Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

CE Conforming to EMC Directive (Excluding **RX2** and **RX4**)

Self-diagnosis | Test input | Interference prevention

Sturdy photoelectric sensor made of die-cast zinc alloy

Robust

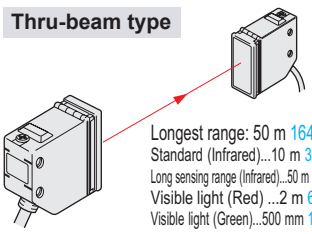
The enclosure is robust as it is made of die-cast zinc alloy.

VARIETIES

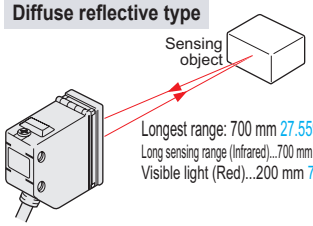
Standard type — RX

Wide variety

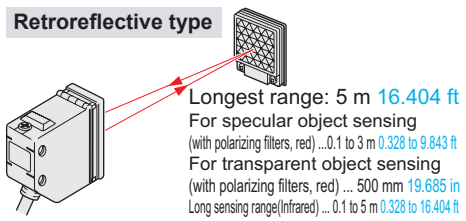
Thru-beam type



Diffuse reflective type



Retroreflective type



DC 2-wire type — RX2

Wiring reduced by 1/3

Wiring can be completed by using only two, instead of three wires.

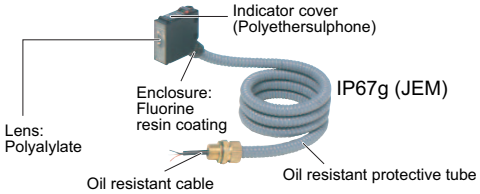
Power supply cost: reduced to 1/30 or less

Current consumption: 1 mA or less
An additional power supply for the sensors is not required.

Heavy duty type — RX4

Durable against oil

This sensor can be used in a harsh environment.



MAINTENANCE

Test input (emission halt input)

Convenient for operation check before start-up.
(Excluding **RX2** types)

FUNCTIONS

Automatic interference prevention function — Retroreflective / diffuse reflective types

Two sensors can be mounted side by side because of the automatic interference prevention function. (Excluding **RX2** types)

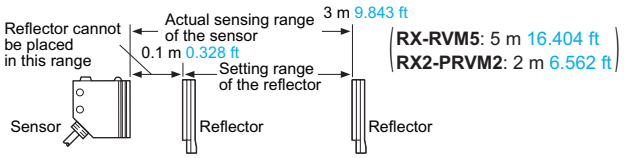
Notes: 1) The sensing range of the retroreflective type sensor is specified for the **RF-230** reflector. Further, the sensing range of **RX-PRVM3**, **RX-RVM5** and **RX2-PRVM2** is the possible setting range for the reflector. The sensor can detect an object less than 0.1 m 0.328 ft away.



2) The model No. with "**P**" shown on the label affixed to the thru-beam type sensor is the emitter, "**D**" shown on the label is the receiver.

ORDER GUIDE

5 m 16.404 ft cable length type

5m 16.404 ft cable length type (standard: 2m 6.562 ft) is also available for **RX** and **RX2** types. (excluding **RX-500G**)
When ordering this type, suffix "**-C5**" to the model No.
(e.g.) 5 m 16.404 ft cable length type of **RX-M10** is "**RX-M10-C5**".

Reflector mounting bracket (Note 1)	**MS-RF21-1**	Protective mounting bracket for **RF-210** It protects the reflector from damage and maintains alignment.	
	MS-RF22	For **RF-220**	
	MS-RF23	For **RF-230**	
Reflective tape (For **RX-RVM5** only)	**RF-T110**	This tape can be used in place of the reflector by cutting it to a suitable size. • Size: 100 × 100 mm 3.937 × 3.937 in • Sensing range: 3 m 9.843 ft (at 50 × 50 mm 1.969 × 1.969 in) (There may be a slight variation depending on the product.)	
Protective tube	**PT-RX500**	Length: 500 mm 19.685 in	Cable is protected from external forces. It does not rust as it is made of stainless steel.
	PT-RX1000	Length: 1,000 mm 39.370 in	
Sensor checker	**CHX-SC2** (Note 2)	It is useful for beam alignment of thru-beam type sensors. The optimum receiver position is given by indicators, as well as an audio signal.	

Notes: 1) Refer to **CX-400** series pages (p.301~) for dimensions of the reflector or the reflector mounting bracket.
2) Refer to p.980 for details of the sensor checker **CHX-SC2**.

Conditions for the load

1) The load should not be actuated by the leakage current (1 mA; 0.8 mA for receiver of thru-beam type sensor) in the OFF state.
2) The load should be actuated by (supply voltage – 4 V) in the ON state.
3) The current in the ON state should be between 5 to 100 mA DC.
   [In case the current is less than 5 mA, connect a bleeder resistance in parallel to the load (shown in dotted line above) so that a current of 5 mA, or more, flows.]

