Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

User Manual for the SDAH01 Evaluation Kit for the HS3001 Humidity and Temperature Sensor

Description

The SDAH01 Evaluation Kit is used to assess the HS3001 High-Performance Relative Humidity and Temperature Sensor. The hardware allows users to perform data logging experiments, and it can communicate through a standard USB interface with the user's computer using the *IDT Demo Software.* This software makes it possible to view measurements in real-time, adjust the resolution of the sensor, configure measurement parameters, and download previously logged measurements. The Evaluation Board can be powered directly from the USB port of the user's computer or from a 1632 coin cell battery to enable fully autonomous (untethered) data logging.

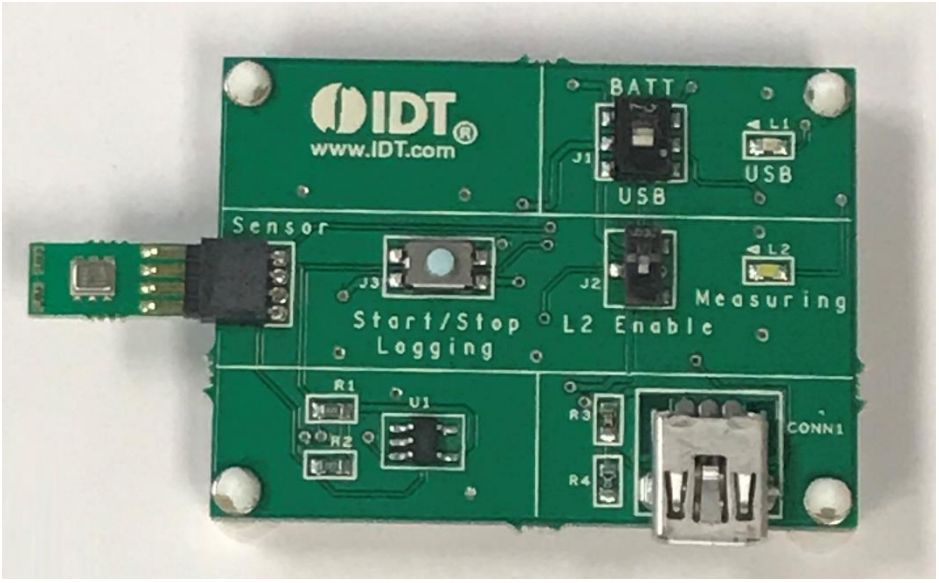
Kit Contents

- SDAH01 Evaluation Board
- 3 HS3001 Sensor Modules
- Sensor Module Extension Cable
- USB Key (flash drive) with the *IDT Demo Software*
- USB Cable
- *Quick Start Guide*
- *User Manual for the SDAH01 Evaluation Kit*

Features

- SDAH01 Evaluation Board operating temperature: -40°C to 85°C
- Relative Humidity Sensor Module with HS3001 sensor sample mounted:
  - RH accuracy: ±1.5%RH
  - Operating temperature: -40 to 105°C
- USB key containing the *IDT Demo Software:*
  - Data plotter
  - Measurement resolution configuration
  - Data export
- Sensor Module Extension Cable allows extending the HS3001 Sensor Module to different measurement areas

SDAH01 Evaluation Kit



Important Notes

Disclaimer

Integrated Device Technology, Inc. and its affiliated companies (herein referred to as "IDT") shall not be liable for any damages arising out of defects resulting from

(i) delivered hardware or software

(ii) non-observance of instructions contained in this manual and in any other documentation provided to user, or

(iii) misuse, abuse, use under abnormal conditions, or alteration by anyone other than IDT.

TO THE EXTENT PERMITTED BY LAW, IDT HEREBY EXPRESSLY DISCLAIMS AND USER EXPRESSLY WAIVES ANY AND ALL WARRANTIES, WHETHER EXPRESS, IMPLIED, OR STATUTORY, INCLUDING, WITHOUT LIMITATION, IMPLIED WARRANTIES OF MERCHANTABILITY AND OF FITNESS FOR A PARTICULAR PURPOSE, STATUTORY WARRANTY OF NON-INFRINGEMENT, AND ANY OTHER WARRANTY THAT MAY ARISE BY REASON OF USAGE OF TRADE, CUSTOM, OR COURSE OF DEALING.

