

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DESCRIPTION

The PQC250 series switching power supplies utilize advanced component and circuit technologies to deliver high efficiency and low power dissipation in both operational and standby operation in a compact 3.0" x 5.0" x 1.40" package. Designed for medical, computing, communications, telecom, industrial, consumer, and other OEM applications, deployable in 1U customer systems. All models offer universal AC input capability with active power factor correction (PFC) and compliance to worldwide safety and EMC standards.

ORDERING GUIDE (BASIC MODEL NUMBER)

Model Number	Murata Internal Part#	Natural Convection	Main Output (V1)		Aux Output (V2)	
			Voltage	Current	Voltage	Current
PQC250-12xxx	M1905	250W	12Vdc	20.8A	5V	0.5A
PQC250-15xxx ¹	M1947		15Vdc	16.6A		
PQC250-18xxx ¹	M1948		18Vdc	13.8A		
PQC250-24xxx	M1937		24Vdc	10.4A		
PQC250-28xxx ¹	M1946		28Vdc	8.9A		
PQC250-36xxx	M1938		36Vdc	6.9A		
PQC250-48xxx	M1939		48Vdc	5.2A		
PQC250-54xxx	M1949		54Vdc	4.6A		

¹ Consult with factory for availability

FEATURES

- IEC60601 Ed.3 medical (2 x MOPP Pri-Sec; 1 x MOPP Pri-Chassis Ground); PQC250-xx Series
- 60950-1 compliant, IEC62368³
- Designed to comply with IEC60601-1 4th Edition EMC Standard Requirements¹
- 250W compact high density; operation to 250W at +50°C
- Very low no load standby power; designed to meet ENERGY STAR[®] Program Requirements for Single Voltage External AC-DC Power Supplies
- True zero load operation of the Main (V1) output; no minimum load requirements
- 3" x 5" industry standard footprint
- Optional DC input capability
- High efficiency 94% typical
- Remote sense, main output
- Universal AC input with active PFC
- Less than 1U high
- RoHS compliant
- Active inrush protection
- Compatibility with MVAC250 Series products^{1,2}
- Droop Current Share option
- Two Year Standard Warranty

¹When deployed in End User Systems)

²Some features of MVAC250 Series not available on this product

³ certification in process

INPUT CHARACTERISTICS

Parameter	Conditions	Min	Nom	Max	Units
Input Voltage AC Operating Range	Single Phase	90	100/240	264	Vac
Input Frequency		47	50/60	63	Hz
Maximum input current	² DC input ¹ refer to: Part Number Options Guide	127		300	Vdc
	Vin = 115Vac; Full Load		2.5		Arms
	² Vin = 127-300Vdc			2.7	A
Inrush Current	² Vin = 260-400Vdc			1.5	A
	230Vac, Cold start, 25°C;		30		Apk
Power Factor	At 115Vac, full load	0.95			W/WA
Hold-up Time	90Vac; Full Load	16			msec
	20% Full Load		88.5		
Efficiency @ 230VAC for PQC250-48 model.	50% Full Load		94		%
	100% Full Load		95		
	No Load Input Power Consumption (PS_ON = OFF; Aux (V2) = 0A)			<0.5W	W

¹ Consult with factory for details and availability

² Medical certification applies to AC input models only.

OUTPUT CHARACTERISTICS

Parameter	Conditions	Min	Nom	Max	Units
Line, Load Regulation	Main (V1) Output ¹			±1	%
	Aux (V2) Output			±5	
Minimum Load Capability	Stable Operation	0			A
Output Ripple	Zero to Full Load ²			120	mVp-p

¹ zero load output regulation will increase by up to +10% of nominal set point voltage for all models. 200mA min. load current is required to keep output voltage within ±1%.

² Ripple and noise are measured with 0.1uF ceramic capacitor and 10uF tantalum capacitor. A short coaxial cable with 50 ohm termination is used.

MAIN OUTPUT CHARACTERISTICS (ALL MODELS)

Parameter	Conditions	Typ.	Max.	Units
Transient Response ¹	50% load step, 1A/µsec slew rate and min 0.1A load		± 5	%
Settling Time to 1% of Nominal			500	µsec
Turn On Delay	After application of input power		3	sec
Output Voltage Rise	Monotonic		50	msec
Remote Sense	Compensates for up to 120mV of total lead drop (output and return connections) with remote sense connected. Protected against short circuit and reverse connection.		120	mV

¹ Min. 1 second time between consecutive transients.

