

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DATA SHEET

# SKY13431-374LF: 0.5 to 6.0 GHz SPDT Switch, 50 Ω Terminated

## Applications

- Dual-band WLANs (802.11 a/b/g/n)
- WLAN 802.11a/c for video distribution
- LTE/4G systems
- WiMAX 802.16

## Features

- 50 Ω matched RF ports in all states
- Low insertion loss: 0.5 dB @ 2.5 GHz
- High isolation: 25 dB @ 2.5 GHz
- IP1dB: +36 dBm
- Small DFN (6-pin, 1.5 x 1.5 mm) package (MSL1, 260 °C per JEDEC J-STD-020)

## Description

The SKY13431-374LF is a GaAs pHEMT single-pole, double-throw (SPDT) high-power switch with 50 Ω terminated outputs. The high-linearity performance and low insertion loss achieved by the SKY13431-374LF make it an ideal choice for WiMAX and higher power WLAN applications such as access points.

This part is designed for use in WLAN systems using discrete power amplifier (PA) and low-noise amplifier (LNA) implementations. The 50 Ω impedance of the switch in the “off” state ensures good isolation regardless of the match to which the switch is connected.

The SKY13431-374LF is manufactured in a compact, 1.5 x 1.5 mm, 6-pin Dual Flat No-Lead (DFN) package.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Table 1. SKY13431-374LF Signal Descriptions**

Pin	Name	Description	Pin	Name	Description
1	V1	DC control voltage. A logic high voltage enables an insertion loss path between the RFC and RF1 pins.	4	RF2	RF output: 50 $\Omega$ terminated when in isolation state. Must be DC blocked.
2	RFC	RF common input. Must be DC blocked.	5	GND	Ground
3	V2	DC control voltage. A logic high voltage enables an insertion loss path between the RFC and RF2 pins.	6	RF1	RF output: 50 $\Omega$ terminated when in isolation state. Must be DC blocked.

### Functional Description

Switching is controlled by two control voltage inputs, V1 and V2 (pins 1 and 3, respectively). Depending on the logic voltage level applied to the control pins, the RFC pin is connected to one of the two switched RF outputs, RF1 or RF2, using a low insertion loss path, while the path between the RFC pin and the other RF pin is in a high isolation state.

DC blocking capacitors are required on all RF ports of the switch. The value of the capacitors determines the low frequency operation. The isolated RF output is internally terminated to 50  $\Omega$ . The return loss of the isolated port is limited in frequency by on-chip capacitors.

### Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13431-374LF are provided in Table 2. Electrical specifications are provided in Table 3.

Typical performance characteristics of the SKY13431-374LF are illustrated in Figures 3 through 6.

The state of the SKY13431-374LF is determined by the logic provided in Table 4.

**Table 2. SKY13431-374LF Absolute Maximum Ratings<sup>1</sup>**

Parameter	Symbol	Minimum	Maximum	Units
Control voltage	V <sub>CTL</sub>		6	V
Input power	P <sub>IN</sub>		+37	dBm
Storage temperature	T <sub>STG</sub>	-40	+125	°C
Operating temperature	T <sub>OP</sub>	-40	+85	°C

<sup>1</sup> Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**ESD HANDLING:** *Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.*

### Evaluation Board Description

The SKY13431-374LF Evaluation Board is used to test the performance of the SKY13431-374LF SPDT Switch. An Evaluation Board schematic diagram is provided in Figure 7. An assembly drawing for the Evaluation Board is shown in Figure 8.

### Package Dimensions

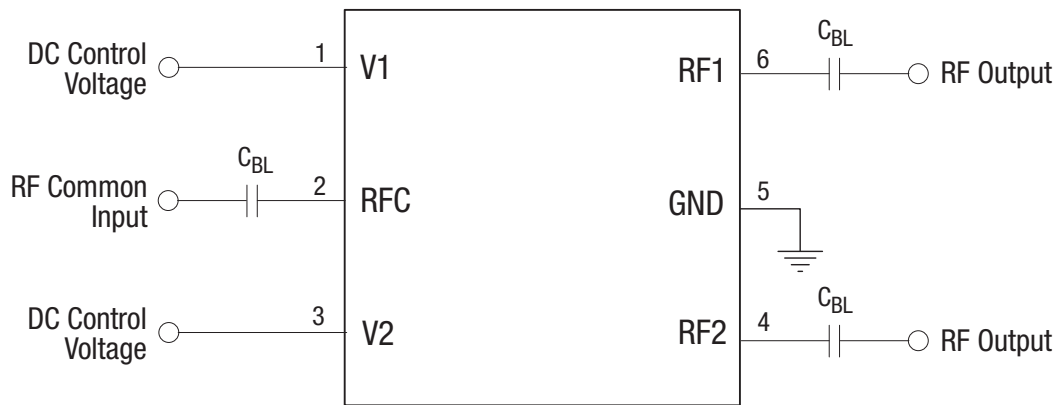

The PCB layout footprint for the SKY13431-374LF is provided in Figure 9. Typical case markings are shown in Figure 10. Package dimensions are shown in Figure 11, and tape and reel dimensions are provided in Figure 12.

### Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY13431-374LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

$C_{BL} = 47 \text{ pF}$  for  $>1 \text{ GHz}$  operation. Increase value for lower frequency operation.

Exposed ground paddle should be grounded for best performance.