Restrictions in Use

IDT's SDAH01 Evaluation Kit consisting of the SDAH01 Evaluation Board, HS3001 Sensors, cables, documentation, and *IDT Demo Software* are designed to provide a quick setup for taking RH% and temperature measurements with the HS3001 only. IDT's SDAH01 Evaluation Kit and *IDT Demo Software* must not be used for any mission-critical applications, end-customer products, or measurement reference source.

Contents

List of Figures

1. Setup

1.1 User Computer Requirements and Setup

1.1.1 Computer Requirements

A Windows®-based computer is required for interfacing with the kit and configuring the part. The user must have administrative rights on the computer to install the *IDT Demo Software* for the kit.

The computer must meet the following minimum systems requirements:

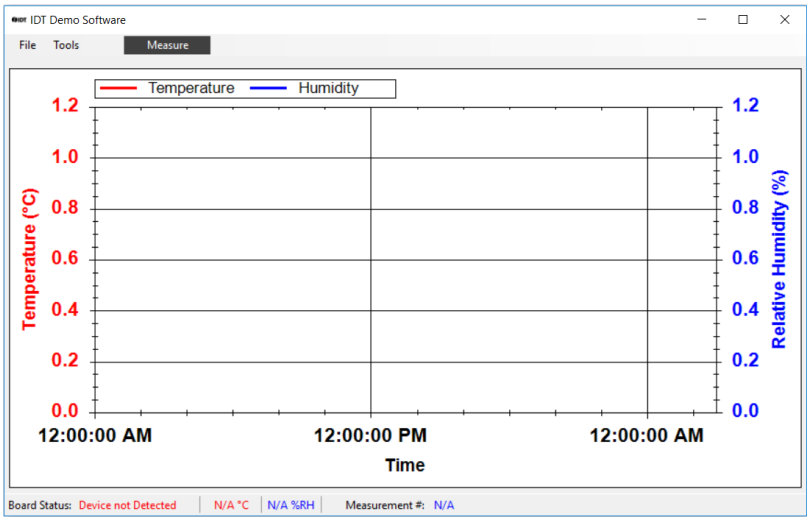
- CPU: Intel or compatible
- RAM: 512 MByte
- Windows® XP / Vista / 7 / 8 / 10
- Ports: One available US port

1.1.2 Software Installation and Setup

Follow these procedures to install the *IDT Demo Software*:

1. Plug in the USB flash drive to start the setup.
2. If the setup process does not start automatically, double-click on the *Setup.exe* file.

Figure 1. Initial Display after Installation of the *IDT Demo Software*



1.2 Kit Hardware Connections

Follow these procedures to set up the kit as shown in Figure 2:

A. Install the software from the USB flash drive as described in section 1.1.2.

B. Connect one of the HS3001 sensor modules facing up, with or without the extension cable attached, into the sensor module connector ① .

C. Connect the USB port ② of the board to the user's computer using the supplied USB cable, and ensure that the power switch ③ on the board is in the *USB* position. The "USB" LED ④ will light.

D. Run the *IDT Demo Software* package from the Start menu, and click on the "Measure" button ⑤ . The "Measuring" indicator ⑥ will blink whenever data is being captured.

