

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Current Mode PWM Controller

Description

The SG1844/45 family of control ICs provides all the required features to implement off-line Fixed Frequency, Current-mode switching power supplies with a minimum number of external components. Current-mode architecture demonstrates improved line regulation, improved load regulation, pulse-by-pulse current limiting and inherent protection of the power supply output switch.

The Bandgap reference is trimmed to $\pm 1\%$ over temperature. Oscillator discharge current is trimmed to less than $\pm 10\%$. The SG1844/45 has under-voltage lockout, current-limiting circuitry and start-up current of less than 1mA. The totem-pole output is optimized to drive the gate of a power MOSFET. The output is low in the off state to provide direct interface to an N-channel device. Both operate up to a maximum duty cycle range of zero to $< 50\%$ due to an internal toggle flip-flop which blanks the output off every other clock cycle. The SG1844/45 is specified for operation over the full military ambient temperature range of -55°C to 125°C . The SG3844/45 is designed for the commercial range of 0°C to 70°C .

Features

- Optimized for Off-Line Control
- Low Start-Up Current ($< 1\text{mA}$)
- Automatic Feed Forward Compensation
- Trimmed Oscillator
- Discharge Current
- Pulse-By-Pulse Current Limiting
- Enhanced Load Response Characteristics
- Undervoltage Lockout with 6V Hysteresis (SG1844 only)
- Double Pulse Suppression
- High-Current Totem-Pole Output
- Internally Trimmed Bandgap Reference
- 500kHz Operation
- Under-voltage Lockout
- SG1844 - 16 Volts
- SG1845 - 8.4 Volts
- Low Shoot-through Current $< 75\text{mA}$ Over Temperature

Application

- Available to MIL-STD-883
- Available to DSCC
 - Standard Microcircuit Drawing (SMD)
- SGR1844/45 Rad-Tolerant Version Available

Notes:

- Contact factory for DESC part availability.
- All parts are viewed from the top.
- Available in Tape & Reel. Append the letters "TR" to the part number. (i.e. SG3844D-TR)
- Hermetic Packages J, F, L, & Y use Pb37/Sn63 hot solder lead finish, contact factory for availability of RoHS versions.

Absolute Maximum Ratings^{1 - 2}

Parameter	Value	Units
Supply Voltage (Low Impedance Source)	30	V
Output Current (Peak)	±1	A
Output Current (Continuous)	350	mA
Output Energy (Capacitive Load)	5	μJ
Analog Inputs (V _{FB} , I _{SENSE})	-0.3 to +6.3	V
Error Amplifier Output Sink Current	10	mA
Operating Junction Temperature		
Hermetic (J, Y, F, L Packages)	150	°C
Plastic (M, D, DM Packages)	150	°C
Storage Temperature Range	-65 to +150	°C
Lead Temperature (Soldering, 10 Seconds)	300	°C
RoHS / Pb-free Peak Package Solder Reflow Temp. (40 second max. exposure)	260 (+0, -5)	°C
<i>Notes:</i>		
1. Exceeding these ratings could cause damage to the device.		
2. All voltages are with respect to Pin 5. All currents are positive into the specified terminal.		

Thermal Data

Parameter	Value	Units
M Package:		
Thermal Resistance-Junction to Ambient, θ _{JA}	95	°C/W
DM Package:		
Thermal Resistance-Junction to Ambient, θ _{JA}	165	°C/W
D Package:		
Thermal Resistance-Junction to Ambient, θ _{JA}	120	°C/W
Y Package:		
Thermal Resistance-Junction to Case, θ _{JC}	30	°C/W
Thermal Resistance-Junction to Ambient, θ _{JA}	130	°C/W
J Package		
Thermal Resistance-Junction to Case, θ _{JC}	30	°C/W
Thermal Resistance-Junction to Ambient, θ _{JA}	80	°C/W
F Package		
Thermal Resistance-Junction to Case, θ _{JC}	80	°C/W
Thermal Resistance-Junction to Ambient, θ _{JA}	145	°C/W
L Package		
Thermal Resistance-Junction to Case, θ _{JC}	35	°C/W
Thermal Resistance-Junction to Ambient, θ _{JA}	120	°C/W
<i>Notes:</i>		
Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$.		
The θ _{JA} numbers are guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.		

Recommended Operating Conditions³

Symbol	Parameter	Recommended Operating Conditions			Units
		Min.	Typ.	Max.	
V _S	Supply Voltage Range		30		V
I _{PK}	Output Current (Peak)		±1		A
I _{OUT}	Output Current (Continuous)		200		mA
	Analog Inputs (Pin 2, Pin 3)	0		2.6	V
E _{AISNK}	Error Amp Output Sink Current		5		mA
OSC _{FR}	Oscillator Frequency Range	0.1		500	kHz
R _T	Oscillator Timing Resistor	0.52		150	kΩ
C _T	Oscillator Timing Capacitor	0.001		1.0	μF
Operating Ambient Temperature Range:					
	SG1844/45	-55		125	°C
	SG3844/45	0		70	°C

Note:
3. Range over which the device is functional.

