## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Switching Power Supply S82K

## DIN-Rail Mount Power Supply with a Wide Power Range of $\mathbf{3}$ to $\mathbf{2 4 0}$ W

- Universal input voltage range.
- All models are UL 508 listed.
- Class 2 approved on all models below 240 W, except dual-output types.
- Undervoltage indicators on all 90-W, 100-W and the 240-W "T" models have alarm and output indicators.
- PFC models meet EN61000-3-2 (limits for harmonic current emissions).
- Parallel operation capability ( 100 W and 240 W ).
- Finger-safe terminal block with cover according to VDE0106/P100.
- Approvals: UL, CSA, VDE, and CE.
- 3-year warranty.

## MODEL NUMBER LEGEND

1. Power Factor Correction

None: No
P: Yes
2. Power Ratings

003: 3 W
007: 7.5 W
015: 15 W
030: 30 W
050: 50 W
090: 90 W
100: 100 W
240: 240 W

## 3. Output Voltage

05: +5 VDC
12: +12 VDC
15: +15 VDC
24: +24 VDC
27: Dual output $+12 /-12$ VDC
28: Dual output $+15 /-15$ VDC

## 4. Undervoltage alarm indicator/output

<For 3- to 100-W models>
None: Yes
<For 240-W models>
None:No
T : Yes

## ACCESSORIES (SOLD SEPARATELY)

Stock Note: Shaded models are normally stocked.

## Noise Filter

| Item | Applicable power supply | Part number |
| :--- | :--- | :--- |
| Noise filter | $3-$ to $50-\mathrm{W}$ models | S82Y-JF3-N |
|  | $90-\mathrm{W}$ and 100-W models | S82Y-JF6-N |

DIN Rail

| Item | Length | Width | Part number |
| :--- | :--- | :--- | :--- |
| DIN-rail (See Dimensions section for details.) | $0.5 \mathrm{~m} \mathrm{(1.64} \mathrm{ft)}$ | $7.3 \mathrm{~mm}(0.29 \mathrm{in})$ | PFP-50N |
|  | $1 \mathrm{~m} \mathrm{(3.28} \mathrm{ft)}$ | $7.3 \mathrm{~mm}(0.29 \mathrm{in})$ | PFP-100N |
|  | $1 \mathrm{~m} \mathrm{(3.28} \mathrm{ft)}$ | $16 \mathrm{~mm}(0.63 \mathrm{in})$ | PFP-100N2 |

## Specifications

| Temperature variation influence (See Note 3.) |  | 0.05\%/ ${ }^{\circ} \mathrm{C}$ max. |  |  |  |  |  |  |  |  |
| Startup time |  | 100 ms max. (up to $90 \%$ of output voltage at rated input and output) |  |  |  |  |  | 200 ms max. |  | 300 ms max . |
| Hold time (See Note 3.) |  | 20 ms min . |  |  |  |  |  |  |  |  |

(This table continues on the next page.)
Note: 1. Use with DC voltage input is beyond the conditions of approval or conformance to applicable safety standards.
2. Use the $7.5-\mathrm{W}$ single-output models under the load of $90 \%$ max. if the voltage range is between 90 and 110 VDC.
3. Defined with a $100 \%$ load and the rated input voltage ( 100 or 200 VAC).
4. The output specification is defined at the power supply output terminals.
5. The settings for the output voltage must be within the following range:
$+\mathrm{V}: \pm 1 \%$ of the rated value
$-\mathrm{V}: \pm 5 \%$ of the rated value

