

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### 3.0V TO 4.2V, 2.4GHz FRONT END MODULE

RF6525 KL6252 KLWD M

Package Style: QFN, 20-Pin, 3.5 mmx3.5 mmx0.5 mm

### **Features**

■ TX Output Power: 22dBm

RX Gain: 11.5dBRX NF: 2.5dB

 Integrated RF Front End Module with TX/RX balun, PA, Filter, LNA with Bypass Mode and DP2T Switch.

 Dual Differential Transceiver Interface.

# **Applications**

- ZigBee® 802.15.4 Based Systems for Remote Monitoring and Control
- 2.4GHz ISM Band Applications
- Smart Meters for Energy Management

Functional Block Diagram

# **Product Description**

The RF6525 integrates a complete solution in a single Front End Module (FEM) for ZigBee® applications in the 2.4 GHz to 2.5 GHz band. This FEM integrates the PA plus harmonic filter in the transmit path and the LNA with bypass mode in the receive side. It also integrates a diversity switch and provides balanced input and output signals for both the TX and RX paths respectively.

The RF6525 FEM is ideal for ZigBee® systems operating with a minimum output power of 20dBm and high efficiency requirements. On the receive path, the RX Chain provides 11.5dB of typical gain with only 7 mA of current and excellent NF of 2.5dB. This FEM meets or exceeds the system requirements for ZigBee® applications operating in the 2.4GHz to 2.5GHz band. The device is provided in a 3.5mm x 3.5mm x 0.5mm, 20-pin QFN package.

## **Absolute Maximum Ratings**

Parameter	Rating	Unit
DC Supply Voltage	5	V
Operating Case Temperature	-40 to +85	°C
Storage Temperature	-40 to +150	°C
ESD Human Body Model RF Pins	1000	V
ESD Human Body Model All Other Pins	500	V
ESD Charge Device Model All Pins	500	V
Moisture Sensitivity Level	MSL 2	
Maximum Input Power to PA and LNA (No Damage in High Gain Mode)	+5	dBm

#### Caution! ESD sensitive device.

Caution! ESD sensitive device.

Exceeding any neor a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied. The information in this publication is believed to be accurate and reliable. However, no responsibility is assumed by RF Micro Devices, inc. ("RFMD") for its use, nor for any infringement of patients, or other rights of third parties, resulting from its use. No license is granted by implication or otherwise under any patient or patient rights of RFMD. RFMD reserves the right to change component circuitry, recommended application circuitry and specifications at any time without prior notice.

RFMD Green: RoHS compliant per EU Directive 2002/95/EC, halogen free per IEC 61249-2-21, < 1000 ppm each of antimory trioxide in polymeric materials and red phosphorus as a flame retardant, and <2% antimony in solder.

Parameter	Specification			Unit	Condition	
Parameter	Min.	Тур.	Max.	Ullit	Condition	
Overall					Specifications must be met across supply voltage, control voltage, and temperature ranges unless otherwise noted. Typical conditions: T=25 $^{\circ}$ C, $V_{CC}$ =3.6 V, TX_EN=High	
Operating Frequency Range	2400		2483	MHz		
Operating Voltage (V <sub>CC</sub> )	3.0	3.6	4.2	V		
Leakage Current		0.5		uA	V <sub>CC</sub> =3.6V, RF=0FF, TX_EN=Low, RX_EN=Low. LNA_EN, ANT_SEL, and LNA Mode=Low.	
Transmit Parameters						
Frequency	2400		2483	MHz		
Input Return Loss		-13	-9.6	dB	Over all conditions for both Antenna 1 and Antenna 2