Electrical Characteristics

Unless otherwise specified, these specifications apply over the operating ambient temperatures for SG1844/SG1845 with $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$, SG3844/SG3845 with $0^{\circ}\text{C} \leq T_A \leq 70^{\circ}\text{C}$, V_{CC} = 15V (Note 7), R_T = 10kΩ, and C_T = 3.3nF. Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.

Application Information

The oscillator of the 1844/45 family of PWM's is programmed by the external timing components (R_T , C_T) as shown in Figure 14.

Figure 14 · Oscillator Timing Circuit

Figure 15 · Oscillator Frequency vs. R_T for various C_T

Typical Application Circuits

Pin numbers referenced are for 8-pin package and pin numbers in parenthesis are for 14-pin package.

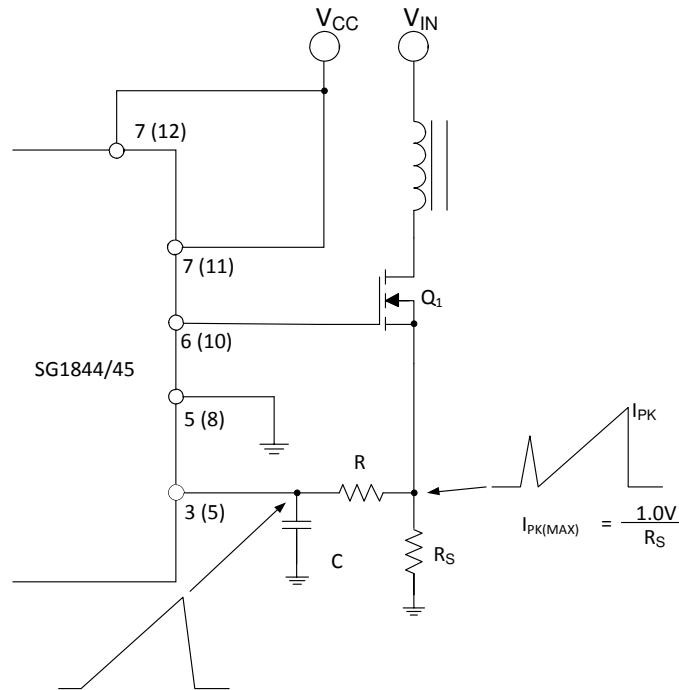

Figure 16 · Current Sense Spike Suppression

The RC low-pass filter will eliminate the leading edge current spike caused by parasitic of Power MOSFET.

Figure 17 · MOSFET Parasitic Oscillations

A resistor (R_1) in series with the MOSFET gate reduce overshoot and ringing caused by the MOSFET input capacitance and any inductance in series with the gate drive. (Note: It is very important to have a low inductance ground path to insure correct operation of the I.C. This can be done by making the ground paths as short and as wide as possible.)

Figure 18 · Bipolar Transistor Drive

The 1844/45 output stage can provide negative base current to remove base charge of power transistor (Q_1) for faster turn off. This is accomplished by adding a capacitor (C_1) in parallel with a resistor (R_1). The resistor (R_1) is to limit the base current during turn on.

