

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DATA SHEET

# SKY66001-11: 2100 to 2200 MHz, +19 dBm Linear Power Amplifier

## Applications

- Residential femtocells
- WCDMA, Band I
- Small cells

## Features

- Small signal gain: 28.6 dB
- ACLR at P<sub>OUT</sub> = +19 dBm: -51 dBc
- PA on/off control
- I/O impedance internally matched to 50 Ω
- Single DC supply: 3.3 V to 4.6 V
- Minimal number of external components required
- Small footprint MCM (10-pin, 3 x 3 mm) package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

## Description

The SKY66001-11 linear Power Amplifier (PA) is a fully matched surface mount module developed for WCDMA applications operating from 2100 to 2200 MHz. The device meets the stringent spectral linearity requirements of WCDMA femtocell applications with high power-added efficiency. An integrated directional coupler eliminates the need for any external coupler.

The GaAs MMIC contains all active amplifier circuitry, which includes input and interstage matching circuits. An output match into a 50 Ω load, realized off-chip within the module package, optimizes efficiency and power performance.

The SKY66001-11 is manufactured with Skyworks InGaP GaAs HBT process, which provides for all positive voltage DC supply operation and maintains high efficiency and good linearity. The primary bias to the device can be supplied directly from any suitable power supply with an output of 4.2 V. Power down is achieved by setting the VEN pin to 0 V. No external supply side switch is needed since typical “off” leakage is a few microamps with full primary voltage supplied from the main power supply.

The SKY66001-11 is packaged in a 10-pin, 3 x 3 mm Multi-Chip Module (MCM), which allows for a highly manufacturable low-cost solution.

The 10-pin MCM package and pinout are shown in Figure 1. A functional block diagram of the SKY66001-11 is shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Table 1. SKY66001-11 Signal Descriptions

Pin #	Name	Description	Pin #	Name	Description
1	VCC1	Input stage supply voltage	6	CPL_OUT	RF coupler output
2	RF_IN	RF input port	7	GND	Ground
3	GND	Ground	8	CPL_IN	RF coupler input
4	GND	Ground	9	RF_OUT	RF output port
5	VEN	Enable	10	VCC2	Output stage supply voltage

### Technical Description

The SKY66001-11 PA contains all of the needed RF matching and DC biasing circuits. The device is a two-stage, HBT InGaP device optimized for high linearity and power efficiency. These features make the device suitable for wideband digital applications where PA linearity and power consumption are of critical importance (e.g., small cell and infrastructure applications).

The device is designed for standard WCDMA modulated signals. Under these stringent test conditions, the device exhibits excellent spectral purity and power efficiency.

### Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY66001-11 are provided in Table 2. The recommended operating conditions are specified in Table 3 and electrical specifications are provided in Table 4.

Typical performance characteristics of the SKY66001-11 are illustrated in Figures 3 to 11.

**Table 2. SKY66001-11 Absolute Maximum Ratings (Note 1)**

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage (VCC1, VCC2)	VCC	0	+4.6	V
Total supply current	ICC		700	mA
Logic control input voltage (VEN)	VCTL	-0.5	3.1	V
Case operating temperature (Note 2)	Tc	-40	+85	°C
Storage temperature	TSTG	-55	+150	°C
Junction temperature	TJ		+150	°C
Thermal resistance	$\Theta_{JC}$		60	°C/W
Electrostatic Discharge:	ESD			
Charged Device Model (CDM), Class 4			500	V
Human Body Model (HBM), Class 1C			1000	V
Machine Model (MM), Class A			150	V

**Note 1:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**Note 2:** Case operating temperature (Tc) refers to the temperature of the bottom ground pad.

---

**CAUTION:** Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

---

**Table 3. SKY66001-11 Recommended Operating Conditions**

Parameter	Symbol	Minimum	Typical	Maximum	Units
Frequency range	f	2100		2200	MHz
Supply voltage (VCC1, VCC2) (Note 1)	VCC	4.0	4.2	4.6	V
Logic control input voltage:					
Logic high	V <sub>IH</sub>	1.35	1.80	3.10	V
Logic low	V <sub>IL</sub>	0		0.5	V
PA enable current	I <sub>EN</sub>			<1	mA
Case operating temperature	Tc	-20	+25	+85	°C

**Note 1:** Voltage levels measured at the pads of the package. The Evaluation Board supply voltage levels may be different. Refer to the Evaluation Board schematic diagram in this Data Sheet.

**Table 4. SKY66001-11 Electrical Specifications (Note 1)**

(VCC1 = VCC2 = +4.2 V, Tc = +25 °C, f = 2140 MHz, Characteristic Impedance [Zo] = 50 Ω, VEN = “1,” Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Small signal gain	IS211	CW, PIN = -20 dBm	27.0	28.6		dB
Input return loss	IS111	CW, PIN = -20 dBm	14	17		dB
Quiescent current	ICQ	No RF		57	64	mA
Operating current	ICC	CW, POUT = +19 dBm		120	134	mA
Power-down current	IPD	VEN = “0”		0.1	10.0	μA
Adjacent Channel Leakage Ratio	ACLR5	@5 MHz offset, WCDMA test model 1, with 64 DPCH, POUT = +19 dBm		-51	-47	dBc
Error Vector Magnitude	EVM	POUT = +19 dBm		1.3	2.0	%
Harmonic suppression	2fo 3fo	CW, POUT = +19 dBm		-52 -52	-47 -46	dBc dBc
3 <sup>rd</sup> Order Output Intercept Point	OIP3	+19 dBm/tone, frequency separation = 5 MHz	+37	+40		dBm
Input coupling factor	CPLIN			-29		dB
Output coupling factor	CPLOUT			-18		dB
Stability (non-harmonic spurious)	VSWRSTABILITY	VSWR = 6:1		-70		dBc
Maximum ruggedness input power	PIN_RUG	VSWR = 6:1		-7		dBm

**Note 1:** Performance is guaranteed only under the conditions listed in this Table. Both pins 6 and 8 (CPL\_OUT and CPL\_IN, respectively) should be terminated with 50 Ω.

### Evaluation Board Description

The SKY66001-11 Evaluation Board is used to test the performance of the SKY66001-11 PA. A typical application schematic diagram is shown in Figure 12. An assembly drawing for the Evaluation Board is shown in Figure 13 and the layer detail is provided in Figure 14.

### Package Dimensions

The PCB layout footprint for the SKY66001-11 is provided in Figure 15. Typical case markings are shown in Figure 16. Figure 17 shows the package dimensions for the 10-pin MCM, and Figure 18 provides the tape and reel dimensions.

### Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the

shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY66001-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
