

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DATA SHEET

SKY13330-397LF: 0.1-6.0 GHz SP2T Switch

Applications

- WCDMA band and mode switching
- Antenna switch for multimode systems

Features

- Broadband frequency range: 0.1 GHz to 6.0 GHz
- Low insertion loss:
 - 0.35 dB @ 2.2 GHz
 - 0.60 dB @ 6 GHz
- High IP1dB: +39 dBm
- No external DC blocking capacitors required
- Positive low control voltage range: 1.65 V to 2.70 V
- DC supply voltage: 2.3 V to 4.8 V
- Small, QFN (12-pin, 2 x 2 mm) package (MSL1, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

The SKY13330-397LF is a CMOS, Silicon-On-Insulator (SOI) Single-Pole, Double-Throw (SP2T) switch. The high linearity and low insertion loss of the SKY13330-397LF make it an ideal choice for WCDMA handset and data card applications.

The switch is a “reflective short” on the isolated port.

The SKY13330-397LF SP2T switch is provided in a compact Quad Flat No-Lead (QFN) 2 x 2 mm package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Note: Exposed pad must be properly grounded using a low impedance path.

Table 2. SKY13330-397LF Absolute Maximum Ratings (Note 1)

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	B _{ATT}		5.0	V
Input power	P _{IN}		+40	dBm
Storage temperature	T _{STG}	-40	+125	°C
Operating temperature	T _{OP}	-40	+85	°C

Note 1: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Functional Description

The SKY13330-397LF is designed for medium to high power WCDMA handset and data card switching applications. The device can also be used in a variety of other applications that require high performance RF switching such as WLANs (a/b/g/n).

An internal negative voltage generator and decoder eliminate the need for external DC blocking capacitors on the RF ports unless VDC is externally applied.

Switching is controlled by one voltage input (CTRL). Depending on the logic voltage level applied to the control pin, the RF1 pin is connected to one of two switched RF outputs (RF2 or RF3) using a low insertion loss path, while the path between the RF1 pin and the other RF output pin is in a high isolation state.

An internal decoder is used to provide the correct logic to the switch.

Shutdown mode is enabled by connecting the ENABLE pin to logic low. Shutdown mode reduces the overall current consumption of the device to 7 μ A, typical.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13330-397LF are provided in Table 2. Electrical specifications are provided in Table 3.

The state of the SKY13330-397LF is determined by the logic provided in Table 4.

Typical performance characteristics of the SKY13330-397LF are illustrated in Figures 3 through 5.

Shutdown mode supply current	I_{OFF}	$ENABLE = 0\text{ V}$, $V_{BATT} = 2.3\text{ V to }4.8\text{ V}$		7		μA

Note 1: Performance is guaranteed only under the conditions listed in this Table.**Note 2:** Startup time refers to the amount of time it takes for the switch to be fully operational when coming out of shutdown mode ($EN = 0$).

Table 4. SKY13330-397LF Truth Table

CTRL	ENABLE	Mode
1	1	RF1 to RF2
0	1	RF1 to RF3
X	0	Shutdown

Note: 1 = 1.65 to 2.70 V
 0 = -0 to 0.4 V (control voltage must be $\leq V_{DD}$ at all times)
 X = don't care
 Any state other than described in this Table places the switch into an undefined state. An undefined state will not damage the device.

Evaluation Board Description

The SKY13330-397LF Evaluation Board is used to test the performance of the SKY13330-397LF SP2T Switch.

An Evaluation Board schematic diagram is provided in Figure 6. An assembly drawing for the Evaluation Board is shown in Figure 7.

Package Dimensions

The PCB layout footprint for the SKY13330-397LF is provided in Figure 8. Typical case markings are shown in Figure 9. Package dimensions for the 12-pin QFN are shown in Figure 10, and tape and reel dimensions are provided in Figure 11.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

THE SKY13330-397LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

All measurements are in millimeters.
 Dimensioning and tolerancing according to ASME Y14.5M-1994.
 Coplanarity applies to the terminals and all other bottom surface metalization.
 Dimension applies to metalized terminal. If the terminal has a radius on its end,
 the width dimension should not be measured in that radius area.
