>: Trim Resistor

a: User-defined parameter, no actual meanings

Vo': The trim up/down voltage

Table 5

Vout (Vdc)	R1 (kΩ)	R2 (kΩ)	R3 (kΩ)	Vref (V)
3.3	4.788	2.87	15	1.24
5	2.87	2.87	12.1	2.5
12	11	2.87	22	2.5
15	15	3	22	2.5
24	20	2.308	15	2.5

Notes: 1. Minimum load shouldn't be less than 5%, otherwise ripple may increase dramatically. Operation under minimum load will not damage the converter, however, they may not meet all specifications listed.  
2. Maximum capacitive load is tested at input voltage range and full load.  
3. All specifications are measured at Ta=25°C, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
