Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Motor Controllers
3-Phase Analog Power Controller
Types RSC-AAM60/RSO .....

- **Control and output modules for analogue control of 3-phase induction motors or heaters**
- **Rated operational current: 3 x 10, 25, 50, 90, 110 AACrms**
- **Rated operational voltage: Up to 600 VACrms**
- **Supply voltage range: 10 to 32 VDC**
- **Control current range: 0 to 20 mA/4 to 20 mA**
- **LED-indication for line ON and load ON**
- **Varistor protection**
- **Approvals: CE, CCC, UL, CSA**

Product Description

The micro processor based control module RSC-AAM60 is used with output modules RSO... to achieve a voltage controlled soft start/soft stop of 3-phase motors and a possibility for energy reduction when e.g. a fan is running with a variable capacity. This function is achieved by controlling the control module with a current between 4 and 20 mA (0 and 20 mA). The output module can be selected according to the rated operational voltage and the size of the load.

This phase angle controlled soft-start unit can be used for pumps, fans, heaters, lights and many other applications.

LED indications for line ON and load ON gives a clear status indication.

General Spec., Control Module

Operational voltage range Line to line	 150 to 660 VACrms
Operational frequency range	45 to 65 Hz
Supply current @ no output current @ max. output current	 < 30 mA < 180 mA
Supply voltage range	10 to 32 VDC
CE-marking	Yes
Approvals	UL, CSA, CCC

Control Specifications

Minimum output voltage	Power supply minus 8 VDC
Output current short-circuit protected	 ≤ 150 mA DC

Thermal Specifications

Operating temperature	-20° to +70°C (-4° to +158°F)
Storage temperature	-40° to +100°C (-40° to +212°F)

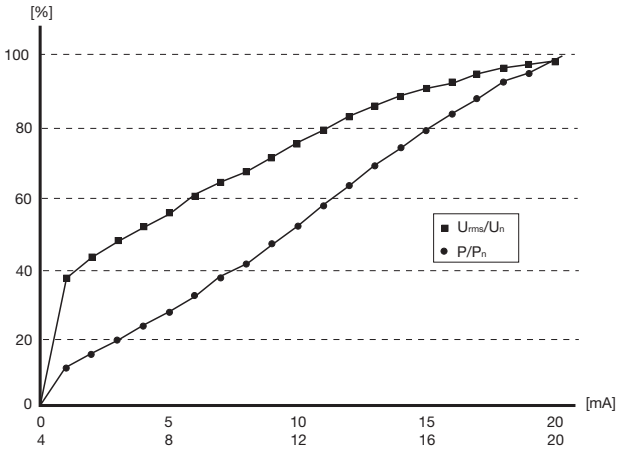
Control Input Specifications

Control current A-input B-input	 0 to 20 mA 4 to 20 mA
Input impedance	250 Ω
Power supply reset time	≤ 300 ms
Response time (input to trigger outputs)	≤ 1 cycle

Isolation Control Module

Rated isolation voltage Input to trigger outputs	≥ 4000 VACrms

Operation Diagram



Output as a function of control current @cos(ø) = 0.9

Mode of Operation

The control module RSC-AAM60 is used with the output module RSO..... to achieve analog control of 3-phase induction motors.

Soft starting is achieved by increasing the motor voltage in accordance with the input current. Soft stopping is achieved by decreasing the motor voltage in accordance with the input current.
When the motor is running idle, the motor voltage can be reduced by lowering the input current, whereby energy is saved.

Heating elements can also be controlled with the RSC/RSO with the use of appropriate filters.

Heatsink Selection

Carlo Gavazzi Heatsink (see Accessories)	**Thermal resistance**
No heatsink required	$R_{th\ s\text{-}a}$ > 8.0 K/W
RHS 300 Assy or backplate	5.0 K/W
RHS 301 Assy	0.8 K/W
RHS 301 F Assy	0.25 K/W
Consult your distributor	< 0.25 K/W

Compare the value found in the load current versus temperature chart with the standard heatsink values and select the heatsink with the next lower value.

It is recommended to protect the solid state relay against overheating. Therefore the chart also states the maximum switching temperature (70, 80 or 90 °C) for the optional temperature limit switch.

CARLO GAVAZZI

Housing Specifications

Weight	
RSO ..10, ..25, ..50	Approx. 275 g
RSO ..90, ..110	Approx. 385 g
Housing material	Noryl, glass-reinforced
Colour	Black
Base plate	
@ ≤ 50 A	Aluminium, nickel-plated
@ ≥ 90 A	Copper, nickel-plated
Potting compound	Polyurethane, black

Relay	
Mounting screws	M5
Mounting torque	≤ 1.5 Nm
Control terminal	
Mounting screws	M3
Mounting torque	≤ 0.5 Nm
Power terminal	
Mounting screws	M5 x 6
Mounting torque	≤ 1.5 Nm

Applications

The output module RSO ..110 is recommended for motors up to 22 kW @ 400 V. The RSO ..110 is designed for use in applications with high surge current conditions. Care must be taken to ensure proper heat-sinking when the relays are to be used at high nominal currents. Adequate electrical connection between relay terminals and cable must be ensured.

