

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

TDMA-Based 3-Player Remote Controller

Features

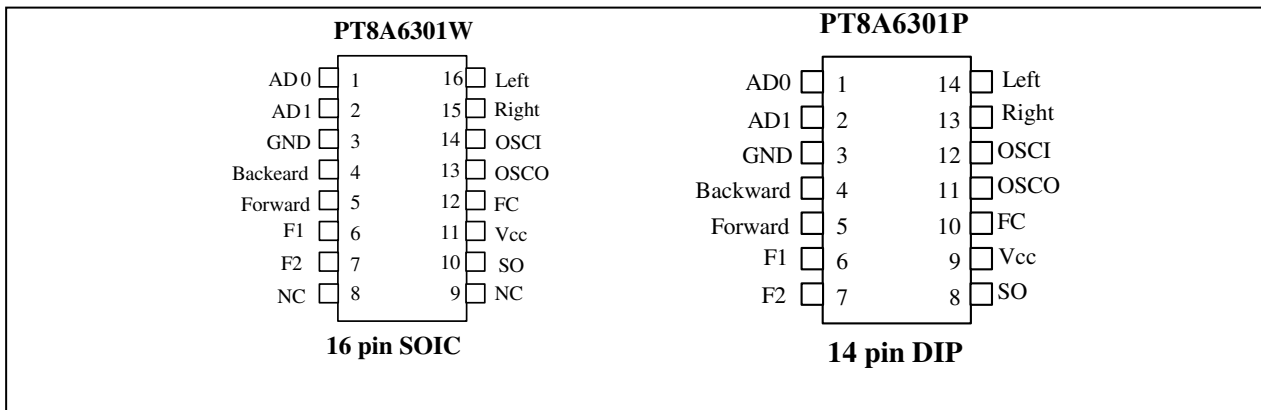

- The PT8A6301 works as the encoder and the PT8A6311 works as the decoder
- Supports three players in the same RF frequency
- CRC check
- On-chip oscillator with external ceramic crystal (6301) and external RC (6311)
- Provide clock output 125kHz
- Internal pull-up resistors for functional input pins
- Very low power supply voltage: 1.0V to 2.6V for PT8A6311
- Few external components needed

Description

The PT8A6301/PT8A6311 provides a simple solution for three transmitters controlling three RC cars in TDMA mode. When 3 controllers transmit code signals, signal occurrence of the 3 players are interlaced in most time because space of adjacent 2 frames is different in 3 transmitters. In Rx section, each PT8A6311 can distinguish its own code signal according to channel ID. Finally the effective codes will be decoded and FORWARD, BACKWARD, RIGHT, LEFT, F1, F2 signals are sent out to drive external device. Additionally the PT8A6311 provides clock output for DC/DC or other function.

Pin Information

Pin Description of PT8A6301

Name	Type	Description
AD0, AD1	I	Address pins: the two pins decide which channel will be selected, they are internally pulled down.
GND	GND	Ground
Backward	I	Backward function input, low active
Forward	I	Forward function input, low active
F1	I	Function 1 input, low active
F2	I	Function 2 input, low active
SO	O	Output pin of the encoding signal
Vcc	P	Power supply
FC	O	Turn on/off 27MHz OSC
OSCO	O	Oscillator output pin
OSCI	I	Oscillator input pin
Right	I	Right function input, low active
Left	I	Left function input, low active
NC	-	No connection

Ambient Temperature with Power Applied.....	0°C to +70°C
Supply Voltage to Ground Potential (Inputs & V _{CC} Only).....	-0.5 to +5.5V
Supply Voltage to Ground Potential (Outputs & D/O Only).....	-0.5 to +5.5V
DC Input Voltage.....	-0.5 to +5.5V
DC Output Current	30mA
Power Dissipation	500mW

Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
