

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Product Description

The SGL-0163 is a high performance SiGe HBT MMIC low noise amplifier featuring one-micron emitters with FT up to 50GHz. This device has an internal temperature compensation circuit permitting operation directly from supply voltages as low as 2.5V. The SGL-0163 has been characterized at $V_D=3V$ for low power and 4V for medium power applications. Only two DC-blocking capacitors, a bias resistor, and an optional RF choke are required for operation from 800MHz to 1300MHz.

Optimum Technology Matching® Applied

- GaAs HBT
- GaAs MESFET
- InGaP HBT
- SiGe BiCMOS
- Si BiCMOS
- SiGe HBT
- GaAs pHEMT
- Si CMOS
- Si BJT
- GaN HEMT
- InP HBT

Features

- Internally Matched to 50Ω 800MHz to 1300MHz
- High Input/Output Intercept
- Low Noise Figure: 1.2dB Typ. at 900MHz
- Low Power Consumption
- Single Voltage Supply Operation
- Internal Temperature Compensation

Applications

- Receivers, GPS, RFID
- Cellular, Fixed Wireless, Land Mobile

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

RoHS status based on EU Directive 2002/95/EC (at time of this document revision).

The information in this publication is believed to be accurate and reliable. However, no responsibility is assumed by RF Micro Devices, Inc. No license is granted by implication or otherwise under any patent or patent rights of RFMD. RFMD reserves the right to change component circuitry, recommended application circuitry and specifications at any time without prior notice.

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias Conditions should also satisfy the following expression:

$$I_D V_D < (T_J - T_{LJ}) / R_{TH, j-l}$$

100MHz to 800MHz Operation

The useful range of the SGL-0163(Z) may be extended down to 100MHz using simple lumped element tuning. Following are two examples:

Option 1: A series inductor introduced at the input and output optimizes RF performance over 100MHz wide bands. Band center is selected by adjustment of the inductor values. the example is optimized for the 400MHz to 500MHz band.

Option 2: An RC feedback network provides broadband RF performance from 100MHz to 800MHz. The resistor value may be adjusted to select a combination of gain/NF/return loss best suited to the particular application.

Data and schematics for these two options are presented below.

Rb1 ²	Resistor, SM, 0603	47Ω	PHILLIPS 9C06031A47R0 JL HFT
Rb2	Resistor, SM, 0603	0Ω	PHILLIPS 9C06031A0R00 JL HFT
N/A ¹	Circuit Board	N/A	ECB101761 Rev B

Notes:

1. Circuit board dielectric material is GETEK, ML200C.
2. B1 and Rb1 recommended for improved K-factor but are optional. Replace with 0Ω resistor if not used.

Pin	Function	Description
1	NC	No electrical connection. Provide an isolated (ungrounded) solder pad for mounting integrity.
3	RF IN	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
4	DC BIAS	Voltage supply connection. Bypass with suitable capacitors.
2, 5	GND	Connection to ground. Provide via holes as close to the device ground leads as possible to reduce ground inductance and achieve optimum RF performance.
6	RF OUT/ BIAS	RF output and voltage supply. DC voltage is present on this pin, therefore a DC blocking capacitor is necessary for proper operation.

SOT-363 PCB Pad Layout

Notes:

1. Provide a ground pad area under device pins 2 & 5 with plated via holes to the PCB ground plane.
2. We recommend 1 or 2 ounce copper. Measurements for this data sheet were made on a 31 mil thick Getek with 1 ounce copper on both sides.

800 MHz to 1300 MHz Application Circuit

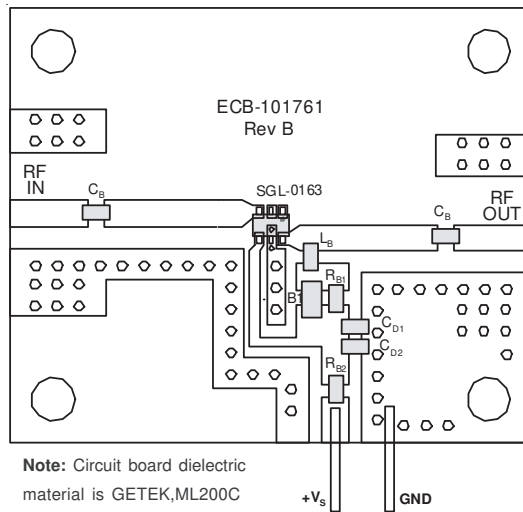

NOTE: Pin 1 must be electrically floating. Do not connect to ground. Provide an isolated solder pad for mounting integrity.
