## Description

The SKY13449-001 is a single-pole, triple-throw (SP3T) designed for antenna tuning applications that require very low R<sub>ON</sub> and CoFF. The SKY13449-001 can also be used for LTE/WCDMA/GSM transmit applications. Switching is controlled by an integrated GPIO interface with two control pins. Depending on the logic voltage level applied to the control pins, the antenna port is connected to one of the switched RF outputs (RF1, RF2, or RF3) through a low-insertion loss path, while the path between the antenna port and the other RF ports is in a high-isolation state.

No external DC blocking capacitors are required as long as no DC voltage is applied on any RF path.

The SKY13449-001 is provided in a compact 9-bump, 1.272 x 1.272 x 0.504 mm Wafer Level Chip Scale Package (WLCSP) that meets requirements for board-level assembly. Bump diameters are 262 microns with a minimum bump pitch of 400 microns.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Electrical and Mechanical Specifications**

The absolute maximum ratings of the SKY13449-001 are provided in Table 2. Electrical specifications are provided in Table 3.

The state of the SKY13449-001 is determined by the logic provided in Table 4.

**Table 2. SKY13449-001 Absolute Maximum Ratings (Note 1)**

**Note 1:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.
