![Chipsmall logo]

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Contact us

FEATURE HIGHLIGHTS

- Maximum 128Gbps switching capacity, 95.24Mpps throughput
- Rugged industrial design for -40~75°C harsh environment operation
- Flexible modular configuration, 3 Module-dedicated slots
- Up to 24 PoE ports, with maximum 720W of PoE power budget
- 4 x 1 Gigabit or 4 x 10 Gigabit SFP Uplink slots
- Up to 54 possible configurations in 4 power input versions
- ITU-T G.8032 ERPS Ring, RSTP, or MRP (client) redundancy
- RIP, OSPF, Static Routing, PIM supported Layer-3 switching
- EN50155 / EN50121-4 Certified for Railway applications
- PROFINET CC-B v2.33 Conformance, Provides GSD Description file

PRODUCT DESCRIPTION

Flexible: Atop's high-density RHG7628 Managed Rack-mount switch will provide you the flexibility your application needs. You will be able to choose among 8 different Layer-3 Routing Core versions (based on power supply and uplink port configurations) and five different 4/8-Port modules and customize your device in a very simple way.

Designed for PoE, in wide temperature: RHG7628 supports *up to 24 Gigabit ports in any 8 or 4-port multiple configuration*. Specifically designed for bringing power through Ethernet cable virtually anywhere, a *maximum output Power over Ethernet of 720W over the 24 ports is allowed* (PoE/PoE+ configuration - 802.3af/at). Available in *4 power input variants*, it is EN 60950-1:2006 certified and designed to handle the harshest environments. Its fanless design and EMC Level 3 protection guarantee *operations within -40 and +75°C.*

Powerul and versatile: RHG7628 supports *IPv4 Static Routing, RIPv1/v2, OSPFv2, IGMP, IGMP Snooping, PIM Dense Mode and Sparse Mode, DVMRP and VRRP for Routing Redundancy*. Then, it embeds all features of RHG7528 (layer-2 version), allowing (through ERPS) network self-recovery down to 20ms on full load. Almost any redundant ring topology is supported, such as ITU-T G.8032 ERPS Ring, IEEE802.1D-2004 RSTP, STP, MSTP, MRP (Client), iA-Ring, iA-Chain and many compatible rings.

Automation and IoT ready: Conforming with Profinet CC-B v2.33 and being EtherNet/IP ready make RHG7628 the perfect candidate for being the backbone of your Industrial automation network.

The RHG7628 Series is fully **EN50155-certified** to ensure reliable performance under a wide range of power supply conditions, and it complies with essential sections of **EN50121-4** for ground equipment.

Secure: The first Industrial Managed Secure Switch! Protect your LAN from Eavesdropping and impesronation through 802.1AE MACsec. With no additional latency and 100% Gigabit Throughput guarantee, dedicated modules can provide you the internal ultimate security solution.
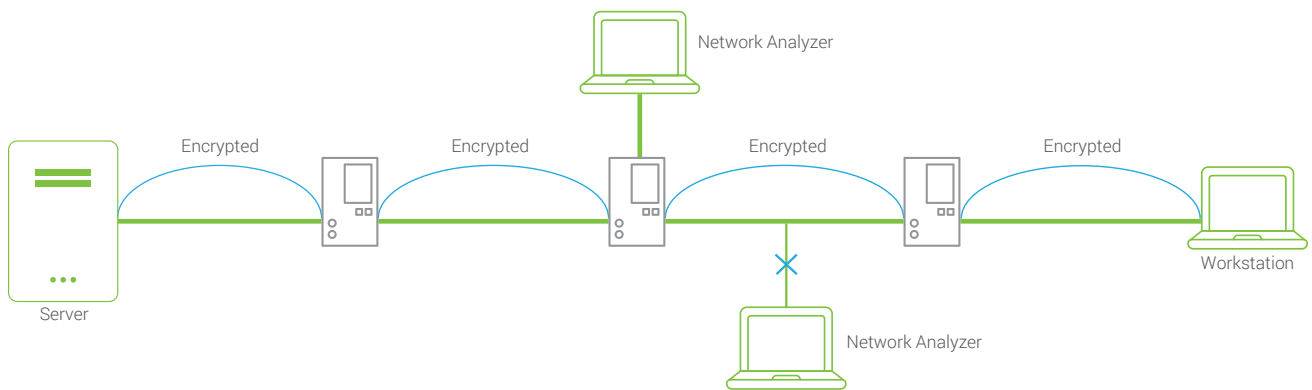

APPLICATION CASE

What is MACsec?

