

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Si50122-Ax-EVB USER'S GUIDE

Description

Si50122-Ax is a high performance, crystal-less PCIe clock generator with internal CMEMS that can generate two 100 MHz HCSL and one 25 MHz LVCMOS clock outputs.

This document is intended to be used in conjunction with the Si50122-Ax-EVB, Si50122 device, and data sheet for the following tests:

- PCIe Gen 1, Gen 2, Gen 3 compliancy
- Power consumption test
- Jitter performance

The Si50122-Ax-EVB is used to evaluate the Si50122-Ax. Table 1 shows the device part number and corresponding evaluation board part number.

Table 1. Evaluation Board Orderable Part Number

Device Part Number	PCIe Compliant	Spread Spectrum	EVB Orderable Part Number
Si50122-A1-GM	Gen 1	No	Si50122-A3-EVB
Si50122-A2-GM	Gen 1	Yes	Si50122-A4-EVB
Si50122-A3-GM	Gen 1/2	No	Si50122-A3-EVB
Si50122-A4-GM	Gen 1/2	Yes	Si50122-A4-EVB
Si50122-A5-GM	Gen 1/2/3	No	Si50122-A5-EVB
Si50122-A6-GM	Gen 1/2/3	Yes	Si50122-A6-EVB

Si50122-Ax-EVB

Figure 1. Evaluation Module Front Panel

To use Si50122-Ax-EVB:

1. Check to confirm that the device part number to be evaluated corresponds to the evaluation board – refer to Table 1.
2. Power up the EVB using the VCC and GND pins.
3. View and measure the outputs via the SMA connectors.

Disclaimer

Silicon Laboratories intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Laboratories products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Laboratories reserves the right to make changes without further notice and limitation to product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Silicon Laboratories shall have no liability for the consequences of use of the information supplied herein. This document does not imply or express copyright licenses granted hereunder to design or fabricate any integrated circuits. The products must not be used within any Life Support System without the specific written consent of Silicon Laboratories. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Laboratories products are generally not intended for military applications. Silicon Laboratories products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons.
