

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## BROADCAST MECHANICAL TUNING AM/FM/SW RADIO RECEIVER

### Features

- Worldwide FM band support (64–109 MHz)
- Worldwide AM band support (504–1750 kHz)
- SW band support (2.3–28.5 MHz)
- No manual alignment necessary
- Stereo audio output
- Selectable support AM/FM/SW regional bands
- Enhanced FM/SW band coverage
- Station and stereo LED indicators
- China TV channels audio carrier reception in FM band
- Automatic frequency control (AFC)
- Integrated LDO regulator
- 2.0 to 3.6 V supply voltage
- Wide range of ferrite loop sticks and air loop antennas supported
- 16-pin SOIC
- RoHS-compliant
- Bass/Treble control
- EN55020 compliant

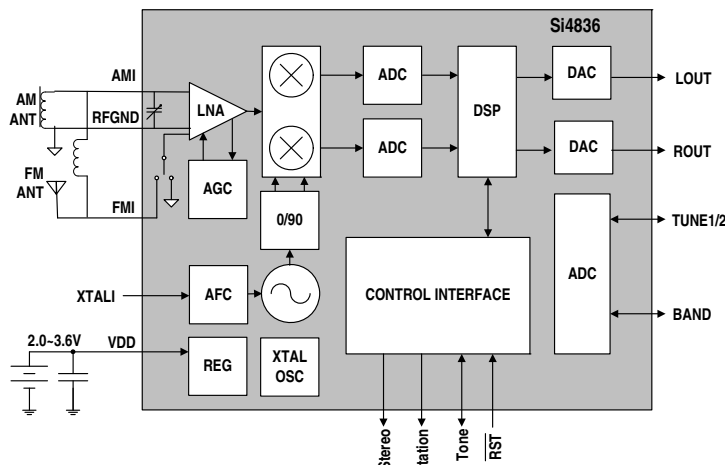

### Applications

- Table and portable radios
- Mini/micro systems
- CD/DVD players
- Boom boxes
- Modules
- Clock radios
- Mini HiFi
- Entertainment systems

### Description

The Si4836 is the high performance receiver function from antenna input to audio output. The Si4836 extends Silicon Laboratories multi-band tuner family, and further increases the ease and attractiveness of design radio reception to audio devices through small size and board area, minimum component count, and superior, proven performance. Si4836 enhances the FM and SW band coverage, further supports China TV channels audio reception in FM band. The Si4836 removes any requirements for manually tuning components during the manufacturing process. The receiver has very low power consumption, runs off two AAA batteries, and delivers the performance benefits of digital tuning to the analog radio market.

## 1. Electrical Specifications

Table 1. Recommended Operating Conditions<sup>1,2</sup>

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Supply Voltage <sup>3</sup>	$V_{DD}$		2	—	3.6	V
Power Supply Powerup Rise Time	$V_{DDRISE}$		10	—	—	$\mu$ s
Ambient Temperature Range	$T_A$		-15	25	85	$^{\circ}$ C

**Note:**

1. Typical values in the data sheet apply at  $V_{DD} = 3.3$  V and  $25^{\circ}$ C unless otherwise stated.
2. All minimum and maximum specifications in the data sheet apply across the recommended operating conditions for minimum  $V_{DD} = 2.7$  V.
3. Operation at minimum  $V_{DD}$  is guaranteed by characterization when  $V_{DD}$  voltage is ramped down to 2.0 V. Part initialization may become unresponsive below 2.3 V.

Table 2. DC Characteristics

( $V_{DD} = 2.7$  to  $3.6$  V,  $T_A = -15$  to  $85^{\circ}$ C)

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
<b>FM Mode</b>						
Supply Current*	$I_{FM}$		—	20.0	—	mA
<b>AM/SW Mode</b>						
Supply Current*	$I_{AM}$		—	19.0	—	mA
<b>Supplies and Interface</b>						
$V_{DD}$ Powerdown Current	$I_{DDPD}$		—	10	—	$\mu$ A

