

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Address: A1208, Overseas Decoration Building, #122 Zhenhua RD., Futian, Shenzhen, China

Features

- 3.3V from a single AA battery or from an external source (boost converter)
- Efficiency 93%, >80% at 10% load
- Input voltage range down to 0.65V
- Input and output power measurement capability
- Micro-USB type B or 0.100" (2.54mm) pin output

Evaluation Module

Description

The R-78S3.3-0.1-EVM-1 Evaluation Module generates 3.3V from a single AA battery or from an external source. By using the external input source, any voltage source (other types of batteries, energy harvesters, etc.) in the range from 0.65V to 3.15V can be used. The evaluation module contains a AA battery holder, power switch, R-78S3.3-0.1 boost converter and a micro-USB connector. Jumper headers are provided to allow various test measurements to be made. An enable pin puts the R-78S into sleep mode where it draws only 7uA from the battery.

Selection Guide

Part Number	Input Voltage Range ⁽³⁾ [VDC]	Output Voltage [VDC]	Output Current [mA]	Efficiency ⁽¹⁾		Max. Capacitive Load ⁽²⁾ [μF]
				@ min Vin [%]	@ typ. Vin [%]	
R-78S3.3-0.1	0.65-3.15	3.3	100	92	93	470

Specifications (measured @ ta= 25°C, 1.5Vin, full load after warm up unless otherwise stated)

BASIC CHARACTERISTICS				
Parameter	Condition	Min.	Typ.	Max.
Under Voltage Lockout	DC-DC OFF		0.4VDC	
Overload Capability ⁽³⁾	peak duty cycle 10%		150%, 10s	
Quiescent Current			160μA	
Start-up Time			2ms	
Rise Time			800μs	
Internal Operating Frequency			1200kHz	
Minimum Load		0%		
Dropout Voltage			150mV	
Output Ripple and Noise			100mVp-p	
ON/OFF CTRL	DC-DC ON DC-DC OFF		Open or 0.7V ≤ VCTRL < Vin Short to GND or VCTRL < 0.1V	
Input Current of CTRL Pin			5μA	
Standby Current			7μA	

Notes:

Note1: Efficiency is tested at full load. Typ. Vin = 1.5V

Note2: Max. capacitive load is tested at nominal input and full resistive load

Note3: For more information, please refer to "Overload Capability Graph" on page P-2

Caution:

ESD sensitive. Always follow ESD preventative procedures when handling the product!

Specifications (measured @ $t_a = 25^\circ\text{C}$, 1.5V_{in} , full load after warm up unless otherwise stated)

Overload Capability Graph

Quick Start Guide

- Insert the AA battery into the battery holder (only one way possible).
- If powering USB-powered demonstrators: plug in the micro-USB cable.
- Turn on and off using the slide switch.
 - Note: to reduce the power consumption, no indicator LED is fitted. Remember to switch off to conserve the battery.
- The output voltage is accessed via J7 or the USB port.
- To measure the input and output current of the R-78S, remove the jumpers on J4 and J5. J4 and J5 are standard 0.100" (2.54mm) pin headers to allow current measurement device connections (ampere meter, scope probe).
- When an external voltage source (no on-board battery) is used on J3, change the jumper position on J1 to pin 1 and pin 2 (VEXT).
- When the on-board AA battery is used, change the jumper position on J1 to pin 2 and pin 3 (VBAT).
- To set the R-78S into sleep mode, apply the provided jumper on both pins of J6 (CTRL to GND).