Specifications Table - continued from previous page

| Parallel operation |  | Not possible |  |  |  |  |  |  | Possible (2 units max.) |  |
| Characteristics |  |  |  |  |  |  |  |  |  |  |
| Ambient temperature | Operating | See the derating curve in the Engineering Data section (no condensation or icing) |  |  |  |  |  |  |  |  |
|  | Storage | $-25^{\circ} \mathrm{C}$ to $65^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.149^{\circ} \mathrm{F}\right)$ with no condensation or icing |  |  |  |  |  |  |  |  |
| Ambient humidity | Operating | 25\% to 85\% |  |  |  |  |  |  |  |  |
|  | Storage | 25\% to 90\% |  |  |  |  |  |  |  |  |
| Dielectric strength |  | 3,000 VAC at $50 / 60 \mathrm{~Hz}$ for 1 min (between all inputs and outputs) <br> 2,000 VAC at $50 / 60 \mathrm{~Hz}$ for 1 min (between all inputs and GR terminal) <br> 1,000 VAC at $50 / 60 \mathrm{~Hz}$ for 1 min (between all outputs and GR terminal) <br> Alarm current: 10 mA (3- to $7.5-\mathrm{W}$ models) 20 mA (15- to $100-\mathrm{W}$ models) 25 mA ( $240-\mathrm{W}$ models) |  |  |  |  |  |  |  |  |
| Insulation resistance |  | $100 \mathrm{M} \Omega$ min. at 500 VDC (between all outputs and all inputs/GR terminal) |  |  |  |  |  |  |  |  |
| Vibration resistance |  | Malfunction: 10 to $55 \mathrm{~Hz}, 0.375-\mathrm{mm}$ ( $0.15-\mathrm{mm}$ for 240-W model) single amplitude for 2 hrs each in $\mathrm{X}, \mathrm{Y}$, and $Z$ directions |  |  |  |  |  |  |  |  |
| Shock resistance |  | Malfunction: $300 \mathrm{~m} / \mathrm{s}^{2}, 3$ times each in $\pm \mathrm{X}, \pm \mathrm{Y}$, and $\pm \mathrm{Z}$ directions |  |  |  |  |  |  |  |  |
| Screw tightening torque |  | 0.74 N • m max. (See Note 8.) |  |  |  |  |  |  |  |  |
| Output indicator |  | Yes (green) |  |  |  |  |  |  |  |  |
| Electromagnetic interference (See Note 3.) |  | Conforms to FCC class B |  |  |  |  |  | Conforms to FCC class A |  |  |

(This table continues on the next page.)
Note: 1. Use with DC voltage input is beyond the conditions of approval or conformance to applicable safety standards.
2. Use the $7.5-\mathrm{W}$ single-output models under the load of $90 \%$ max. if the voltage range is between 90 and 110 VDC.
3. Defined with a $100 \%$ load and the rated input voltage ( 100 or 200 VAC).
4. The output specification is defined at the power supply output terminals.
5. The settings for the output voltage must be within the following range:
$+\mathrm{V}: \pm 1 \%$ of the rated value
-V : $\pm 5 \%$ of the rated value
6. When using the $7.5-\mathrm{W}$ single-output models within the input voltage range between 90 and 110 VDC , the protection function will operate at a current of $95 \%$ to $160 \%$ of the rated load current. When using the $90-\mathrm{W}$ model under the ambient temperature over $25^{\circ} \mathrm{C}$, the protection function may operate at a current of $92 \%$ to $111 \%$ of the rated load current.
7. Circuit-breaker type. To reset, turn the input power supply OFF, then after 1 min has elapsed, turn the input power supply ON again.
8. Do not press down on the terminal block with a force exceeding 75 N while tightening the terminals.
9. To ensure the emission ratings, a noise filter should be used on the output lines at the closest point. (3- to $50-\mathrm{W}$ models: S82Y-JF3-N, $90-\mathrm{W}$ and $100-\mathrm{W}$ models: S82Y-JF6-N)
10. To ensure the Emission Enclosure rating, a ferrite ring core should be used on all cables (for S82K-P24024).
11. To meet Class 2 requirement with $100-\mathrm{W}$ model, either a fuse or circuit breaker that is UL listed or CSA certified, and rated at 4.2 A max. should be used in the output of the power supply. Only then can the power supply output be considered as meeting Class 2.