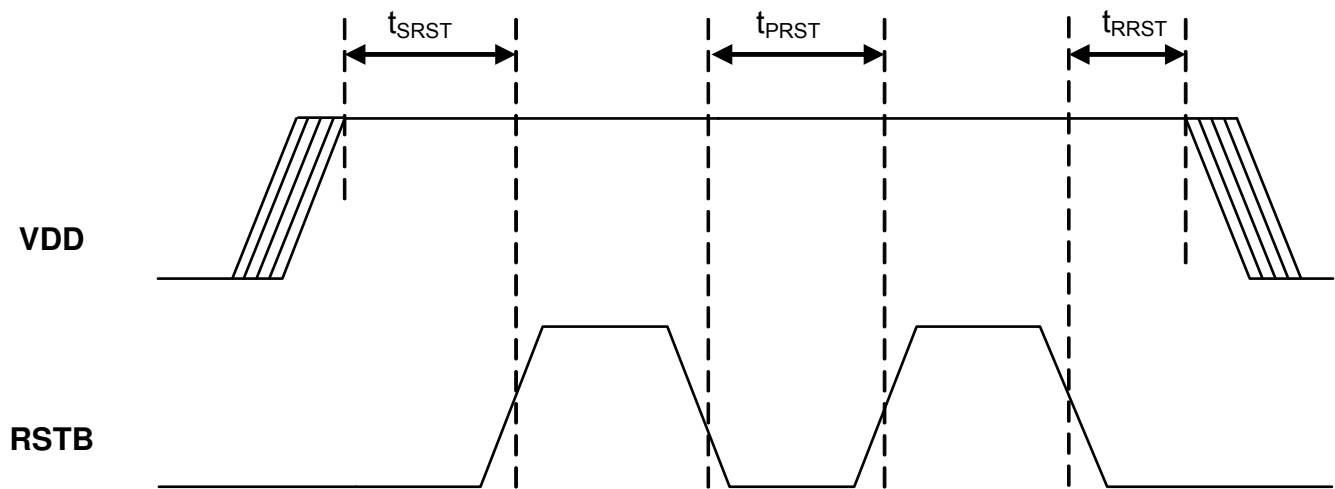

\*Note: Specifications are guaranteed by characterization.

**Table 3. Reset Timing Characteristics**(V<sub>DD</sub> = 2.7 to 3.6 V, TA = -15 to 85 °C)

Parameter	Symbol	Min	Typ	Max	Unit
RSTB Pulse Width	t <sub>PRST</sub>	100	—	—	μs
VDD Valid Time Before RSTB Rises	t <sub>SRST</sub>	100	—	—	μs
RSTB Low Time Before VDD Becomes Invalid	t <sub>RRST</sub>	0	—	—	μs

**Notes:**

1. RSTB must be held low for at least 100 μs after the voltage supply has been ramped up.
2. RSTB needs to be asserted (pulled low) prior to the supply voltage being ramped down.

**Figure 1. Reset Timing**

Audio Output Load Capacitance <sup>4,10</sup>	C <sub>L</sub>	Single-ended	—	—	50	pF

**Notes:**

1. Additional testing information is available in “AN569: Si4831/35/36/20/24/25-DEMO Board Test Procedure.” Volume = maximum for all tests. Tested at RF = 98.1 MHz.
2. To ensure proper operation and receiver performance, follow the guidelines in “AN738: Si4825/36-A Antenna, Schematic, Layout, and Design Guidelines.” Silicon Laboratories will evaluate schematics and layouts for qualified customers.
3. Frequency is 64~109 MHz.
4. Guaranteed by characterization.
5. V<sub>EMF</sub> = 1 mV.
6. F<sub>MOD</sub> = 1 kHz, MONO, and L = R unless noted otherwise.
7. Δf = 22.5 kHz.
8. |f<sub>2</sub> - f<sub>1</sub>| > 2 MHz, f<sub>0</sub> = 2 x f<sub>1</sub> - f<sub>2</sub>.
9. B<sub>AF</sub> = 300 Hz to 15 kHz, A-weighted.
10. At A<sub>OUT</sub> pin.
11. Δf = 75 kHz.
12. The test is done with Bass/Treble feature not enabled.

