

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

PROTECTION PRODUCTS

Description

RailClamp® 3324P provides ESD protection for high-speed data interfaces. It features a high maximum ESD withstand voltage of $\pm 17\text{kV}$ contact and $\pm 20\text{kV}$ air discharge per IEC 61000-4-2. RClamp3324P is designed to minimize both the ESD peak clamping and the TLP clamping. Package inductance is reduced at each pin resulting in lower peak ESD clamping voltage. The dynamic resistance is among the industry's lowest at 0.15 Ohms (typical). Maximum capacitance on each line to ground is 0.65pF allowing the RClamp3324P to be used in applications operating in excess of 5GHz without signal attenuation. Each device will protect up to four lines (two high-speed pairs).

RClamp3324P is in a 10-pin SGP2510P8 package measuring 2.5 x 1.0mm with a nominal height of 0.60mm. The leads have a nominal pin-to-pin pitch of 0.50mm. Flow-through package design simplifies PCB layout and maintains signal integrity on high-speed lines.

The combination of low peak ESD clamping, low dynamic resistance, and innovative package design enables this device to provide the highest level of ESD protection for applications such as USB 3.0, eSATA, and DisplayPort.

Features

- Transient Protection to
 - ♦ IEC 61000-4-2 (ESD) 20kV (Air), 17kV (Contact)
 - ♦ IEC 61000-4-4 (EFT) 4kV (5/50ns)
 - ♦ IEC 61000-4-5 (Lightning) 4.5A (8/20 μ s)
- Package design optimized for high speed layout
- Protects four high-speed data lines
- Working Voltage: 3.3V
- Low Capacitance: 0.65 pF maximum (I/O to GND)
- Dynamic Resistance: 0.15 Ohms (Typ)
- Solid-State Silicon-Avalanche Technology

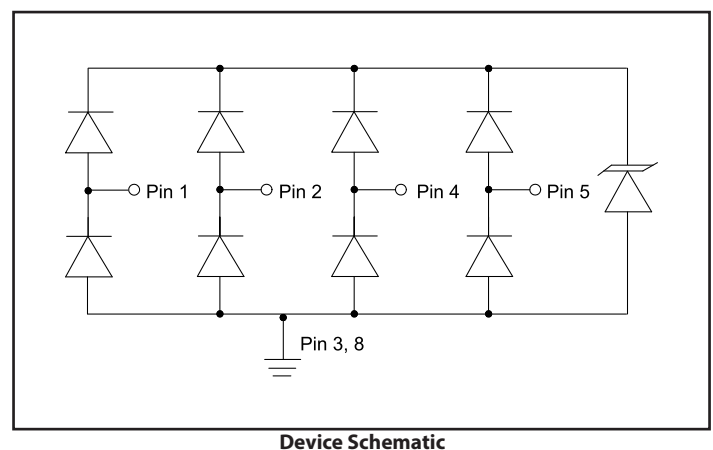

Mechanical Characteristics

- SGP2510P8 Package
- Pb-Free, Halogen Free, RoHS/WEEE Compliant
- Nominal Dimensions: 2.5 x 1.0 x 0.60 mm
- Lead Finish: NiPdAu
- Molding Compound Flammability Rating: UL 94V-0
- Marking : Marking Code + Date Code
- Packaging : Tape and Reel

Applications

- USB 3.0
- Industrial Equipment
- Digital Visual Interface
- LVDS Interfaces
- eSATA

Application Information

USB Interface Protection

For USB 3.0 applications, RClamp3324P is recommended for protecting the 5Gb/s SuperSpeed line pairs. Figure 1 below shows an example of protecting a USB 3.0 Type-A interfaces (host side shown). Lines are routed through each device entering at pins 1, 2, 4, and 5 and exiting at pins 10, 9, 7, and 6 respectively (Figure 2). Each trace should run under the device and connect the pins together. Ground connection is made at the center tabs (pins 3, and 8). Traces should be kept the same length to avoid impedance mismatch. The differential impedance of each pair can be controlled for USB 3.0 (85 Ohms +/-15%) while maintaining a minimum trace-to-trace and trace-to-pad spacing. Individual PCB design constraints may necessitate different spacing or trace width. Both ground pads should be connected for optimal performance. Ground connection is made using filled via-in-pad.

RClamp0512TQ is used to protect D+ and D- lines. These lines are routed through RClamp0512TQ at pin 1 and pin 2. Pin 3 is connected to the ground plane. RClamp0512TQ is qualified to AEC-Q100. Additional information may be found on the device data sheet.

Single line devices such as uClamp0571P are recommended for surge and ESD protection of the VBus line. This device features high surge and ESD capability and may be used on 5V power rails. In power delivery (PD) applications, higher working voltage TVS device may be needed. Options exist for ESD and surge protection up to 24V.

Device Placement

Placement of the protection component is a critical element for effective ESD suppression. TVS diodes should be placed as close to the connector as possible. This helps reduce transient coupling to nearby traces. Ground connections should be made directly to the ground plane using micro-vias. This reduces parasitic inductance in the ground path and minimizes the clamp voltage seen by the protected device.
