**S1D13714 Mobile Graphics Engine**

**August 2007**

The S1D13714 is an LCD solution designed with support for the digital video revolution in mobile products. The S1D13714 contains an integrated dual port camera interface, hardware JPEG encoder/decoder and can be interfaced to an external MPEG codec. Seamlessly connecting to both direct and indirect CPU interfaces, it provides support for up to two LCD panels. The LCD controller supports all standard TFT panel types and many extended TFT types, eliminating the need for an external timing control IC. The S1D13714 with it's 320K bytes of embedded SRAM and rich feature set provides a low cost, low power, single chip solution to meet the demands of embedded markets requiring Digital Video, such as Mobile Communications devices and Palm-size PCs.

Additionally, products requiring a rotated display can take advantage of the SwivelView™ feature which provides hardware rotation of the display memory transparent to the software application. The S1D13714 also provides support for "Picture-in-Picture Plus" (a variable size window with overlay functions). Higher performance is provided by the Hardware Acceleration Engine which provides 2D BitBLT functions.

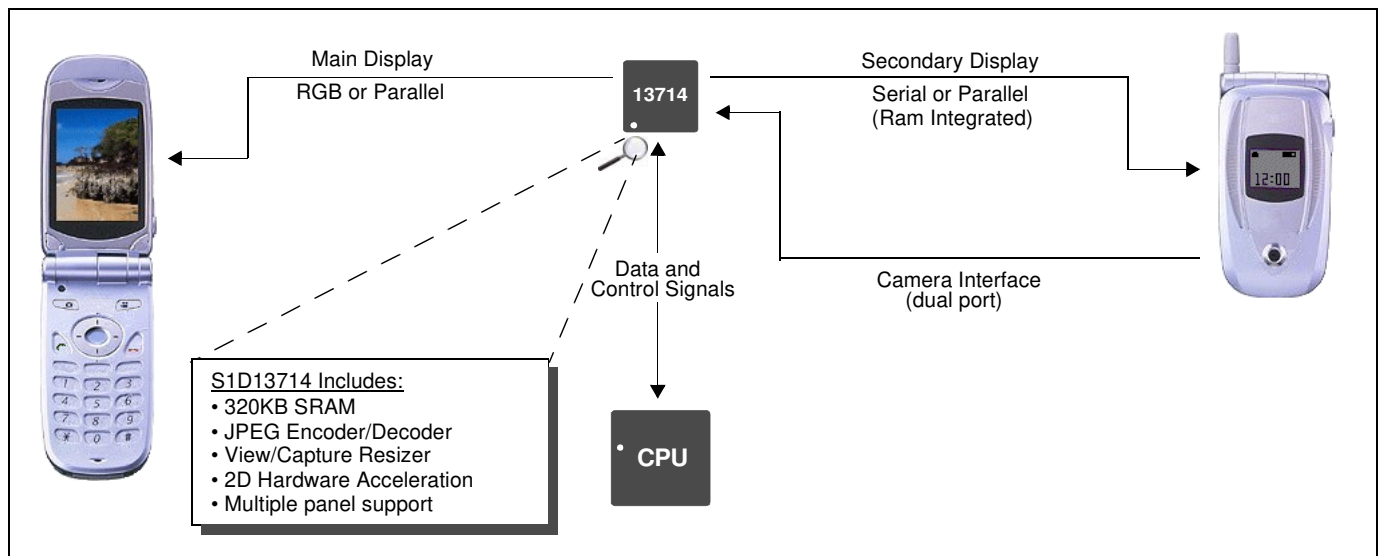

The S1D13714 provides impressive support for cellular and other mobile solutions requiring Digital Video support. However, its impartiality to CPU type or operating system makes it an ideal display solution for a wide variety of applications.