AUXILIARY OUTPUT CHARACTERISTICS (ALL MODELS)

Auxiliary Output	Aux Output Voltage	Load Current	Load Capacitance	Line, Load, Cross Regulation	Ripple Voltage & Noise
Aux (V2)	5V	0 to 0.5A	0 to 220µF	± 5%	120mVp-p

CB Test Certificate and Test Reports available upon request

Pending Certification

Fuses	Dual Fuses; Line and Neutral; 6.3A Time Lag; 250V				
Outside Dimensions	3.0" x 5.0" x 1.44" (76.2mm x 127mm x 35.2mm) nominal				
Weight (typ.)	0.352/0.78				kg/lbs

¹ Certification in process

² 3000 M max. altitude for Medical applications

PROTECTION CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max.	Units
Over Voltage Protection	V1 (main output) latching	115		140	%
	V2 (aux output) latching	5.5		7.5	V
Over Current Protection	V1, hiccup mode	120		150	%Amax
	V1, latch mode	160		Short circuit	
	V2, auto-recovery	110		150	
Over Temperature Protection	Auto-recovery		Complies		
Remote Sense Short Circuit Protection			Complies		
Remote Sense Reverse Connection Protection			Complies		

ISOLATION CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max.	Units
Isolation	Primary to Chassis	1500			Vac
	Primary to Secondary (2xMOPP)	4000			
	Secondary to Chassis	1500			
	Output to Output	1500			
Earth Leakage Current (under single fault condition)	264Vac, 60Hz, 25°C		300		µA
Earth Leakage Current (under normal conditions)	264Vac, 60Hz, 25°C		150		µA

CURRENT SHARING OPTION – PQC250X1

Model Number	Description
PQC250-XXD	<p>Main Output: Current share is achieved using the droop method. Nominal output voltage is achieved at 50% load and output voltage increases/drops with a total of ±5% of nominal voltage.</p> <p>Startup of parallel power supplies is not internally synchronized. If more than 250W combined power is needed, start-up synchronization must be provided by using a common PS_ON signal. To account for ±10% full load current sharing accuracy and the reduction in full load output voltage due to droop, available output power must be derated by 15% when units are operated in parallel. Current sharing can be achieved with or without remote sense connected to the common load.</p> <p>If ORing protection is desired, please contact Murata sales for external ORING FET board or external ORING MOSFET reference circuit design (also see Applications Note ACAN-XX).</p> <p>Aux (V2) output can be tied together for redundancy but total combined output power must not exceed 2.5W, external ORing devices are recommended to preserve redundancy.</p>

EMISSIONS AND IMMUNITY		
Characteristic	Standard	Compliance
Input Current Harmonics	IEC/EN 61000-3-2	Class A
Voltage Fluctuation and Flicker	IEC/EN 61000-3-3	Complies
Conducted Emissions	EN 55022	Class B
	FCC Part 15	Class B
Radiated Emissions	CISPR 22 -3 meter	Class B
	FCC 15.109 - 3 meter	Class B
ESD Immunity	IEC/EN 61000-4-2	Level 4, Criterion 2
Radiated Field Immunity	IEC/EN 61000-4-3	Level 3, Criterion A
Electrical Fast Transient Immunity	IEC/EN 61000-4-4	Level 4, Criterion A
Surge Immunity	IEC/EN 61000-4-5	Level 3, Criterion A (Com. Mode: 2kV 12 OHM, Diff. Mode: 1kV, 2 OHM)
Radiated Field Conducted Immunity	IEC/EN 61000-4-6	Level 3, 10V/m, Criterion A
Magnetic Field Immunity	IEC/EN 61000-4-8	Level 3, Criterion A
Voltage dips, interruptions	IEC/EN 61000-4-11	Level 3, Criterion B

EMI CONSIDERATIONS

For optimum EMI performance, the power supply should be mounted to a metal plate grounded to all 4 mounting holes of the power supply. To comply with safety standards, this plate must be properly grounded to protective earth (see mechanical dimension notes). Pre-compliance testing has shown the stand-alone power supply to comply with EN55022 class B radiated emissions with a metal enclosure. A small common mode choke is required at the output cable to meet class B. Contact Murata for details. Radiated emission results vary with system enclosure and cable routing paths.