Pin	Function	Description
1	LNA_MODE	Bypass enable pin. See logic table for operation.
2	VCC	Voltage Supply. An external 1uF capacitor might be needed for low frequency decoupling.
3	ANT_SEL	Control pin for Antenna select. See logic table for operation.
4	TX_EN	Enable voltage pin for the PA and Transmit switch. See logic table for operation.
5	RX_EN	Enable voltage pin for the LNA and Receive switch. See logic table for operation
6	ANT2	This is the common port (antenna). It is matched to $50\Omega$ and DC-block is provided internally.
7	GND	Ground.
8	ANT1	This is the common port (antenna). It is matched to $50\Omega$ and DC-block is provided internally
9	GND	Ground.
10	VCC	Voltage Supply. An external 1uF capacitor might be needed for low frequency decoupling
11	NC	No connect pin. Must be left floating.
12	VCC	Voltage Supply. An external 1uF capacitor might be needed for low frequency decoupling
13	VCC_BIAS	Voltage Supply. An external 1 uF capacitor might be needed for low frequency decoupling
14	GND	Ground.
15	TXCT	Center tap for passing thru DC voltage to TXN and TXP pins that connect to the TXVR SoIC.
16	TXN	$100\Omega$ single-ended, $200\Omega$ differential.
17	TXP	$100\Omega$ single-ended, $200\Omega$ differential.
18	RXCT	Center tap for passing thru DC voltage to RXBN and RXBP pins that connect to the TXVR SolC.
19	RXBN	$100\Omega$ single-ended, $200\Omega$ differential.
20	RXBP	$100\Omega$ single-ended, $200\Omega$ differential.

# **Package Drawing**

# **RF6525 Biasing Instructions**

#### TX Mode

- With the RF source disabled, apply 3.3V to V<sub>CC</sub> with other control set to 0V
- Set VTX=High, keeping VRX and LNA\_MODE at OV
- Apply OV to ANT\_SEL to select the ANT1 port, or 2.8V to select the ANT2 port
- V<sub>CC</sub> current should rise to 70mA to 80mA quiescent current
- Enable the RF source; V<sub>CC</sub> current should rise to a maximum of 200 mA depending on output power

#### **RX LNA Mode**

- $\bullet$  With the RF source disables, apply 3.3 V to  $V_{CC}$  with other controls set to 0 V
- Set VRX=High to RX Enable and LNA\_MODE, keeping TX at OV
- Apply OV to ANT\_SEL to select the ANT1 port, or 2.8V to select the ANT2 port
- V<sub>CC</sub> current should rise to 7 mA to 8 mA
- Enable the RF source; V<sub>CC</sub> current may increase a few mA depending on output power

#### **RX Bypass Mode**

- $\bullet$  With the RF source disabled, apply 3.3V to  $V_{CC}$  with other controls set to 0V
- Set VRX=High, keeping TX and LNA\_MODE at OV
- · Apply OV to ANT\_SEL to select the ANT1 port, or 2.8V to select the ANT2 port
- V<sub>CC</sub> current should be in the uA range
- Enable the RF source; V<sub>CC</sub> current should remain in the uA range

	Logic Table				
Mode	TX_EN	RX_EN	LNA_MODE	ANT_SEL	
TX-ANT1	HIGH	LOW	LOW	LOW	
TX_ANT2	HIGH	LOW	LOW	HIGH	
RX-ANT1 LNA	LOW	HIGH	HIGH	LOW

RX-ANT2 BYP	LOW	HIGH	LOW	HIGH	
All OFF	LOW	LOW	LOW	LOW	

Operating currents at nominal conditions

# **Evaluation Board Schematic**

# **PCB Design Requirements**

#### **PCB Surface Finish**

The PCB surface finish used for RFMD's qualification process is electroless nickel, immersion gold. Typical thickness is  $3\mu$ inch to  $8\mu$ inch gold over  $180\mu$ inch nickel.

#### **PCB Land Pattern Recommendation**

PCB land patterns for RFMD components are based on IPC-7351 standards and RFMD empirical data. The pad pattern shown has been developed and tested for optimized assembly at RFMD. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.

#### PCB Metal Land and Solder Mask Pattern

A = 0.250 x 0.290 (mm) Typ Rounded Rectangle 50% B = 0.290 x 0.250 (mm) Typ Rounded Rectangle 50% C = 0.000 (mm) Sp. Rounded Rectangle 50%

A = 0.390 x 0.430 (mm) Typ Rounded Rectangle 50% B = 0.430 x 0.390 (mm) Typ Rounded Rectangle 50% C = 2.340 (mm) Sp Rounded Rectangle 5%

A = 0.225  $\times$  0.281 (mm) Typ Rounded Rectangle 10% B = 0.281  $\times$  0.225 (mm) Typ Rounded Rectangle 10%

Thermal vias for center slug "C" should be incorporated into the PCB design. The number and size of thermal vias will depend on the application, the power dissipation, and this electrical requirements. Example of the number and size of vias can be found on the RFMD evaluation board layout.
