imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

EFM8 Universal Bee Family QSG132: EFM8UB1-SLSTK2000A Quick Start Guide

The EFM8UB1-SLSTK2000A is an excellent starting point to get familiar with the EFM8 Universal Bee microcontrollers.

The kit contains sensors and peripherals demonstrating some of the MCU's many capabilities. The kit can also serve as a starting point for application development.

KIT CONTENTS

- EFM8UB1 Universal Bee Starter Kit Board
- 1 x mini USB cable
- 1 x micro USB cable
- 1 x CR2032 coin cell battery
- Getting Started card

1. Getting Started

Install Simplicity Studio

Simplicity Studio is a free software suite needed to start developing your application. Download the latest version of Simplicity Studio from the Silicon Labs website:

http://www.silabs.com/simplicity-studio

	This example demonstrates the RGR I FD	ADC peripheral driver library to sample	

Note: The board comes pre-loaded with a default application, Space Invaders, to play with while the software downloads.

- · Set Up Your Kit
 - 1. Provide power to the board by connecting the DBG USB connector to the PC using the provided USB cable.

Note: Some demos that use the device USB may require the second USB cable to be connected. See the demo description for more information.

- Detect Your Device
 - 1. Wait for the J-Link debug adapter to appear in the [**Devices**] area. The board may take some time to appear due to driver installations for the debug adapter.
 - 2. Click the J-Link debug adapter or the board information corresponding to the board. This will verify that the installation was successful, identify the MCU on the kit hardware, and automatically configure the software tools for use with your device.

Run Blinky

Click the [Demos] tile to load the available demos. Select [Rainbow Blinky] and click [Start] to download and run the demo. Follow the instructions on the kit LCD screen to run the demo.

2. Resources

Demos

Demos are a quick and easy way to evaluate a device without compiling or debugging code. Demos can be accessed using the [Get-ting Started]>[Demos] area in the launcher.

Software Examples

Software examples can be imported, compiled, and downloaded using the [Getting Started]>[Software Examples] area in the launcher.