Component Placement

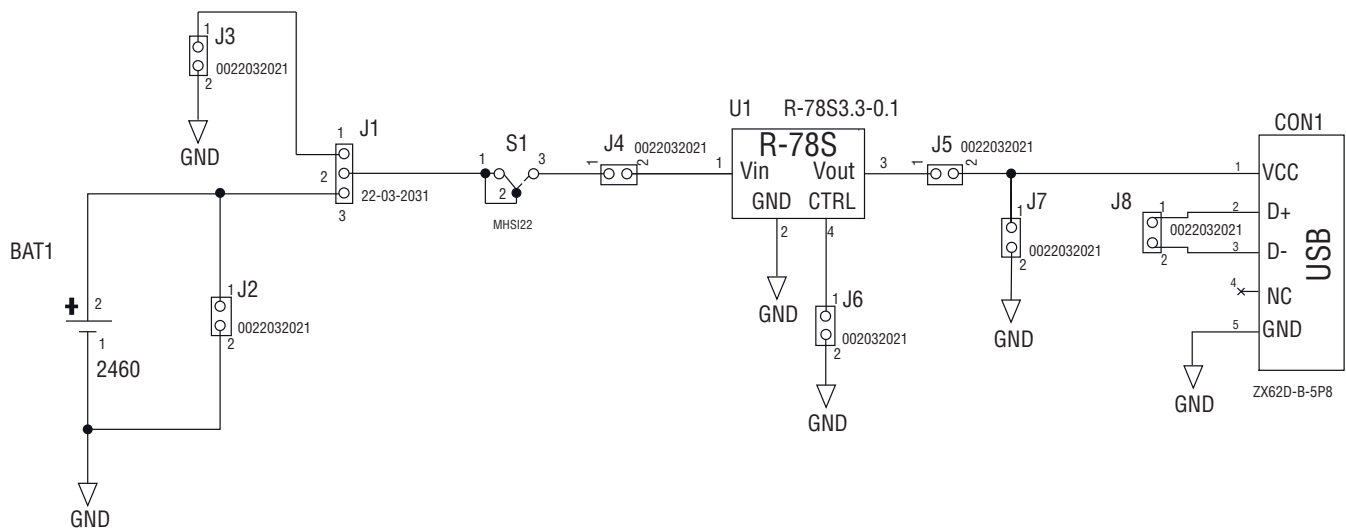

Specifications (measured @ ta= 25°C, 1.5Vin, full load after warm up unless otherwise stated)

Component List		
Part	Description	Setting
BAT1	AA battery holder	
J1	3 pin 0.100" (2.54mm) header for VEXT and VBAT	Factory set to on-board battery
J2*	2 pin 0.100" (2.54mm) header for VBAT and GND	Leave open if not used
J3	2 pin 0.100" (2.54mm) header for VEXT and GND	Leave open if not used
J4	2 pin 0.100" (2.54mm) header for input current	Leave closed if not used
J5	2 pin 0.100" (2.54mm) header for output current	Leave closed if not used
J6	2 pin 0.100" (2.54mm) header for CTRL (enable) and GND	Leave open if not used
J7	2 pin 0.100" (2.54mm) header for VOUT and GND	Leave open if not used
J8	2 pin 0.100" (2.54mm) header for USB D+ and D-	Leave open if not used
S1	Slide switch	Factory set OFF
CON1	USB micro B connector	
U1	R-78S3.3-0.1 boost converter	

***Caution:**

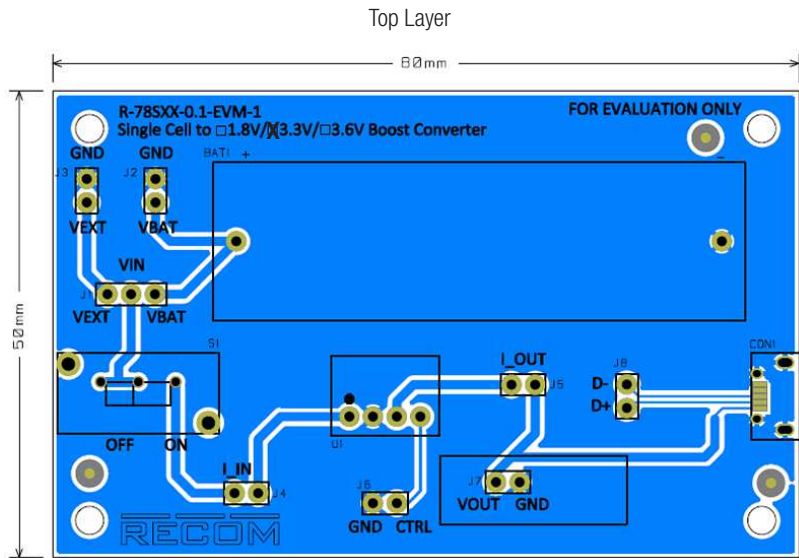

DO NOT PLACE A JUMPER ON J2. DOING SO WILL CAUSE THE BATTERY TO SHORT CIRCUIT AND CREATE THE RISK OF FIRE.