(PFC specifications table continues on the next page.)
Note: 1. Defined with a $100 \%$ load and the rated input voltage ( 100 or 200 VAC)
2. The output specification is defined at the power supply output terminals.
3. When the ambient temperature exceeds $25^{\circ} \mathrm{C}$, the protection function may operate at a current of $92 \%$ to $111 \%$ of the rated load current.
4. Parallel operation is set with the Parallel/Single Operation Selector Switch.

Specifications Table PFC Models (S82K-P $\square \square \square 24$ ) - continued from previous page

| Item |  | Single output |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Power Rating |  | 90 W | 100 W | 240 W |
| Characteristics |  |  |  |  |
| Ambient temperature | Operating | See the derating curve in the Engineering Data section (no condensation or icing) |  |  |
|  | Storage | $-25^{\circ} \mathrm{C}$ to $65^{\circ} \mathrm{C}$ (no condensation or icing) |  |  |
| Ambient humidity | Operating | 25\% to 85\% |  |  |
|  | Storage | 25\% to 90\% |  |  |
| Dielectric strength |  | 3,000 VAC at $50 / 60 \mathrm{~Hz}$ for 1 min . (between all inputs and outputs) 2,000 VAC at $50 / 60 \mathrm{~Hz}$ for 1 min . (between all inputs and GR terminal) $1,000 \mathrm{VAC}$ at $50 / 60 \mathrm{~Hz}$ for 1 min . (between all outputs and GR terminal) Alarm current: 20 mA (90- and 100-W models) 25 mA (240-W models) |  |  |
| Insulation resistance |  | $100 \mathrm{M} \Omega \mathrm{min}$. at 500 VDC (between all outputs and all inputs/GR terminal) |  |  |
| Vibration resistance |  | Malfunction: 10 to $55 \mathrm{~Hz}, 0.375-\mathrm{mm}$ single amplitude for 2 hrs each in $\mathrm{X}, \mathrm{Y}$, and Z directions |  | Malfunction: 10 to $55 \mathrm{~Hz}, 0.15-\mathrm{mm}$ single amplitude for 2 hrs each in $X, Y$, and $Z$ directions |
| Shock resistance |  | Malfunction: $150 \mathrm{~m} / \mathrm{s}^{2}, 3$ times each in $\pm \mathrm{X}$, $\pm \mathrm{Y}$, and $\pm \mathrm{Z}$ directions |  | Malfunction: $300 \mathrm{~m} / \mathrm{s}^{2}, 3$ times each in $\pm X, \pm Y$, and $\pm Z$ directions |
| Screw tightening torque |  | $0.74 \mathrm{~N} \cdot \mathrm{~m}$ max. (See Note 2.) |  |  |
| Output indicator |  | Yes (Green) |  |  |
| Electromagnetic interference (See Note 1.) |  | Conforms to FCC class A |  |  |
| EMC (See Notes 3, 4.) |  |  |  |  |
| Approved standards |  | UL508 (Listing)/1950 Class 2 (UL1310)/Class 950) (See Note 5.) CSA C22.2 No. 14/No. (VDE160), EN60950 Conforms to VDE0106/P | 2 (CSA C22.2 No. 950, EN50178 /P100 | UL508 (Listing)/1012 CSA C22.2 No. 14/E.B. 1402C, EN50178 (VDE160), EN60950, Conforms to VDE0106/P100 |
| Weight |  | 1,000 g max. |  | 2,200 g max. |

(The notes below apply to this page only.)
Note: 1. Defined with a $100 \%$ load and the rated input voltage ( 100 or 200 VAC)
2. Do not press down on the terminal block with a force exceeding 75 N while tightening the terminals.
3. To ensure the Emission Enclosure ratings, a noise filter should be used on the output lines at the closest point. (90-and 100-W models: S82Y-JF6-N)
4. To ensure the Emission Enclosure rating, a ferrite ring core should be used on all cables.
5. To meet Class-2 requirements with the 100-W model, either a fuse or circuit breaker that is UL listed or CSA certified, and rated at 4.2 A max. should be used in the output of the power supply. Only then can the power supply output be considered as meeting Class 2.