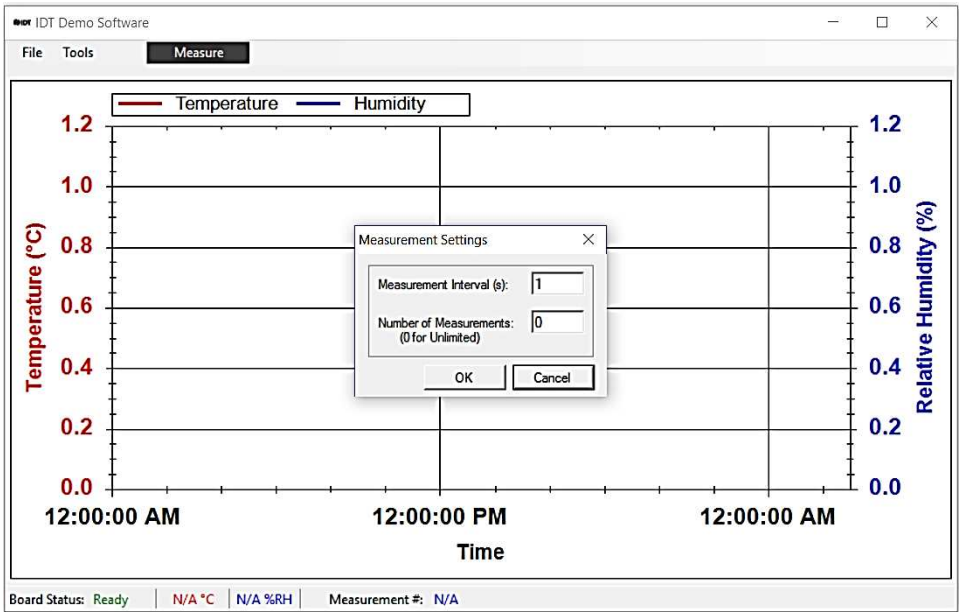
2. Usage Guide

2.1 Measurement Settings

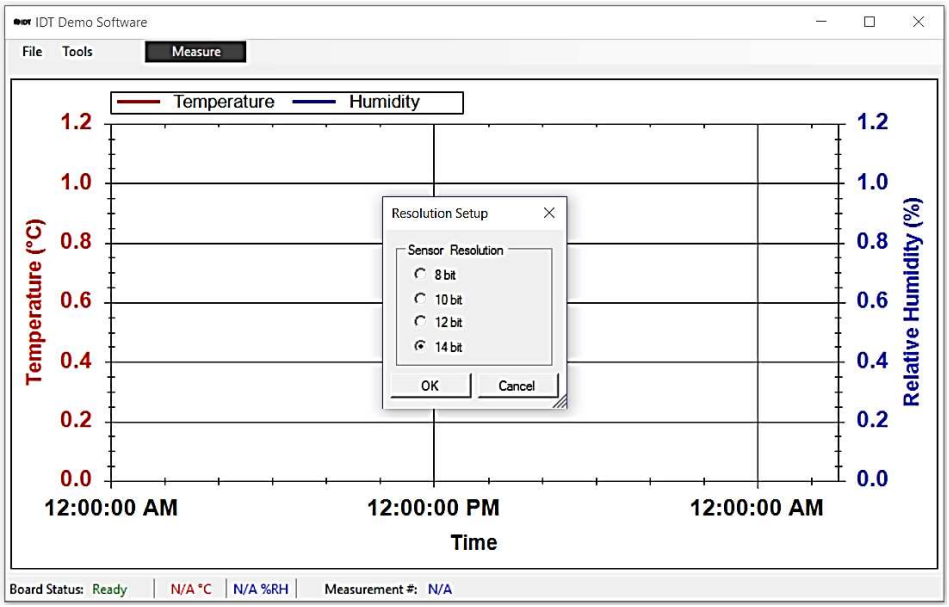
To change the interval and number of measurements to be made, select *Measurement Settings* from the *Tools* menu, enter the desired values, and then click OK, as shown in Figure 3. See section 2.1 for the range of valid settings for these two entry fields.

Figure 3. Measurement Settings



To change the measurement resolution, select *Set Resolution* from the *Tools* menu, select the desired resolution, and then click OK, as shown in Figure 4. The resolution setting is stored on the sensor, and it will be the default value applied when measurements are started. Measurement settings can be changed only when no measurements are being taken.

Figure 4. Set Resolution



2.2 Exporting Data

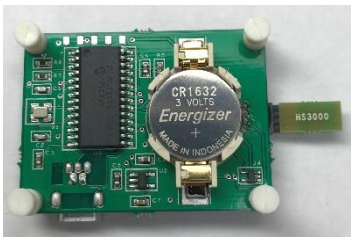
The data displayed in the plotter area can be exported in two different formats.

- To export the measured data points in a Microsoft Excel® compatible comma-separated text file, select *Save Data* from the *File* menu. Create a filename for the data, and select the location where the file will be saved.
- To export the plots themselves as a picture file, right click on the plot area and select *Save Image As*. Create a file name, select the location, and select the file type for the image.

