

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

SUMICON CONNECT

General

The SUMICON 1600 series are high-performance compact crimp type connectors developed for labor saving in connection work. 8, 12, 16, 20, 24, 34, 45 and 60-contact models are available. All models are compatible with our previous top-lock type plig cases. For using the connectors separately, easy-to-mount plastic locks are available to expand their functions.

Features

- Since this is a press-fit type connector, anyone can performe wiring securely with high reliability.
- For contact, a two-point contact system is employed for outstanding reliability, it asiso offers superior mechanical strength.
- The Sumicon 1600 Series Press-Fit Type Connectors are interchangeable with the conventional solder, DIP and lapping type connectors. They are applicable, therfore, to a wider range of applications.
 - 4 To use connector unit separately, jointly employing an easily installable plastic lock will prevent vibrations and/or cable dead weight from unplugging the connector. The plastic lock, moreover, can be used with either center-suspension or panel-mount system.
 - All wiring spliced with the connector is hidden completely inside the housing, allowing for perfect insulation.

Ordering Informations

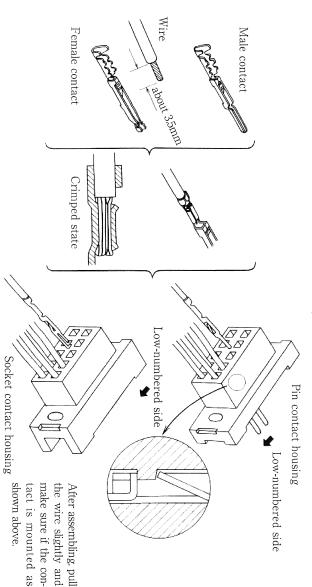

Using the Connectors

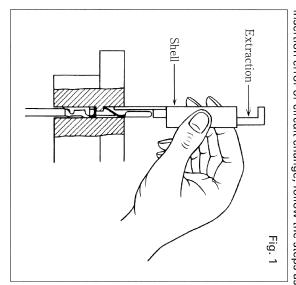

- (1) Take care when removing the connectors to pull out by the housing and not tug on the wires.
- (2) The male terminals of the connectors will be bent if the connectors are twisted when being removed. Take care to pull the characters out straight.
- (3) The plastic locks are sufficiently strong to ensure that the connector engagement will not be loosened by vibration or the weight of the wires. Their strength is not sufficient for other loads. When strngth for some other load is required, use the top-touch lock type plug case (common for both solder and wrapping types).
- (4) Both gold-plated and silver-plated terminals are available. Use the gold-plated type in adverse environments. In other environments, we recommend the economical silver-plated type.
- (5) For crimping, use a manual crimping device for low-volume crimping and maintenance. For highvolume crimping, we recommend the automatic crimping machine shown on page 124.
- (6) For plug-in uses, we recommend Sumicon 1600 series solder or wrapping types for improved functionality.

Assemblina Procedure

Procedure for Contact Extraction

In case of extracting a contact from the housing due to insertion error or circuit change, follow the steps as shown below

- Fig. 2
- 1 Hold the Contact Extractor as shown in Fig. 1, placing the tip of the Extractor on the tip of a contact, then insert it between the contact and the housing.
- When the tip of the Extractor comes into contact with a stepped part in the housing, the spring will come off from the stepped part with a snap which can be felt. Then, extract the contact by pulling the wire.
 - (Caution: Pushing the tip of the extractor forcibly before the spring has come off from the stepped part may damage the contact).
 - Above Fig. 1 and Fig. 2 show how to extract a contact from socket housing. The same procedure can be employed to extract a contact from pin housing.

Use of Connectors with Respect to Polarity (to prevent mis-insertion of connectors)

Polarization of SUMICON 1600 series can be achieved by contact arrangement. The crimp type contacts are designed to float a little, so that the use of a Polarizing

Key is recommended in order to ensure positive polarizatiom.

In Case of 8, 12 and 16 contact

- 1. When crimp types are used in both the male and female, do not fill all cavities with contacts. Use Polarizing Key at minimum 2 cavities of Socket housing as shown below and do not fill pin contacts at the corresponding cavities of male housing.
 - When male crimp type is used in combination with solder or wire wrap female type, the connector coupling shall be done corefully not to couple in reverse position. Couplimg shall be made by matching of traiangle marks on connector inserts.

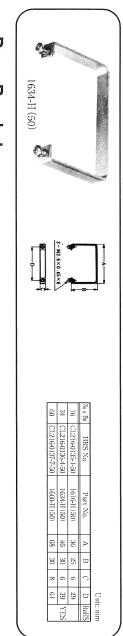

In case of Multi Pin Type more than 20 contact

- 1. SUMICON 1600 series are naturally polarized in all cavities filled with contacts. When all cavities are not filled, Polarizing Keys shall be inserted in vacant cavities to the minimum for preventing reverse coupling. But when Top Touch Lock Plug Shell is used, Polarizing Keys are not necessary
 - because Plug Shell has polarized mechanism.

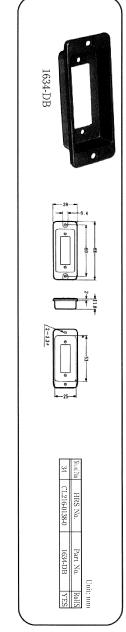

Ņ

When male crimp type is used with some vacant cavities in combination with solder or wire wrap female type, Top Touch Lock Plug Shell is recommended.

SUMICON 1600 SERIES SOLDERING **CONNECTORS**

General

The SUMICON 1600 series are original Hirose rectangular dip soldering connectors 8, 12, 16, 20, 24, 34, 45 and 60-contact models are available. All models are compatible with the previous 1600 series in mounting and accessories.

Features

- Allows straight dip soldering onto a PCB, and is effective in PCB-to-PCB and PCB-to-cable connection.
- Suitable for use in interface, being compact and lightweight and meeting high-density packaging requirements.
- Further cuts interconnection costs when simple locks are used.
- A wide variety of combinations of connection methods available, e.g., dip soldering, wrapping, and crimping, to meet your requirements.

Main Applications

Computers, peripherals and terminals, data communications equipment, measuring instruments,

signal equipment, mobile radio equipment, copier, and FAX machine.

SUMICON 1600 SERIES RIGHT-ANGLE DIP SOLDERING **CONNECTORS (MALE)**

General

The SUMICON 1600 series are Hirose right-angle dip soldering connectors (male).

All models are compatible with the existing soldering

type, wrapping type, crimping tpe, and straight dip soldering type connectors including their accessories. 20, 28, 34 and 60-contact models are available.

Features

- Direct dip soldering on a PCB enables convenient parallel connection with cable plugs.
- Suitable as an interface, being lightweight and capable of high-density packaging.
- Further cuts interconnection costs by using crimping type plugs with plastic locks for simple cable connection, so no cases are needed.
- 4. A wide variety of connection methods available,

- e.g., dip soldering, wrapping, and crimping, to meet your requirements.
- Available with or without a top-touch lock type bracket and side-lock type bracket, offering you many choices for your applications.
- 6. Highly solvent-resistant, using insulating materials with high heat resistance and chemical-resistance.

Main Applications

Electronic equipment such as computers, peripherals and terminals, control equipment, and measuring instru-