IEEE 802.1AE protocol (MACsec) provides —to the components that support it- authentication, integrity and confidentiality using strong crypto (AES-128 bit). Being the communication encrypted from hop-to-hop (so, decrypted upon receipt and encrypted again —with a different key- before forwarding), it can protect your network not only for wiretapping, masquerading, man-in-the-middle attacks and denial-of-service, but also from impersonation and replay attacks.
And that's not all. ***Being the encryption carried out by hardware, the full Gigabit Bandwidth is preserved and no additional latency is added to the network!***

Application example

In the below network diagram you can see how easy it is to exploit all features of RHG7628. Different Switches are interconnected through a 10 Gigabit Ethernet Fiber backbone in an OSPFv2 Mesh. The device on the left for example powers through PoE/PoE+ IP-cam surveillance System, provides Industrial-Grade connectivity to the Factory and -through a secured, encrypted, connection- guarantees confidentiality to the information. The device on the right bridges the secure connection to the office, ensuring Gigabit-speed, no latency data security.
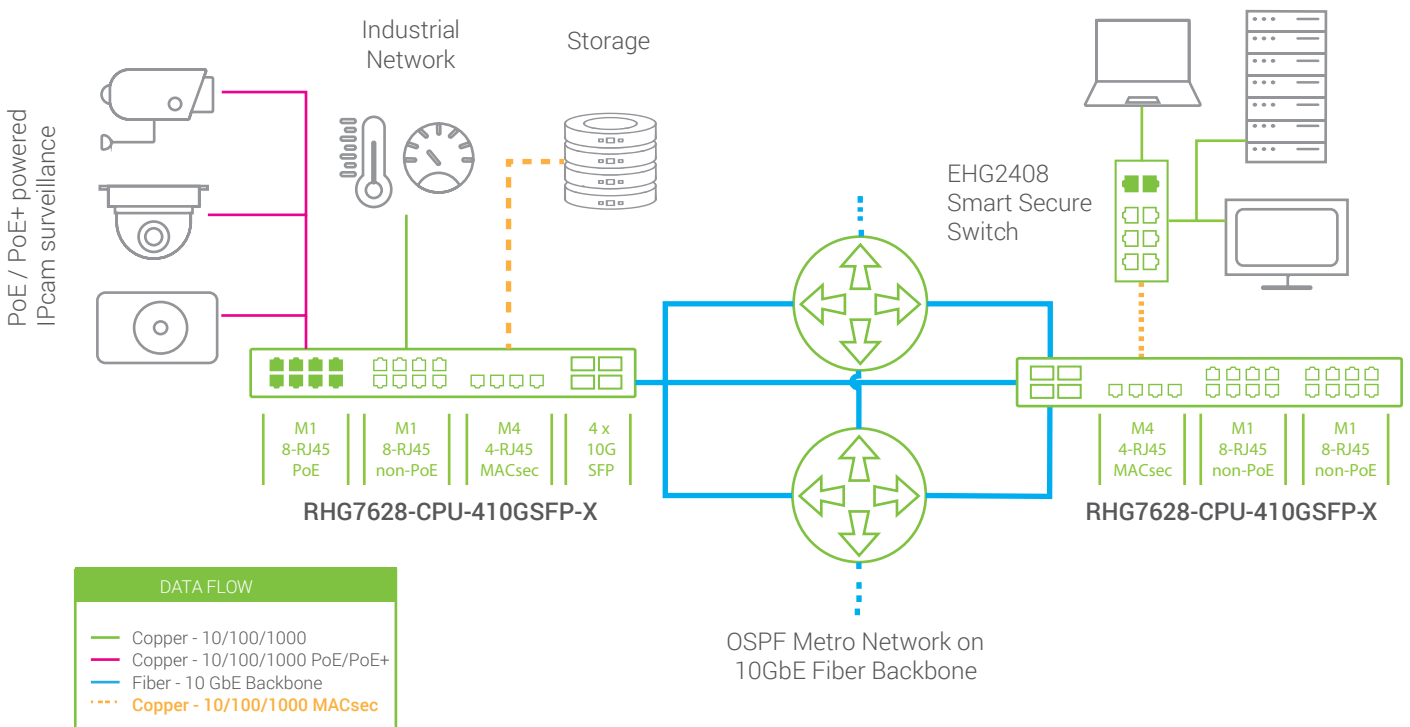

CONFIGURATION EXAMPLE

How does it work?

RHG7628 configuration is as easy and immediate as you can imagine: pick any Core CPU unit from the catalogue, choosing among different power supply configurations and uplink speeds (RHG7628 provides 3 module-slots and 4 SFP uplinks, in either 1GbE or 10GbE speed). Then, choose the modules you want based on your needs. Install the modules and Power on!
It's all done. Just jump to Web, Console or Telnet configuration!

RHG7628-CPU-410GSFP-R Layer-3 Core unit, with 4 x 10 Gigabit SFP uplink slots and redundant AC power input

RHG7X28-M1
8-port Gigabit RJ45 PoE module