**Table 5. AM/SW Receiver Characteristics<sup>1, 2</sup>**(V<sub>DD</sub> = 2.7 to 3.6 V, T<sub>A</sub> = -15 to 85 °C)

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Input Frequency	f <sub>RF</sub>	Medium Wave (AM)	504	—	1750	kHz
		Short Wave (SW)	2.3	—	28.5	MHz
Sensitivity <sup>3,4,5</sup>		(S+N)/N = 26 dB	—	30	—	μV EMF
Large Signal Voltage Handling <sup>5</sup>		THD < 8%	—	300	—	mV <sub>RMS</sub>
Power Supply Rejection Ratio <sup>5</sup>		ΔV <sub>DD</sub> = 100 mV <sub>RMS</sub> , 100 Hz	—	40	—	dB
Audio Output Voltage <sup>3,6,8</sup>			—	60	—	mV <sub>RMS</sub>
Audio S/N <sup>3,4,6</sup>			—	55	—	dB
Audio THD <sup>3,6</sup>			—	0.1	0.5	%
Antenna Inductance <sup>5,7</sup>			180	—	450	μH

**Notes:**

1. Additional testing information is available in “AN569: Si4831/35/36/20/24/25-DEMO Board Test Procedure.” Volume = maximum for all tests. Tested at RF = 520 kHz and RF = 6 MHz.
2. To ensure proper operation and receiver performance, follow the guidelines in “AN738: Si4825/36-A Antenna, Schematic, Layout, and Design Guidelines.” Silicon Laboratories will evaluate schematics and layouts for qualified customers.
3. F<sub>MOD</sub> = 1 kHz, 30% modulation, 2 kHz channel filter.
4. B<sub>AF</sub> = 300 Hz to 15 kHz, A-weighted.
5. Guaranteed by characterization.
6. V<sub>IN</sub> = 5 mV<sub>rms</sub>.
7. Stray capacitance on antenna and board must be < 10 pF to achieve full tuning range at higher inductance levels.
8. The test is done with Bass/Treble feature not enabled.

**Table 6. Reference Clock and Crystal Characteristics**(V<sub>DD</sub> = 2.7 to 3.6 V, T<sub>A</sub> = -15 to 85 °C)

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
<b>Reference Clock</b>						
XTALI Supported Reference Clock Frequencies			—	32.768	—	kHz
Reference Clock Frequency Tolerance for XTALI			-100	—	100	ppm
<b>Crystal Oscillator</b>						
Crystal Oscillator Frequency			—	32.768	—	kHz
Crystal Frequency Tolerance			-100	—	100	ppm
Board Capacitance			—	—	3.5	pF

# Si4836-A10

**Table 7. Thermal Conditions**

Parameter	Symbol	Min	Typ	Max	Unit
Thermal Resistance*	$\theta_{JA}$	—	80	—	°C/W
Ambient Temperature	$T_A$	-15	25	85	°C
Junction Temperature	$T_J$	—	—	92	°C