## REFERENCE VALUE

| Item | Value | Definition |
| :--- | :--- | :--- |
| Reliability (MTBF) | 135,000 hrs min. | MTBF stands for Mean Time Between Failures, which is calculated according to the <br> probability of accidental device failures, and indicates reliability of devices. <br> Therefore, it does not necessarily represent a life of the product. |
| Life expectancy | 8 yrs. min. | The life expectancy indicates average operating hours under the ambient <br> temperature of $40^{\circ} \mathrm{C}$ and a load rate of $50 \%$. Normally this is determined by the life <br> expectancy of the built-in aluminum electrolytic capacitor. |

## Engineering Data

## - DERATING CURVE

3-/7.5-/15-/30-/50-/100-W Models Single-Unit Operation

100-W Models without PFC
Parallel-Unit Operation

Ambient temperature $\left({ }^{\circ} \mathrm{C}\right)$

100-W Models with PFC
Parallel-Unit Operation

Note: When using the $7.5-\mathrm{W}$ single-output models within the input voltage range between 90 and 110 VDC, the load rate will become $90 \%$ or less.

90-W Models
Single-Unit Operation

240-W Model
Single-Unit Operation

Note: $100-$ VAC input: 85 to 132 VAC

240-W Model
Parallel-Unit Operation

Note: 100-VAC input: 85 to 132 VAC

## Mounting Position

The derating curve can be ensured for these two kinds of installations.
(A) Standard (Vertical) Installation

Top

(B) Horizontal Installation

Note: Horizontal installation is not permitted for 240-W models.

## OVERLOAD PROTECTION

The Power Supply is provided with an overload protection function that protects the load and the power supply from possible damage by overcurrent. When the output current rises above a set value (refer to the table below), the protection function is triggered, decreasing the output voltage. When the output current falls within the rated range, the overload protection function is automatically cleared.

|  | Single output |  | Dual outputs7.5 W | Single output |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3 W | 7.5 W |  | 15 W | 30 W | 50 W | 90 W | 100 W | 240 W |
| Set value | $105 \%$ to $160 \%$ of rated load current <br> (See Note 1.) |  | $105 \%$ to 250\% of rated load current | $105 \%$ to $160 \%$ of rated load current |  |  | $101 \%$ to 111\% of rated load current (See Notes 2 and 3.) | 105\% to load curr (See Not | of rated |
| Operation | Inverted L drop type, automatic reset |  |  |  | Inverted L drop/intermittent operation type, automatic reset |  | Inverted L drop type, automatic reset |  |  |

Note: 1. When using the $7.5-\mathrm{W}$ single-output models within the input voltage range between 90 and 110 VDC, the overload protection function will operate at currents from $95 \%$ to $160 \%$ of the rated load current.
2. When using the $90-\mathrm{W}$ model at an ambient temperature exceeding $25^{\circ} \mathrm{C}$, the overload protection function will operate at currents from $92 \%$ to $111 \%$ of the rated load current.
3. When using the $100-\mathrm{W}$ model with PFC in parallel operation, the overload protection function will operate at currents from 3.78 to 4.2 A .

Note: Do not short-circuit the output terminals of the S82K or use the S82K with excessive output current for a long time, otherwise the internal circuitry of the S82K may be deteriorated or damaged.

## When Using Dual Output (+/-) Models

The +V output detects the total output power (+V output and -V output) to trigger the short-circuit protection against overcurrent. This protection varies depending on the -V output state. The -V output independently triggers the short-circuit protection.