2.3 Data Logging Mode (Untethered)

Disconnect the kit from the computer. Ensure that a battery is inserted in the battery holder on the back of the board with the positive battery terminal facing away from the board, as shown in Figure 5.

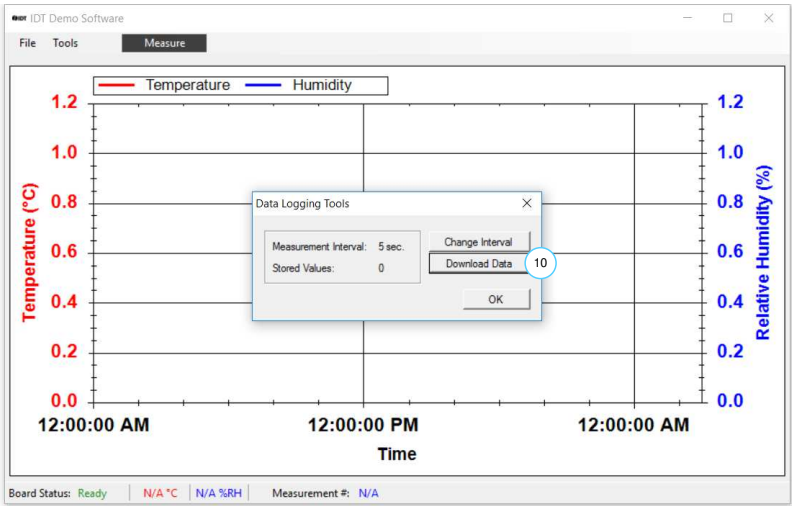
Figure 5. Battery Installation



The following steps describe how to operate the kit in the data logging mode (see Figure 2).

1. To set the board to the data logging mode, put the power switch ③ in the “Batt” position.
2. To start data logging, hold the “Start/Stop Logging” button ⑦ for 3 seconds. The “Measuring” indicator ⑥ will light for 2 seconds and then start blinking on every logged measurement. This can be disabled to extend the battery life by toggling the “L2 Enable” switch ⑧.
3. To stop data logging, press the “Start/Stop Logging” button. The “Measuring” indicator blinks 3 times to indicate the end of data logging.
4. To download the logged data to the *IDT Demo Software*, connect the USB port ② to the computer using the supplied USB cable, and ensure that the power switch ③ on the board is in the USB position. The “USB” LED ④ will light.
5. In the software, select *Data Logging* from the *Tools* menu and click on the *Download Data* button ⑩ as shown in Figure 6. The maximum number of measurements that can be stored on the board is 2000.

Figure 6. Download Data to IDT Demo Software



2.4 Data Logging Settings

To change the data logging measurement interval, select *Data Logging* from the *Tools* menu, and then click on *Change Interval.* Enter the desired measurement interval, and click *OK.*

The data logging resolution can be selected in the same fashion as described in section 2.1.

Data logging settings can only be changed when no measurements are being taken.

2.5 Using the Plotter

The plotter ⑨ displays the measured relative humidity and temperature data simultaneously versus time (see Figure 2).

- Hold the left mouse button, and drag it around an area to zoom onto that area.
- Hold the middle mouse or scroll button, and drag to pan across the plot area.
- To undo a zoom or pan operation, right click on the plot area, and select *Un-Zoom (Un-Pan).*
- The plot area can always be reset to the default view by right clicking on the plot area and selecting *Undo All Zoom/Pan.*
- To display the measurement points on the plotted curves, right click on the plot area and select *Show Data Points.* While moving the application window, measurements points will not be plotted.

2.6 Valid Settings Ranges

Measurement settings can be selected within the following ranges:

- Measurement interval: 0.5 to 3600 s.
- Number of measurements: 1 to unlimited.
- Data logging interval: 1 to 250 s.
- Measurement resolution: 8, 10, 12, 14 bits.

3. Ordering Information

Orderable Part Number	Description
SDAH01	SDAH01 Evaluation Kit, including SDAH01 Evaluation Board, HS3001 sensor modules, sensor module extension cable, USB key with *IDT Demo Software*, USB cable, *Quick Start Guide, User Manual for the SDAH01 Evaluation Kit*

4. Revision History

Revision Date	Description of Change
November 16, 2017	Initial release.
