Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Trimmer Potentiometers

SMD Sealed Type Multi-turn Type PVG5/PV01 Series

PVG5 Series

■ Features

1. High resolution resulting from 11-turns design enables precise adjustment.
2. 5mm miniature size lead a high density PCB mounting.
3. Compatible with VPS reflow soldering method.
4. Compatible with ultrasonic cleaning.
5. Clutch mechanism prevents excessive wiper rotation.

■ Applications

1. Measuring instruments 2. sensors
3. CPUs 4. Industrial machines

PVG5/PV01 Series Notice

■ Notice (Operating and Storage Conditions)

1. Store that the temperature is -10 to +40deg. C and the relative humidity is 30-85%RH.
2. Do not store in or near corrosive gases.
3. Use within six months after delivery.
4. Open the package just before using.
5. Do not store under direct sunlight.
6. The trimmer potentiometer should not be used under the following environmental conditions:
   If you use the trimmer potentiometer in an environment other these listed below, please consult with Murata factory representative prior to using.
   (1) Corrosive gaseous atmosphere.
   (Ex. Chlorine gas, Hydrogen sulfide gas, Ammonia gas, Sulfuric acid gas, Nitric oxie gas, etc.)
   (2) In liquid.
   (Ex. Oil, Medical liquid, Organic solvent, etc.)
   (3) Dusty/dirty atmosphere.
   (4) Direct sunlight.
   (5) Static voltage nor electric/magnetic fields.
   (6) Direct sea breeze.
   (7) Other variations of the above.

■ Notice (Rating)

1. When using with partial load (rheostat), minimize the power depend on the resistance value.
2. The maximum input voltage to a trimmer potentiometer should not exceed (P•R)^1/2 or the maximum operating voltage, whichever is smaller.
3. The maximum input current to a trimmer potentiometer should not exceed (P/R)^1/2 or the allowable wiper current, whichever is smaller.

■ Notice (Soldering and Mounting)

1. Soldering
   (1) Standard soldering condition
   (a) Reflow and flow soldering :
   Refer to the standard temperature profile.
   (b) Soldering iron :
   >Temperature of tip 260 deg.C max.
   >Soldering time 3sec. max.
   >Diameter 2mm dia. max.
   >Wattage of iron 30W max.
   Before using other soldering conditions than those listed above, please consult with Murata factory representative prior to using. If the soldering conditions are not suitable, e. g., excessive time and/or excessive temperature, the trimmer capacitor may deviate from the specified characteristics.
   (2) Can not be soldered using the flow soldering method. If you use the flow soldering method, the trimmer potentiometer may not function.
   (3) The soldering iron should not come in contact with the case of the trimmer potentiometer. If such contact does occur, the trimmer potentiometer may be damaged.
   (4) Insufficient amounts of solder can lead to insufficient soldering strength on PCB. Excessive amounts of solder may cause the bridging between the terminals.
2. Mounting
   (1) Use our standard land dimension. Excessive land area causes displacement due to effect of the surface tension of the solder. Insufficient land area leads to insufficient soldering strength of the chip.
   (2) Do not apply excessive force (preferable 9.8N (Ref.; 1kgf) max.), when the trimmer potentiometer is mounted to the PCB.
   (3) Do not warp and/or bend PC board to prevent trimmer potentiometer from breakage.
   (4) In chip placers, the recommended size of the cylindrical pick-up nozzle should be outer dimension 4.0mm dia. and inner dimension 2.0mm dia..
3. Cleaning
   (1) Isopropyl-alcohol and Ethyl-alcohol are applicable solvent for cleaning. If you use any other types of solvents, please consult with Murata factory representative prior to using.
   (2) The total cleaning time by cold dipping, vaper and ultrasonic washing (conditions as below) method shall be less than 3 minutes.
   (3) For ultra-sonic cleaning, the available condition is as follows.
   >Power : 600W (67liter) max.
   >Frequency : 28kHz
   >Temperature : Ambient temperature
   Due to the ultra-sonic cleaning equipment peculiar self resonance point and the cleaning compatibility usually depends on the jig construction and/or the cleaning condition such as the depth of immersion, please check the

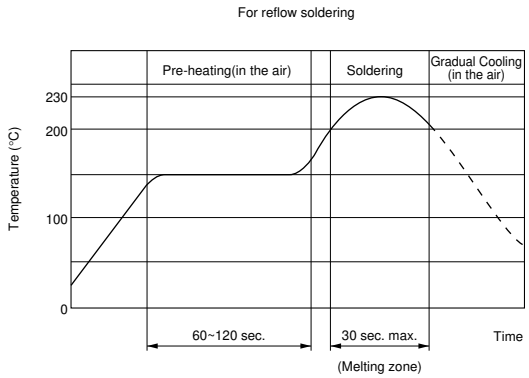
Continued on the following page.

