LIDAR-Lite is a laser rangefinder that emits laser radiation. This Laser Product is designated Class 1 during all procedures of operation. This means that the laser is safe to look at with the unaided eye. However, it is very advisable to avoid looking into the beam and power the module off when not in use.

No regular maintenance is required for LIDAR-Lite. In the event that the unit becomes damaged or is inoperable, repair or service of LIDAR-Lite is only to be handled by authorized, factory-trained technicians. No service of LIDAR-Lite by the user is allowed. Attempting to repair or service the unit on your own can result in direct exposure to laser radiation and the risk of permanent eye damage. For repair or service please contact PulsedLight directly for a return authorization.

No user should modify LIDAR-Lite or operate it without its housing or optics. The operation of LIDAR-Lite without a housing and optics or modification of the housing or optics that exposes the laser source may result in direct exposure to laser radiation and the risk of permanent eye damage. Removal or modification of the diffuser in front of the laser optic may result in the risk of permanent eye damage.

Caution – Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure. PulsedLight is not responsible for injuries caused through the improper use or operation of this product.

Pin	Description
PIN1	POWER_IN - 4.75-5.5V DC Nominal, Maximum 6V DC. Peak current draw from this input (which occurs during acquisition period) is typically < 100 mA over a duration from 4 to 20ms depending on received signal strength. Unless you use power management, the unit will draw 80 mA between acquisition times.
PIN2	POWER_EN - Active high, enables operation of the 3.3V micro-controller regulator. Low puts board to sleep, draws <40 $\mu$ A. (Internal 100K pull-up)
PIN3	Mode Select - Provides trigger (high-low edge) PWM out (high)
PIN4	I2C Clock (SCL)

PIN5	I2C Data (SDA)
PIN6	Signal/power ground.

## J2 - Secondary signal/power - .1" spacing Molex style through hole (Factory Option Only)

Pin	Description
PIN1	Laser Bypass 5-20V max (nominally connected to pin 2 through inductor L8 - removed for external power)
PIN2	POWER_IN - 4.75-5.5V DC Nominal, Maximum 6V DC
PIN3	POWER_EN - Active high
PIN4	External reference clock input (Factory Option - Consult Factory)
PIN5	Signal/power ground.
PIN6	Detector bias - up to 25V external bias for PIN, external bias input 200V for APD (consult factory)