**\*Note:** Thermal resistance assumes a multi-layer PCB with the exposed pad soldered to a topside PCB pad.

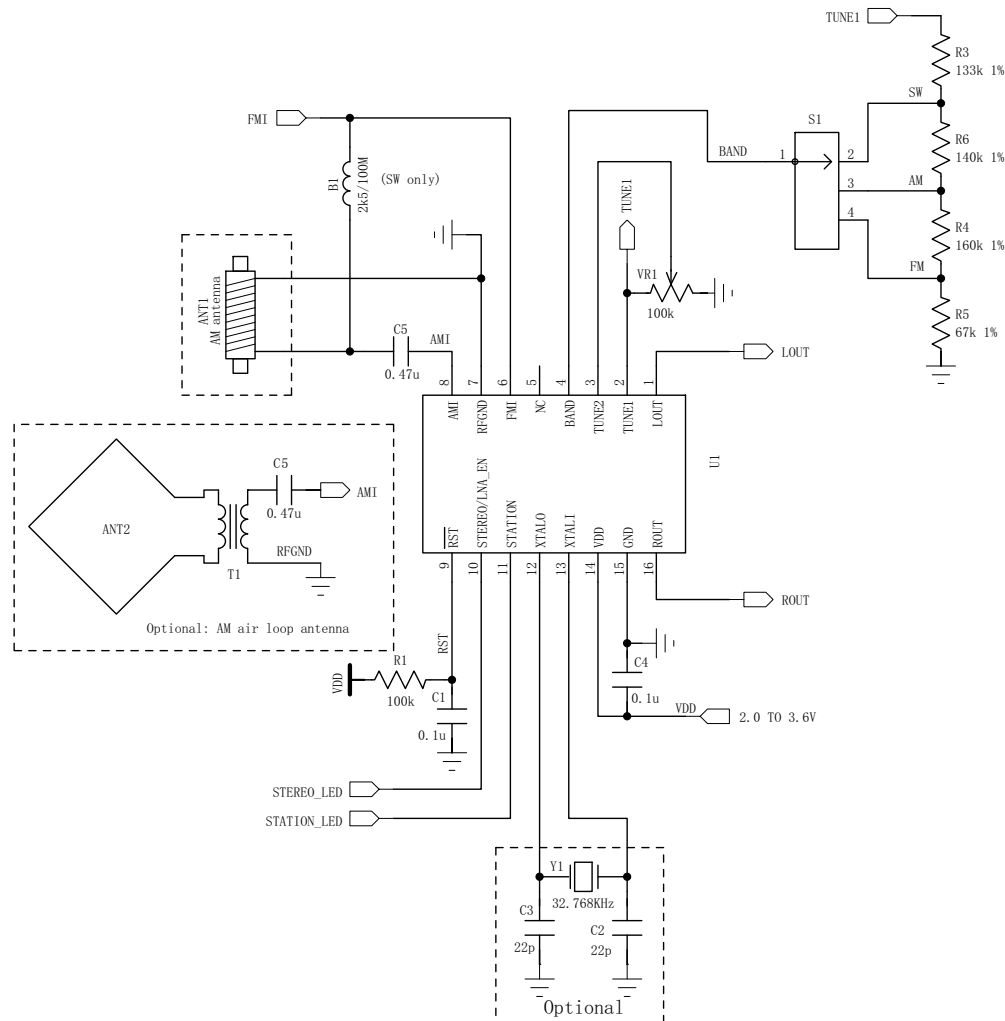

**Table 8. Absolute Maximum Ratings<sup>1,2</sup>**

Parameter	Symbol	Value	Unit
Supply Voltage	$V_{DD}$	-0.5 to 5.8	V
Input Current <sup>3</sup>	$I_{IN}$	10	mA
Operating Temperature	$T_{OP}$	-40 to 95	°C
Storage Temperature	$T_{STG}$	-55 to 150	°C
RF Input Level <sup>4</sup>		0.4	$V_{PK}$

**Notes:**

1. Permanent device damage may occur if the above Absolute Maximum Ratings are exceeded. Functional operation should be restricted to the conditions as specified in the operational sections of this data sheet. Exposure beyond recommended operating conditions for extended periods may affect device reliability.
2. The Si4836 devices are high-performance RF integrated circuits with certain pins having an ESD rating of < 2 kV HBM. Handling and assembly of these devices should only be done at ESD-protected workstations.
3. For input pins RST, STATION, STEREO/LNA\_EN, XTALO, XTALI, BAND, TUNE2, TUNE1.
4. At RF input pins, FMI and AMI.

## 2. Typical Application Schematic

### Notes:

1. Place  $C_4$  close to  $V_{DD}$  and GND pins.
2. Pin 15 GND connects directly to GND plane on PCB.
3. Pin 5 leave floating.
4. To ensure proper operation and receiver performance, follow the guidelines in "AN738: Si4825/36-A Antenna, Schematic, Layout, and Design Guidelines." Silicon Labs will evaluate the schematics and layouts for qualified customers.
5. Pin 6 connects to the FM antenna interface and pin 8 connects to the AM antenna interface.
6. Place Si4836 as close as possible to antenna jack and keep the FMI and AMI traces as short as possible.
7. Recommend keeping the AM ferrite loop antenna at least 5 cm away from the tuner chip.
8. Keep the AM ferrite loop antenna at least 5 cm away from MCU, audio AMP, and other circuits which have AM interference.
9. Place the transformer T1 away from any sources of interference and even away from the I/O signals of the Si4836.