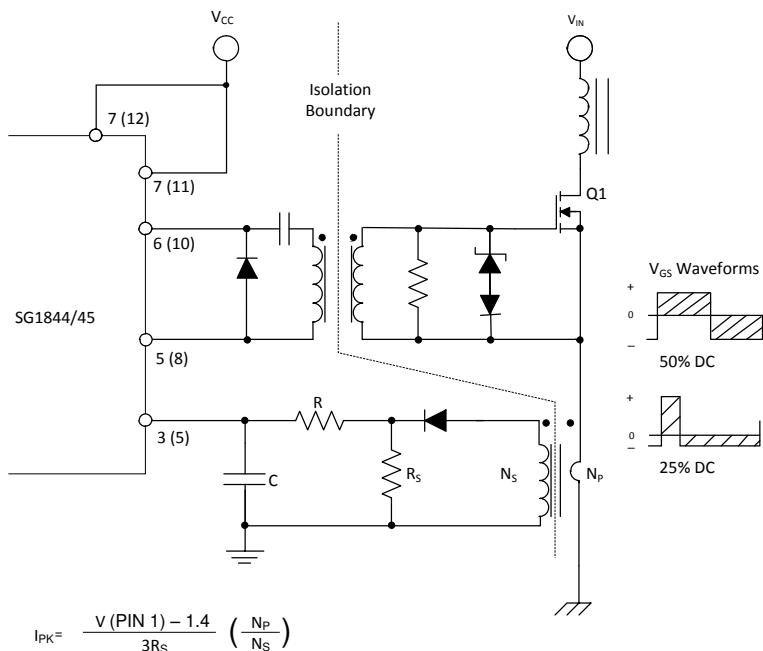

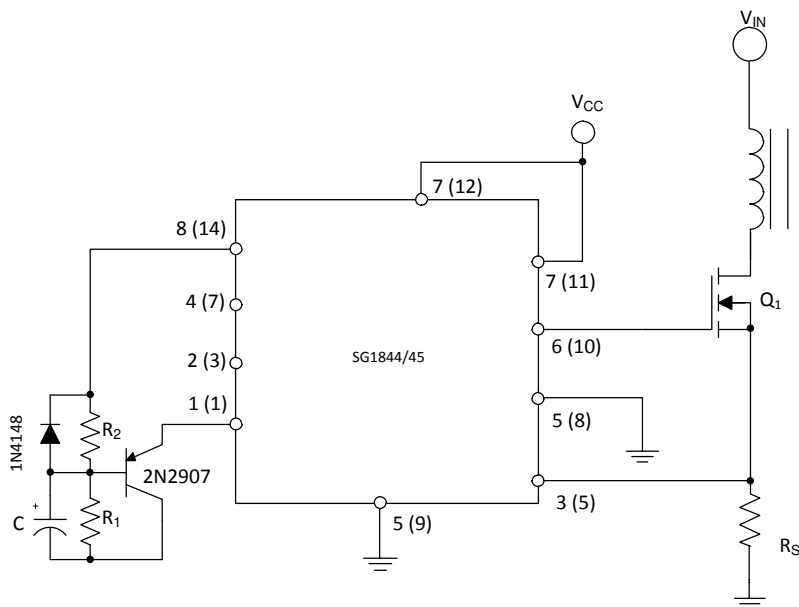

Figure 19 · Isolated MOSFET Drive

Current transformers can be used where isolation is required between PWM and Primary ground. A drive transformer is then necessary to interface the PWM output with the MOSFET.

$$I_{PK} = \frac{V_1}{R_S} \quad \text{Where, } 0 \leq V_1 \leq 1.0 \text{ V}$$

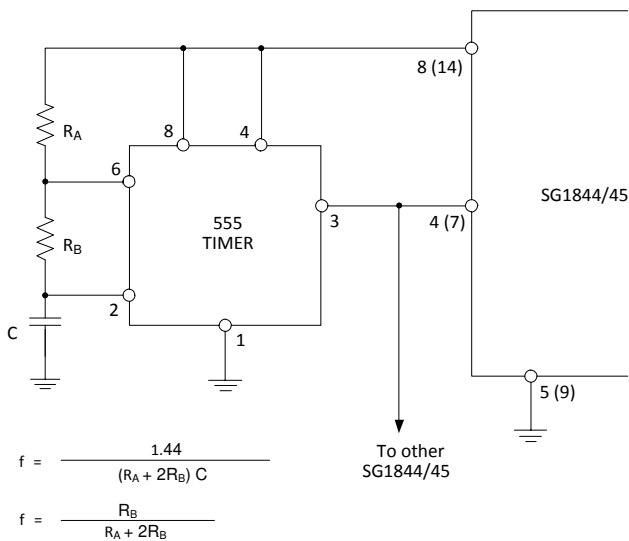

$$\text{and } V_1 = \frac{1.43 - 0.23 \frac{R_1}{R_2}}{1 + \frac{R_1}{R_2}}$$

$$t_{SOFTSTART} = -\ln\left[\frac{V_C}{R_2}\right] C \frac{R_1 R_2}{R_2 + R_2}$$

$$\text{Where, } V_2 = \frac{0.05}{1 + \frac{R_1}{R_2}}$$

Figure 20 · Adjustable Buffered Reduction of Clamp Level with Softstart

Softstart and adjustable peak current can be done with the external circuitry shown above.

$$f = \frac{1.44}{(R_A + 2R_B) C}$$

$$f = \frac{R_B}{R_A + 2R_B}$$

Figure 21 · External Duty Cycle Clamp and Multi-Unit Synchronization

Precision duty cycle limiting for a duty cycle of <50%, as well as synchronizing several 1844/45's is possible with the above circuitry.

Figure 22 · Oscillator Connection

The oscillator is programmed by the values selected for the timing components R_T and C_T . Refer to application information for calculation of the component values.

Figure 23 · Error Amplifier Connection

Error amplifier is capable of sourcing and sinking current up to 0.5mA.

PACKAGE OUTLINE DIMENSIONS