Example 1:
Power dissipation - RSO 40110:
I_{load} = 40 Arms = 111 W
See previous page.

Example 2:
Motor: 3 kW, 4 HP
3 x 400 VAC, 4-pole
T_A: 50°C
Starting time: ≤ 5 s

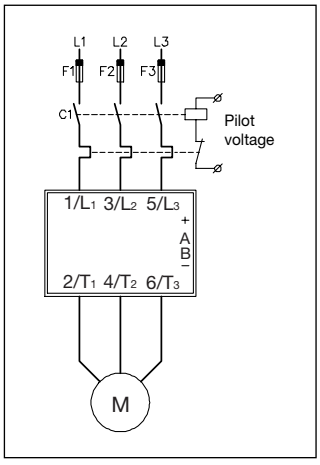
For this application RSC-AAM60 must be used. The output module RSO4025 is selected according to the Selection Guide.

The smallest heatsink required is 1 K/W, and the power dissipation is 25 W.

This gives:
Control module:
RSC-AAM60
Output module: RSO 4025
Heatsink:1K/W

Connection to the mains
Since no motor protective circuitry is included in the RSC/RSO, the motor must be protected in the usual way, i.e. either by a thermal relay, a PTC-resistor or a Klixon bimetal temperature switch near the motor windings.

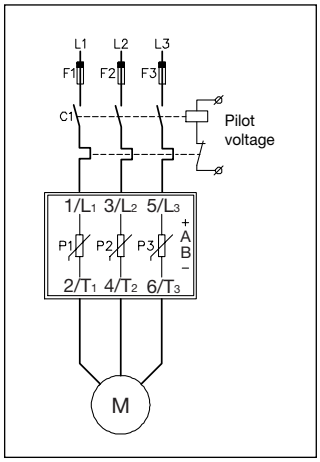
If short circuit protection is required, fuses F1 to F3 should be ultrafast and selected according to the load integral (I^2t) of the RSO output module and the motor load.



Overload protection by thermal relay

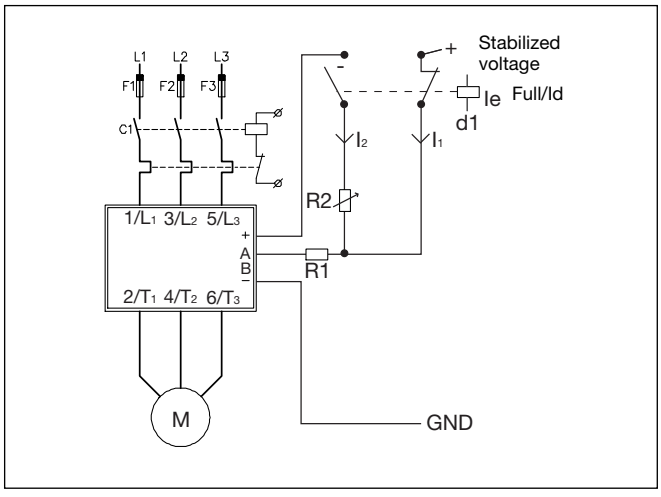
Transient voltage protection
With an unfiltered main supply, voltage transient may occur. Since these transients could have a high energy content, it is advisable to use varistors to protect the output module.

The varistors are already mounted in the RSO output module and they are selected according to the rated operational voltage.



Energy saving for motors in idle mode
When motors are running idle, it not necessary to maintain a full magnetic field, as is the case when the motor has to produce full torque. By lowering the motor voltage, power losses inside the motor are also reduced.

When the motor is idle, d1 will switch the control current from I_1 > 20 mA to I_2, which is adjusted to a value at which the motor is still running at full speed, but at a lower voltage. Please remark that this type of phase-angle controlled voltage reduction, demands additional filtering to fulfill EMC regulations.



Applications (cont.)

In order to achieve a 4 to 20 mA signal from a 12 or 24 VDC source, a resistor and a potentiometer should be connected in series with the voltage source and the RSC controller.

We define the $I_{max.}$ to be e.g. 24 mA, which means that the series resistors must be:

R_1 (12 V) = U/I - Rint =
12 V/24 mA - 250 Ω = 250 Ω

R_1 (24 V) = U/I - Rint =
24 V/24 mA - 250 Ω = 750 Ω

If the minimum current is defined to be e.g. 2.4 mA and the 250 Ω Rint input resistance of the RSC is also calculated in:

R_2 (12 V) = U/I - R_1 - Rint =
12/2.4 - 250 - 250 = 4500 Ω

R_2 (24 V) = U/I - R_1 - Rint =
24/2.4 - 750 - 250 = 9000 Ω