# Si4836-A10

## 3. Bill of Materials

Table 9. Si4836-A Bill of Materials

Component(s)	Value/Description	Supplier
C1	Reset capacitor 0.1 $\mu$ F, $\pm$ 20%, Z5U/X7R	Murata
C4	Supply bypass capacitor, 0.1 $\mu$ F, $\pm$ 20%, Z5U/X7R	Murata
C5	Coupling capacitor, 0.47 $\mu$ F, $\pm$ 20%, Z5U/X7R	Venkel
B1	Ferrite bead 2.5 k/100 MHz	Murata
VR1	Variable resistor (POT), 100 k $\Omega$ , $\pm$ 10%	Kennon
R1	Reset timing resistor, 100 k $\Omega$ , $\pm$ 5%	Venkel
R3	Resistor, 133 k $\Omega$ , $\pm$ 1%	Venkel
R4	Resistor, 160 k $\Omega$ , $\pm$ 1%	Venkel
R5	Resistor, 67 k $\Omega$ , $\pm$ 1%	Venkel
R6	Resistor, 140 k $\Omega$ , $\pm$ 1%	Venkel
U1	Si4836-A AM/FM/SW Analog Tune Analog Display Radio Tuner	Silicon Laboratories
S1	Band switch	Any, depends on customer
ANT1	Ferrite stick, 180–450 $\mu$ H	Jiaxin
<b>Optional Components</b>		
C2, C3	Crystal load capacitors, 22 pF, $\pm$ 5%, COG (Optional: for crystal oscillator option)	Venkel
Y1	32.768 kHz crystal (Optional: for crystal oscillator option)	Epson or equivalent
ANT2	Air loop antenna, 10–20 $\mu$ H	Various

## 4. Functional Description

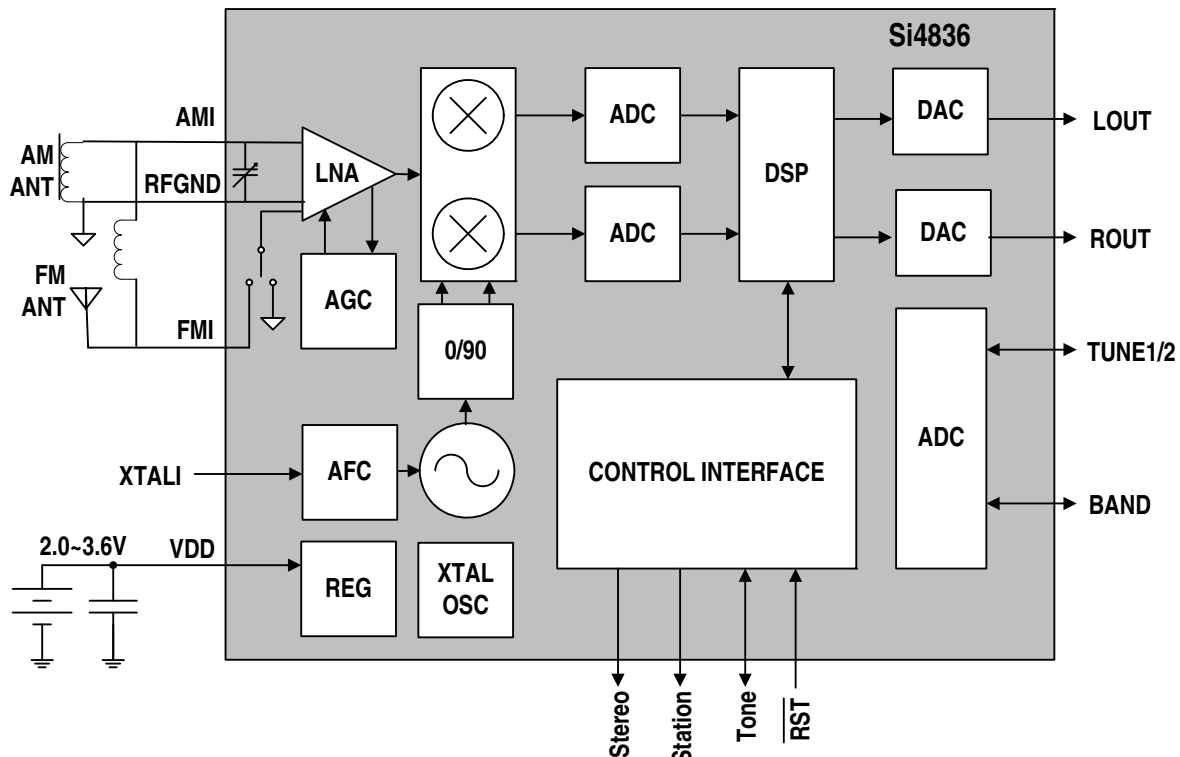

Figure 2. Si4836 Functional Block Diagram

### 4.1. Overview

The Si4836 is the high performance mechanical-tuned digital CMOS AM/FM/SW radio receiver IC that integrates the complete receiver function from antenna input to audio output. The Si4836 extends Silicon Laboratories multi-band tuner family, and further increases the ease and attractiveness of design radio reception to audio devices through small size and board area, minimum component count, and superior, proven performance. The Si4836 enhances the FM and SW band coverage and further supports China TV channels audio reception in FM band. The Si4836 removes any requirements for manually tuning components during the manufacturing process.