## OVERVOLTAGE PROTECTION (S82K-24024T ONLY)

The Power Supply is provided with an overvoltage protection function that protects the load and the Power Supply from possible damage by overvoltage. When the output voltage rises above a set value, the protection function is triggered, shutting off the output voltage. If this occurs, reset the Power Supply by turning it off for 1 minute min. and then turning it on again.

INRUSH CURRENT, STARTUP TIME, HOLD TIME

## Operation

## UNDERVOLTAGE ALARM INDICATOR AND OUTPUT FUNCTION (ALL MODELS EXCEPT S82K-24024/P24024)

If the output voltage at the output terminal drops to $75 \%$ to $90 \%$ of the rated voltage, the red indicator of the S82K (DC LOW indicator) will be lit. In the case of the $90-\mathrm{W}, 100-\mathrm{W}$ and S82K-24024T, a voltage drop alarm will be output via the relay available in the models (DC LOW output).
This function detects the voltage at the output terminal of the Power Supply. To check the precise output voltage, measure the voltage at the terminal of the load.
$\left.\begin{array}{|ll|l|l|}\hline \text { Indicator } & & \text { Voltage } & \begin{array}{l}\text { Operation of 90-W, 100-W, } \\ \text { S82K-24024T's output (DC LOW } \\ \text { output) }\end{array} \\ \hline \begin{array}{l}\text { Green: }\end{array} & \text { DCee Note 2.) }\end{array}\right]$

Note: 1. The more the voltage at the output terminal drops, the darker both the green and red indicators will be.
2. The relay contacts have a capacity of 0.1 A at 24 VDC .
3. The red indicator will actually first light at a voltage between $75 \%$ and $90 \%$ of the rated voltage.

## BLOCK DIAGRAMS

## S82K-003 $\square \square$ (3 W)

S82K-007 $\square \square$ (7.5 W, Single Output)

S82K-007 $\square \square$ (7.5 W, Dual Outputs)

S82K-015 $\square$ (15 W)
S82K-030 $\square(30 \mathrm{~W})$
S82K-05024 (50 W)

S82K-09024 (90 W)
S82K-10024 (100 W)

Note: Use the short bar to short-circuit terminals 7 and 8 to select 100 to 120 VAC and remove the short bar to select 200 to 240 VAC.

S82K-P09024 (90 W)
S82K-P10024 (100 W)

Note: Use the short bar to short-circuit terminals 7 and 8 to select 100 to 120 VAC and remove the short bar to select 200 to 240 VAC.

## S82K-24024 $\square$ (240 W)

Note: 1. The overvoltage protection circuitry and undervoltage alarm indicator/output are available in the S82K-24024T only.
2. Use the short bar to short-circuit terminals 7 and 8 to select 100 to 120 VAC and remove the short bar to select 200 to 230 VAC.

## S82K-P24024 (240 W)

## Dimensions

## Unit: mm (inch)

S82K-015 $\square \square$
(Dual outputs)

S82K- $\square 09024 /$
S82K- $\square 10024$

## Precautions

## WARNING

Do not attempt to disassemble the Power Supply or touch its internal parts while power is being supplied. Doing so may result in electric shock.

Do not touch the terminals of the Power Supply within one minute after power has been turned OFF. Doing so may result in electric shock due to a residual voltage.

Do not touch the Power Supply Unit while power is being supplied or immediately after power has been turned OFF. Doing so may result in a skin burn due to high temperature of the Power Supply.

## MOUNTING

To improve and maintain the reliability of the Power Supply over a long period of time, consider the heat dissipation.

The Power Supply is designed to dissipate heat by means of natural air-flow. Mount the Power Supply so that air flow takes place around the Power Supply.

When mounting two or more Power Supplies side-by-side, allow at least 20 mm ( 0.79 in ) spacing between them, as shown in the following illustration.

Forced-air cooling is recommended.

To mount the Power Supply on a DIN rail, hook portion (A) of the Power Supply to the rail and press the Power Supply toward direction (B).