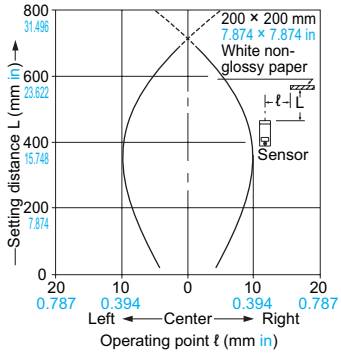
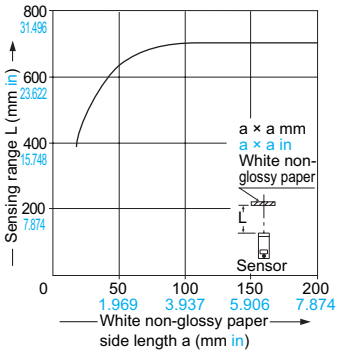
Sensing field



Correlation between sensing object size and sensing range



As the sensing object size becomes smaller than the standard size (white non-glossy paper 200 × 200 mm 7.874 × 7.874 in), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 200 × 200 mm 7.874 × 7.874 in white non-glossy paper is just detectable at a distance of 700 mm 27.559 in.)

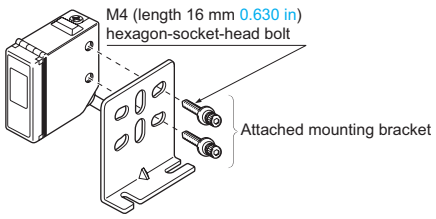
PRECAUTIONS FOR PROPER USE

Refer to p.1458~ for general precautions.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Mounting

- The tightening torque should be 1.17 N·m or less.



Wiring

- The self-diagnosis output does not incorporate a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

Others

- Do not use during the initial transient time (50 ms) after the power supply is switched on.

PRECAUTIONS FOR PROPER USE

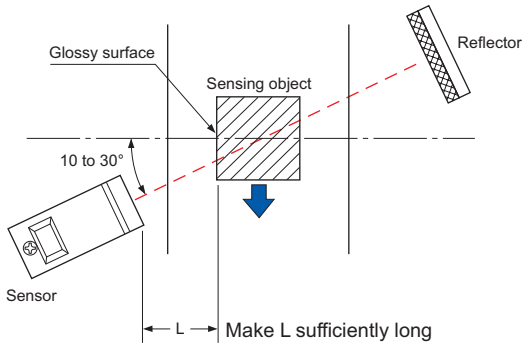
Refer to p.1458~ for general precautions.

RX-RVM5

Glossy object sensing

- Please take care of the following points when detecting materials having a gloss.

①Make L, shown in the diagram, sufficiently long.
②Install at an angle of 10 to 30 degrees to the sensing object.



RX-PRVM3 RX2-PRVM2

Retroreflective type sensor with polarizing filters

- If a shiny object is covered or wrapped with a transparent film such as those described below, the retroreflective type sensor with polarizing filters may not be able to detect it.
  In that case, follow the steps given below.

Example of sensing objects

- Can wrapped by clear film
- Aluminum sheet covered by plastic film
- Gold or silver color (specular) label or wrapping paper

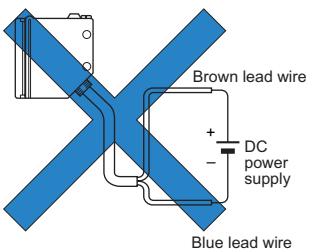
Steps

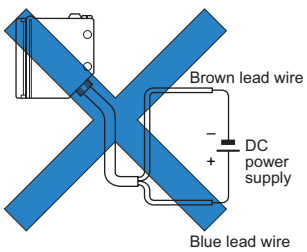
- Tilt the sensor with respect to the sensing object while fitting.
- Reduce the sensitivity.
- Increase the distance between the sensor and the sensing object.

RX2-□

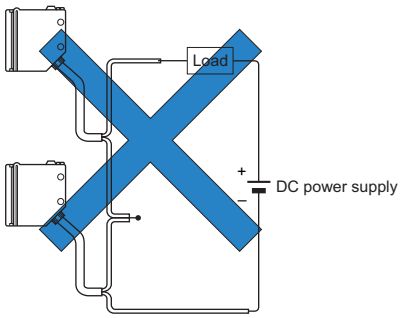
Wiring

- Always connect the sensor to the power supply through a load. If the sensor is connected to the power supply directly, the short-circuit protection makes the sensor inoperable. (The output stays in the OFF state and no indicator lights up.) If this happens, connect the sensor to the power supply through a load.
  Further, note that the sensor will be damaged if the power supply is connected in reverse without a load.

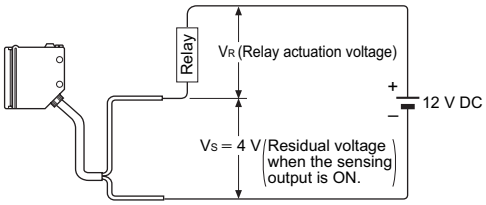




- Do not connect sensors in series (AND circuit).



- The residual voltage of the sensor is 4 V. Before connecting to a relay, be aware of the actuation voltage of the relay. (Not all 12 V relays may be connected as the load.)



RX4-□

Connection of protective tube connector

- Connect the junction connector securely as shown below. The tightening torque should be 0.98 N·m or less.

When mounted with a female screw