Leveraging Silicon Laboratories' proven and patented digital low intermediate frequency (low-IF) receiver architecture, the Si4836 delivers desired RF performance and interference rejection in AM, FM, and SW bands. The high integration and complete system production test simplifies design-in, increases system quality, and improves manufacturability.

### 4.2. FM Receiver

The Si4836 integrates a low noise amplifier (LNA) supporting the worldwide FM broadcast band (64 to 109 MHz) and the TV audio stations within the frequency range in China area are also supported.

Pre-emphasis and de-emphasis is a technique used by FM broadcasters to improve the signal-to-noise ratio of FM receivers by reducing the effects of high frequency interference and noise. When the FM signal is transmitted, a pre-emphasis filter is applied to accentuate the high audio frequencies. All FM receivers incorporate a de-emphasis filter which attenuates high frequencies to restore a flat frequency response. Two time constants are used in various regions. The de-emphasis time constant can be chosen to be 50 or 75  $\mu$ s. Refer to "AN738: Si4825/36-A Antenna, Schematic, Layout, and Design Guidelines."

The Si4836 also has advanced stereo blending that employs adaptive noise suppression. As a signal quality degrades, the Si4836 gradually combines the stereo left and right audio channels to a mono audio signal to maintain optimum sound fidelity under varying reception conditions. The Si4836 can drive a stereo light with the stereo/mono information so that the user can easily

discern the signal quality.

The stereo light up criteria are defined using both RSSI and the Left and Right separation levels as these two specifications are the primary factors for stereo listening. The criteria can be set between two conditions: the Left and Right channels are separated by more than 6 dB with RSSI at >20 dB or they are separated by more than 12 dB with RSSI at >28 dB. The selection can be set up using different values of the external resistor. Refer to "AN738: Si4825/36-A Antenna, Schematic, Layout, and Design Guidelines."

### 4.3. AM Receiver

The highly integrated Si4836-A10 supports worldwide AM band reception from 504 to 1750 kHz with five sub-bands using a digital low-IF architecture with a minimum number of external components and no manual alignment required. This patented architecture allows for high-precision filtering, offering excellent selectivity and SNR with minimum variation across the AM band. The Si4836 supports the worldwide AM band with five sub-bands. One of the bands is a universal AM band (AM4, 520–1730 kHz) supporting both 9 kHz and 10 kHz channel spaces for all regional AM standards of the world. Similar to the FM receiver, the Si4836 optimizes sensitivity and rejection of strong interferers, allowing better reception of weak stations.

To offer maximum flexibility, the receiver supports a wide range of ferrite loop sticks from 180–450  $\mu$ H. An air loop antenna is supported by using a transformer to increase the effective inductance from the air loop. Using a 1:5 turn ratio inductor, the inductance is increased by 25 times and easily supports all typical AM air loop antennas, which generally vary between 10 and 20  $\mu$ H.

### 4.4. SW Receiver

The Si4836 supports 36 short wave (SW) band receptions from 2.3 to 28.5 MHz, 18 of which are meter wave band (Narrow), and the rest of the SW bands are with wider frequency range that can be used in SW radio with 1 or 2 SW bands. Si4836 supports extensive short wave features such as minimal discrete components and no factory adjustments. The Si4836 supports using the FM antenna to capture short wave signals.

### 4.5. Frequency Tuning

A valid channel can be found by tuning the potentiometer that is connected to the TUNE1 and TUNE2 pin of the Si4836 chip.

To offer easy tuning, the Si4836 also supports a station LED light. It will light up the LED if the RF signal quality passes the LED sensitivity threshold when tuned to a valid station.

### 4.6. Band Select

The Si4836 supports worldwide AM band with five sub-bands, US/Europe/Japan/China FM band with five sub-bands, and SW band with 36 sub-bands. For details on band selection, refer to "AN738: Si4825/36-A Antenna, Schematic, Layout, and Design Guidelines."

