imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Changing the time setting

• It is possible to use the up and down keys to change the time setting even during timer delay.

However, attention should be paid to the following.

When the time setting is shorter than the elapsed time, and timer delay is set in the plus direction, the time setting will return to "0" after the timer delay reaches full-scale, timer delay will be performed up to the changed time setting, and time up will be reached.
 When timer delay is set in the minus direction, timer delay will be performed up to "0" regardless of the time, even if the time setting is shorter than the elapsed time, and time up will be reached.

Specifications

Type				QM4H-S	QM4H-G			
	Rated operating	g voltage	12 to 48 V AC/DC and 100 to 240 V AC/DC					
	Rated power	12 to 48 V AC/DC	During time delay	12 V DC, 48 V DC: Max. 1.5W 12 V AC, 48 V AC: Max. 3.0 VA	During time delay	12 V DC, 48 V DC: Max. 1.0W 12 V AC, 48 V AC: Max. 2.0 VA		
			After time delay	12 V DC, 48 V DC: Max. 2.5W 12 V AC, 48 V AC: Max. 5.0 VA	After time delay	12 V DC, 48 V DC: Max. 1.5W 12 V AC, 48 V AC: Max. 3.5 VA		
	consumption	100 to 240 V AC/DC	During time delay	100 V DC, 240 V DC: Max. 1.5W 100 V AC, 240 V AC: Max. 3.0 VA	During time delay	100 V DC, 240 V DC: Max. 1.0W 100 V AC, 240 V AC: Max. 2.5 VA		
			After time delay	100 V DC, 240 V DC: Max. 2.0W 100 V AC, 240 V AC: Max. 4.0 VA	After time delay	100 V DC, 240 V DC: Max. 1.8W 100 V AC, 240 V AC: Max. 3.2 VA		
	Rated frequency		50/60 Hz common (at AC)					
	Rated control c	Rated control capacity		5 A, 250V AC (resistive load)				
	Time range		0.0	1s to 9990h, Selection of 8 range: 0	0.01s/0.1s/1s/	0.1min/1min/0.1h/1h/10h		
	Operation mod	e		Power ON delay	Power ON delay (with reset and stop terminals)			
	Min. input signa	al width		<u> </u>	20ms (Reset and Stop inputs)*4			
	Operating time fluctuation		±(0.01%+0.05s) in case of power on start					
Time	Temperature er	ror	±(0.005%+0.03s) in case of input reset start*2 (Operating voltage: 85 to 110% V					
accuracy*1 Setting error					C +14 to 131°F (20°C 68°F)			
	Voltage error		Stopped time: 0.1 sec to 1 h

Contact material		Silver alloy						
1.16 +0	Mechanical (contact)		Min. 10 ⁷					
Life*3	Electrical (conta	act)	Min. 10⁵ (at rated control vltage)					
	Allowable opera	ating voltage range	85 to 110% of rated operating voltage					
	Breakdown voltage (Initial value)		Between live and dead metal parts, between input and output, between contact sets, between contacts Min. 100 MΩ (at 500 V DC megger)					
Electrical	Insulation resistance (Initial value)		Between live and dead metal parts: 2, 000 Vrms for 1 min Between input and output: 2, 000 Vrms for 1 min Between contact sets: 2, 000 Vrms for 1 min Between contacts: 1, 000 Vrms for 1 min					
	Reset time		Max. 0.1s					
	Vibration	Functional	10 to 55 Hz: 1 cycle/min. single amplitude of 0.25 mm .010 inch (10 min on 3 axes)					
Mechanical	resistance	Destructive	10 to 55 Hz: 1 cycle/min. single amplitude of 0.375 mm .015 inch (1h on 3 axes)					
Mechanical	Shock	Functional	98 m/s ² (4 times on 3 axes)					
	resistance Destructive		980 m/s ² (5 times on 3 axes)					
One and the se	Ambient temperature		-10°C to 55°C +14°F to +131°F					
Operating conditions	Ambient humidity		Min. 35 to 85% RH (non-condensing)					
oonaniono	Air pressure		860 to 1060 hPa					
	Mass (Weight)		Approx. 130 g 4.59 oz Approx. 120 g 4.23 oz					
Others	Available standards		UL, c-UL, CE					
	Operating display		LED (red), During time delay: blinking, After time delay: OFF					

Notes: 1. Unspecified measuring conditions are rated operating voltage (in case of DC type, ripple rate of 5% or less), ambient temp. 20°C 68°F, and stop time 1 second.

2. Reset start applies to QM4H-G type.

3. Excluding switches

4. Note that if the QM4H-G type is set to zero "0" and a STOP signal is input, output will begin when the power is turned on.

5. The protective structure on the AQM4801 is IP50, and IP64 for the AQM4803.

characteristics, do not remove the

5. When installing the panel, use the

* Set the reset inputs ① to ③ and stop inputs ① to ④ to 20 ms or higher. * When shorting a signal, please set the inter-terminal resistance to 1 k Ω or less, and the inter-terminal residual voltage to 2 V or less.

When releasing, please set the inter-terminal resistance to 100 $k\Omega$ or greater.

Precautions in using the QM4H

1. Avoid locations subject to flammable or corrosive gases, excessive dust, oil, vibrations, or excessive shocks.

2. Since the main-unit is made of polycarbonate resin, avoid contact with or use in environments containing methyl alcohol, benzene, thinners, and other organic solvents; and ammonia, caustic sodas, and other alkaline substances.

3. Power supply superimposed surge protector

Although a surge protector will withstand standard-waveform voltage with the values in the next table, anything above this will destroy the internal circuit. You should therefore use a surge absorber.

12 to 48 V AC/DC	100 to 240 V AC/DC
1,000 V	6,000 V

Surge waveform

Compliance with the CE marking

• When using in applications to which EN61010-1/IEC61010-1 applies, abide by the following conditions.

- 1) Ambient conditions
- Overvoltage category II, pollution level 2
- Indoor use

 Acceptable temperature and humidity range: -10 to +55°C, 30 to 85%RH (with no condensation at 20°C)

Under 2000 m elevation

2) Use the unit in a location that matches the following conditions.

• There is minimal dust and no corrosive gas.

• There is no combustible or explosive gas.

• There is no mechanical vibration or impacts.

• There is no exposure to direct sunlight.

- Located away from large-volume
- electromagnetic switches and power lines with large electrical currents.

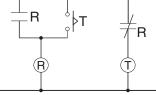

(about 1 month or more) will wear out the electronic components. If you will be keeping it powered continuously, combine with a relay to create the circuit shown below:

continuously for a long period of time

7. Avoid leaving the unit powered

powered up with output set to ON

continuously. Leaving the unit

3) Connect a breaker that conforms to EN60947-1 or EN60947-3 to the voltage input section.

4) Applied voltage should be protected with an overcurrent protection device (example: T 1A, 250 V AC time lag fuse) that conforms to the EN/IEC standards.