## REMOVAL

To remove the Power Supply, pull down portion (C) with a flat-blade screwdriver and pull out the Power Supply.

When tightening the terminals, do not tighten the terminal block to a torque greater than 75 N .

## SELECTION OF 100 TO 120 VAC OR 200 TO 240 VAC INPUT VOLTAGE

 (S82K- $\square 09024 /-\square 10024 /-24024 /-24024 T$ )Select a 120 V or 240 V input by shorting or opening the Input Voltage Selector Terminals, as shown in the following diagram.

The default setting is 240 V .

## 100-V to $\mathbf{1 2 0 - V}$ Input

Note: Use the short bar to short-circuit terminals 7 and 8.

200-V to 240-V Input

88

Note: Remove the short bar

## GENERATING OUTPUT VOLTAGE ( $\pm$ )

An output of $\pm$ can be generated by using two Power Supplies (as shown below) because the Power Supply produces a floating output.

When connecting the Power Supplies in series with an operation amplifier, connect diodes to the output terminals as shown by the dotted lines in the figure. No diodes are required with S82K 90-/100-/240-W models.

## WIRING

To prevent incorrect wiring of the input/output terminals, pay attention to their polarities.

## BATTERY CHARGING

With S82K- $\square 09024 /-\square 10024 /-24024 \mathrm{~T}$ models, a reduction in lifetime due to over discharge of the battery can be prevented using the DC LOW output. (Discharge can be interrupted at 0.75 to $0.9 \times 24 \mathrm{~V}$.)

## SERIES OPERATION

S82K 90-W/100-W/240-W models can be operated in series. It must be noted that the + output of the $7.5-\mathrm{W}$ dual output model cannot be connected in series to its - output.

## 90-W/100-W/240-W Models

3-, 7.5-, 15-, 30-, 50-W Models

## PARALLEL OPERATION

S82K 100-W/240-W models can be operated in parallel. Perform parallel operation with power supplies satisfying the same specifications.

100-W and 240-W Models

Note: When operating the S82K-P10024 or 240-W model in parallel operation, set the switch to "PARALLEL."

-operation | a Paralle - -1 |
| :--- |
| 1 |
| 1 |
| 1 | Refer to the derating curve for the rated current under this operation.

3-, 7.5-, 15-, 30-, 50- and 90-W Models

## PARALLEL OPERATION PRECAUTIONS

- The length and thickness of each wire connected to the load must be the same so there is no difference in voltage drop value between the load and the output terminals of each Power Supply.
- Adjust the output voltage of each Power Supply so there will be no difference in output voltage between each Power Supply.
- If the S82K-P10024 or 240-W Power Supply is used in single operation under the parallel operation setting, the overcurrent protection will be actuated at an output of $90 \%$ to $95 \%$ (in current) and will not allow a $100 \%$ output.
- If the S82K-P10024 or 240-W Power Supplies are used in parallel operation under the single operation setting, one of them will operate at $110 \%$ output, causing severe heat derating and shortening the service life.

## Minimum Output Current

The minimum output current of the S82K-00727 and S82K-00728 is restricted by the output voltage and control method.
Note: All the outputs of the S82K-00727 and S82K-00728 are controlled by the +V output. If the +V output current falls to $10 \%$ or less of the rated output, the -V output voltage may drop.

## Operating and Storage Environments

To avoid deterioration of the operating characteristics or malfunction, do not use or store the Unit in locations subject
to the following conditions:

- Direct sunlight.
- Ambient operating temperatures outside the range indicated by the derating curve.
- Ambient operating humidity outside the range of $25 \%$ to 85\%.
- Condensation as the result of severe changes in temperature.
- Ambient storage temperatures outside the range of $-25^{\circ} \mathrm{C}$ to $65^{\circ} \mathrm{C}$.
- Corrosive or flammable gases.
- Dust (especially iron dust) or salts.
- Shock or vibration.
- Exposure to water, oil, or chemicals.