### 4.7. Bass and Treble

The Si4836 further supports bass and treble tone control for superior sound quality. Pins 12 can be configured for tone control with single push button if the system can provide 32.768 kHz external clock to Pin13, allowing customers to adjust the bass and treble in a cyclic way. For further configuration details, refer to "AN738: Si4825/36-A Antenna, Schematic, Layout, and Design Guidelines."

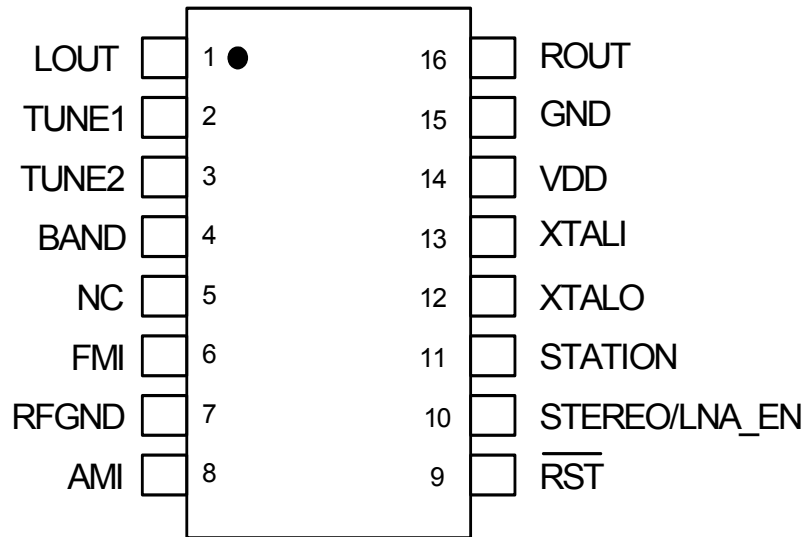

### 4.8. Reset, Powerup, and Powerdown

Setting the RSTB pin low will disable analog and digital circuitry, reset the registers to their default settings, and disable the bus. Setting the RSTB pin high will bring the device out of reset.

Figure 1 shows typical reset, startup, and shutdown timings for the Si4836. RSTB must be held low (asserted) during any power supply transitions and kept asserted as specified in Figure 1 after the power supplies are ramped up and stable. Failure to assert RSTB as indicated here may cause the device to malfunction and may result in permanent device damage.

A powerdown mode is available to reduce power consumption when the part is idle. Putting the device in powerdown mode will disable analog and digital circuitry while keeping the bus active.

## 5. Pin Descriptions: Si4836-A10

Pin Number(s)	Name	Description
1	LOUT	Left audio output
2	TUNE1	Frequency tuning
3	TUNE2	Frequency tuning
4	BAND	Band selection and de-emphasis selection
5	NC	No connect. Leave floating.
6	FMI	FM RF inputs. FMI should be connected to the antenna trace.
7	RFGND	RF ground. Connect to ground plane on PCB.
8	AMI	AM RF input. AMI should be connected to the AM antenna.
9	RST	Device reset (active low) input
10	STEREO/LNA_EN	Stereo indicator, enable the SW external LNA in SW mode.
11	STATION	Station indicator
12	XTALO	Crystal oscillator output
13	XTALI	Crystal oscillator input/external reference clock input
14	VDD	Supply voltage. May be connected directly to battery.
15	GND	Ground. Connect to ground plane on PCB.
16	ROUT	Right audio output

## DOCUMENT CHANGE LIST

### Revision 0.1 to Revision 0.8

- Added ambient temperature range to "Table 1. Recommended Operating Conditions"
- Updated "Functional Block Diagram"
- Updated Table 2, "DC Characteristics"
- Updated Table 4, "FM Receiver Characteristics"
- Updated Table 5, "AM/SW Receiver Characteristics"
- Updated Section "2. Typical Application Schematic"
- Updated Section "4.3. AM Receiver"
- Updated Section "4.7. Bass and Treble"
- Updated Section "5. Pin Descriptions: Si4836-A10"
- Updated Section "6. Ordering Guide"
- Updated Section "10. Additional Reference Resources"

### Revision 0.8 to Revision 1.0

- Updated Table 3. "Reset Timing Characteristics"
- Inserted Section 4.8. "Reset, Powerup, and Powerdown"

Smart.  
Connected.  
Energy-Friendly