SAFETY CONSIDERATIONS

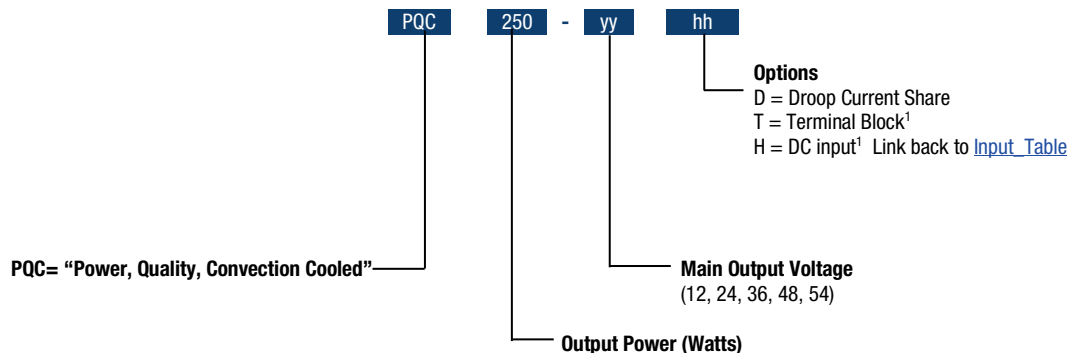

1. This power supply is a component level power supply intended for use in Class I or Class II applications. Secondary ground traces need to be suitably isolated from primary ground traces when used in Class II applications.
2. When the power supply is used in Class II equipment, all ground traces and components connected to the primary side are considered primary for spacing and insulation considerations.

STATUS AND CONTROL SIGNALS

Parameter	Models	Conditions
PS_ON	All Models	This pin must be pulled low (sink current >2mA) to +5V_AUX_RTN to turn on the main output. The +5V_AUX output is independent of the PS_ON signal, and comes up automatically when the input AC or input DC voltage is applied within their specified operating ranges.
PWR_OK	All Models	Open collector logic goes high 40-100ms after the main output is within regulation; it goes low at least 2msecs before loss of regulation. Internal 10K pull up to +5V_Aux is provided. Applications using the PWR_OK signal should maintain a minimum load of 5W on the main output.

PART NUMBER STRUCTURE

THERMAL CONSIDERATIONS

System thermal management is critical to the performance and reliability of the PQC250 series power supplies. Performance derating curves are provided which can be used as a guideline for what can be achieved in a system configuration with controlled airflow at various input voltage conditions.

The product is designed to provide 250W¹ using natural convection cooling when mounted horizontally with un-obstructed convection current airflow flow at room temperature. At elevated temperature the power supply data is taken while it is surrounded by a large vented enclosure to minimize forced cross flows inherent in the elevated temperature test.

The product is capable of operation when mounted in other orientations; operational/derating curves shall be provided to show the effect of such mounting.

The PQC250 Series will also benefit from the provision of forced cooling airflow (generated by an external host system fan). This will enable operation at potentially higher local surrounding ambient temperatures.

¹ Derating curves are provided to indicate operation at varying input voltages with respect to temperature.

Derating Curve vs. Temperature (Unit mounted horizontal with PTH components facing up, natural convection cooled, shown below)

WIRING DIAGRAM FOR OUTPUT

Dotted lines show optional remote sense connections, that can be extended to the Point of Load (POL) which can be some physical distance from the power module output connector (J2). The intent is to compensate for any voltage drop in the cables to the to maintain voltage regulation at the POL .

Note: For parallel (current share) operation it is required to connect the sharing power supplies in parallel (+DC out connected together and DC out Return connected together on sharing power supplies. Since each output has an identical "droop" share characteristic then each output will intrinsically share the total load current.

APPLICATION NOTE

MECHANICAL DIMENSIONS (Nominal) – PQC250-xx

SAFETY CONSIDERATION NOTES:

- Protective bonding conductor from the end product protective earthing terminal must be tied to TB1. For optimum EMI performance, while maintaining Class I safety isolation all 4 mounting holes must be tied to the end product protective earthing terminal. To maintain Class II safety isolation mounting holes MTG1 and MTG2 need to be isolated from protective earth and should use standoffs of non-conductive material.
- This power supply requires mounting standoffs of minimum 6mm in height. If there is risk of chassis deformation or shorter standoff height is required, an appropriate insulator must be used under the power supply with adequate extension beyond the outline of the power supply. In all cases, the applicable safety standards must be applied to ensure proper creepage and clearance requirements are met.
- The primary heatsink is considered a live primary circuit, and should not be touched. It is recommended that the primary heatsink be kept at least 3.5mm from chassis, and 7mm from secondary circuits. In all cases, the applicable safety standards must be applied to ensure proper creepage and clearance requirements are met.
- This product is subject to the following operating requirements and the Life and Safety Critical Application Sales Policy: Refer to: <http://www.murata-ps.com/requirements/>
- Used only in non-tropical conditions.
