

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**DATA SHEET**

# SKY67130-396LF: 0.7-2.7 GHz High Linearity Amplifier Driver

## Applications

- LTE, CDMA, WCDMA, and TD-SCDMA cellular infrastructures
- Linear amplifier systems that require high OIP3 with extremely low current
- Ideal for 2.7 to 5.0 V WLAN driver PAs and cellular repeater systems

## Features

- Ultra efficient linear performance
- High OIP3 performance at 2600 MHz: +39 dBm with 3.3 V and 22 mA
- Low Noise Figure: 2.6 dB @ 2.6 GHz and 22 mA
- Adjustable supply current
- Power-down capability
- Unconditionally stable to 24 GHz
- Temperature and process-stable active bias
- Miniature DFN (8-pin, 2 x 2 mm) package (MSL1 @ 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

**Figure 1. SKY67130-396LF Block Diagram**

## Description

The SKY67130-396LF is an InGaP HBT linear amplifier driver with an active bias and superior low-current performance. The advanced InGaP HBT process provides excellent return loss, low noise, and high linearity. The internal active bias circuitry provides stable performance over temperature and process variation.

The supply current can be adjusted, independent of the supply voltage, using the VBIAS signal (pin 8). The VBIAS pin should be connected to the control voltage through an external resistor to control the collector current. The RFIN and RFOUT/VCC pins should be DC blocked to ensure proper operation.

The SKY67130-396LF is manufactured in a compact, 2 x 2 mm, 8-pin Dual Flat No-Lead (DFN) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Figure 2. SKY67130-396LF Pinout – 8-Pin DFN (Top View)**

**Table 1. SKY67130-396LF Signal Descriptions**

Pin #	Name	Description	Pin #	Name	Description
1	NC or GND	No connection. May be connected to ground with no change in performance.	5	GND	Connect to ground through a low impedance path.
2	RFIN	RF input. DC blocking capacitor required.	6	NC or GND	No connection required. May be connected to ground with no change in performance.
3	NC or GND	No connection. May be connected to ground with no change in performance.	7	RFOUT/VCC	RF output. Apply VCC through RF choke inductor. No DC blocking capacitor required.
4	GND	Connect to ground through a low impedance path.	8	VBIAS	Sets LNA quiescent current

**Table 2. SKY67130-396LF Absolute Maximum Ratings (Note 1)**

Parameter	Symbol	Minimum	Typical	Maximum	Units
Supply voltage	V <sub>CC</sub>			5.5	V
Quiescent current	I <sub>CO</sub>			45	mA
Dissipated power (Note 2)	P <sub>DISS</sub>			150	mW
RF input power	P <sub>IN</sub>			+20	dBm
Storage temperature	T <sub>STG</sub>	-65	+25	+150	°C
Operating temperature	T <sub>A</sub>	-40	+25	+85	°C
Junction temperature	T <sub>J</sub>			+150	°C

**Note:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**Note 2:** Dissipated power is equal to supply voltage (V<sub>CC</sub>) multiplied by the quiescent current (I<sub>CO</sub>).

---

**CAUTION:** Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times. The SKY67130-396LF is a Human Body Model (HBM) Class 1A ESD device.

---

**Electrical and Mechanical Specifications**

The absolute maximum ratings of the SKY67130-396LF are provided in Table 2. Electrical specifications are provided in Tables 3 and 4.

Typical performance characteristics of the SKY67130-396LF are illustrated in Figures 3 through 27.

**Table 3. SKY67130-396LF Electrical Specifications: 3.3 V Operation (Note 1)****(V<sub>CC</sub> = 3.3 V, I<sub>CC</sub> = 22 mA, T<sub>A</sub> = +25 °C, P<sub>IN</sub> = -13 dBm, Characteristic Impedance [Z<sub>0</sub>] = 50 Ω, Unless Otherwise Noted)**

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
<b>RF Specifications</b>						
Noise Figure (Note 2)	NF	@ 2.6 GHz, quiescent current = 22 mA		2.6		dB
Small signal gain	IS21I	@ 2.6 GHz		13		dB

### Evaluation Board Description

The SKY67130-396LF Evaluation Board is used to test the performance of the SKY67130-396LF LNA. An assembly drawing for the Evaluation Board is shown in Figure 28. An Evaluation Board schematic diagram is provided in Figure 29. Table 5 provides the Bill of Materials (BOM) list for Evaluation Board 2.6 GHz matching components.

The test board uses a 10 mil Rogers 4350B substrate on a 50 mil FR4 supporting substrate. The Rogers 4350B material was selected for the RF circuit because of its low dielectric constant ( $\epsilon_r$ ) and low  $\epsilon_r$  variation over temperature for the best possible noise performance.

### Package Dimensions

The PCB layout footprint for the SKY67130-396LF is provided in Figure 30. Typical case markings are shown in Figure 31. Package dimensions for the 8-pin DFN are shown in Figure 32, and tape and reel dimensions are provided in Figure 33.

### Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

THE SKY67130-396LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Figure 31. Typical Case Markings (Top View)

All measurements are in millimeters.  
 Dimensioning and tolerancing according to ASME Y14.5M-1994.  
 Coplanarity applies to the exposed heat sink slug as well as the terminals.  
 Plating requirement per source control drawing (SCD) 2504.  
 Dimension applies to metallized terminal and is measured between 0.15 mm and 0.30 mm from terminal tip.