PVG5/PV01 Series Notice

Continued from the preceding page.

cleaning equipment to determine the suitable conditions.
If the trimmer potentiometer is cleaned by other conditions, the trimmer potentiometer may be damaged.

■ Reflow Soldering Standard Profile



■ Notice (Handling)

1. Use suitable screwdrivers that fit comfortably in driver slot.We recommend the below screwdrivers.
   * Recommended screwdriver for manual adjustment
   <PVG5 series>
   VESSEL MFG. : NO. 9000-1.3x30
   (Murata P/N : KMDR130)
   <PV01 series>
   VESSEL MFG. : NO. 9000-1.8x30
   (Murata P/N : KMDR110)
   We can supply above screwdrivers.
   If you place order, please nominate Murata P/N.
2. Don't apply more than 9.8N (Ref.; 1kgf) of twist and stress after mounted onto PCB to prevent contact intermittence. If excessive force is applied, the trimmer potentiometer may not function.
3. When adjusting with a screwdriver, do not apply excessive force (preferable 4.9N (Ref; 500gf) max.)
4. When using a lock paint to fix slot position, please use adhesive resin without chlorine or sulfur (Three-bond "1401series").

■ Notice (Other)

1. Please make sure that your product has been evaluated and confirmed against your specifications when our product is mounted to your product.
2. Murata connot guarantee trimmer potentiometer integrity when used under conditions other than those specified in this document.

SMD Sealed Type/Lead Sealed Type Specifications and Test Methods

The following describes trimmer potentiometer testing conducted by Murata Manufacturing Co., Ltd. in accordance with MIL-R-22097 (Military specification for variable resistors, non-wirewound) and MIL-STD-202 (Test methods for electronic and electrical component parts).

No.	Item	Test Methods
1	**Total Resistance**	Measure total resistance between the resistance element and terminals (#1 and #3) with the contact arm positioned against a stop. The positioning of the contact arm and terminal shall be the same for subsequent total resistance measurements on the same device. Use the test voltage specified in Table-1 for total resistance measurements. This voltage shall be used for all subsequent total resistance measurements.
2	**Residual Resistance**	Position the contact arm at the extreme counterclockwise limit of mechanical travel and measure the resistance between the contact arm and the corresponding end terminal. Then, position the contact arm at the extreme clockwise limit of mechanical travel and measure the resistance between the contact arm and the corresponding end terminal. During this test, take suitable precautions to ensure that the rated current of the resistance element is not exceeded.
3	**Contact Resistance Variation**	Contact resistance variation shall be measured with the measuring circuit shown in Figure-1, or its equivalent. The adjustment rotor (screw) shall be rotated in both directions through 90% of the actual effective-electrical rotational angle(number of turns) for a total of 6 cycles. Only the last 3 cycles shall count in determining whether or not a contact resistance variation is observed at least twice in the same location, exclusive of the roll-on or roll-off points where the contact arm moves from the termination, on or off, the resistance element. The rate of rotation of the adjustment rotor (screw) shall be such that the adjustment rotor (screw) completes 1 cycle for 5 seconds minimum to 2 minutes maximum. The test current used shall follow the value given in Table-2 unless otherwise limited by power rating.
4	**Temperature Coefficient of Resistance**	The trimmer potentiometer shall be subjected to the following each temperature (see Table-3) for 30-45 minutes. Temperature coefficient of resistance shall be applied to the following formula.
5	**Voltage Setting Stability**	The wiper shall be set at approximately 40% of the actual effective-electrical rotational angle (number of turns). An adequate DC test potential shall be applied between the terminal #1 and the terminal #3. The voltage between the terminal #1 and the terminal #3, and the voltage between the terminal #1 and the terminal #2, shall be measured and applied to the following formula.

Total resistance, Nominal (ohm)	Maximum Test Voltage (V)
10≦R≦100	1.0
100<R≦1k	3.0
1k<R≦10k	10.0
10k<R≦100k	30.0
100k<R	100.0

Table-1 Total resistance test voltage

Standard total resistance R (ohm)	Test current
R≦100	20mA
100<R<500	10mA
500≦R<1k	4mA
1k≦R<2k	2mA
2k≦R<50k	1mA
50k≦R<200k	200μA
200k≦R<1M	100μA
1M≦R<2M	50μA
2M≦R	30μA

Table-2 Test current for CRV
