

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

SM802105

ClockWorks™ 10GbE
(156.25MHz, 312.5MHz), Ultra-Low Jitter,
LVPECL Frequency Synthesizer

General Description

The SM802105 is a member of the ClockWorks™ family of devices from Micrel and provides an extremely low-noise timing solution for 10GbE Ethernet clock signals. It is based upon a unique patented RotaryWave® architecture that provides very-low phase noise.

The device operates from a 3.3V or 2.5V power supply and synthesizes LVPECL output clocks at 156.25MHz or 312.5MHz. There are normally two clock outputs but one output can be achieved by powering down the second output with the OE pin. The SM802105 accepts a 25MHz crystal or LVCMOS reference clock.

Data sheets and support documentation can be found on Micrel's web site at: www.micrel.com.

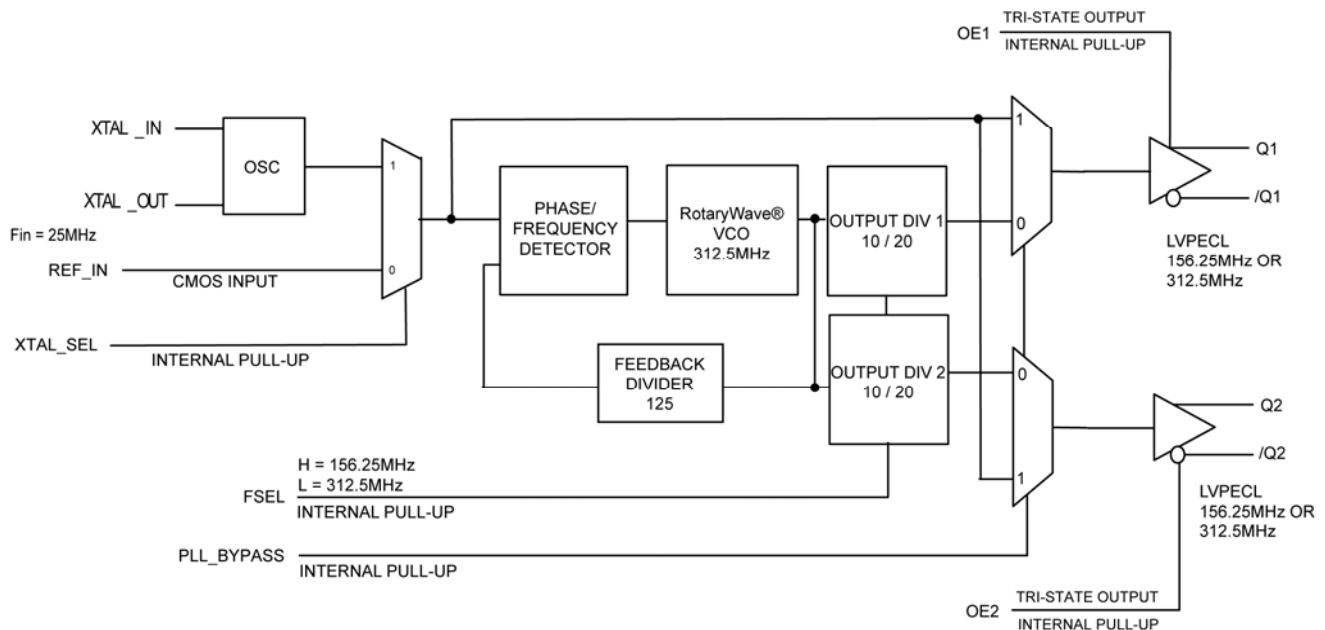

Features

- Generates one or two LVPECL clock outputs at 156.25MHz or 312.5MHz
- 2.5V or 3.3V operating range
- Typical phase jitter @ 156.25MHz (1.875MHz to 20MHz): 110fs
- Industrial temperature range
- Green, RoHS, and PFOS compliant
- Available in 24-pin 4mm × 4mm QFN package

Applications

- 10Gigabit Ethernet

Pin Description

Pin Number	Pin Name	Pin Type	Pin Level	Pin Function
19, 20	/Q1, Q1	O, (DIF)	LVPECL	Differential Clock Output from Bank 1 156.25MHz or 312.5MHz
22, 23	/Q2, Q2	O, (DIF)	LVPECL	Differential Clock Output from Bank 2 156.25MHz or 312.5MHz
24	VDDO2	PWR		Power Supply for Output Bank 2
2	VSSO2	PWR		Power Supply Ground for Output Bank 2
3	PLL_BYPASS	I, (SE)	LVC MOS	PLL Bypass, Selects Output Source 0 = Normal PLL Operation 1 = Output from Input Reference Clock or Crystal 45KΩ pull-down
4	XTAL_SEL	I, (SE)	LVC MOS	Selects PLL Input Reference Source 0 = REF_IN, 1 = XTAL, 45KΩ pull-up

Pin Description (Continued)

Pin Number	Pin Name	Pin Type	Pin Level	Pin Function
5, 11, 16, 18	TEST			Factory Test pins, Do not connect anything to these pins.
1	VDD	PWR		Core Power Supply
13, 14, 15	VSS	PWR		Core Power Supply Ground
17	VDDO1	PWR		Power Supply for Output Bank 1
21	VSSO1	PWR		Power Supply Ground for Output Bank 1
8	REF_IN	I, (SE)	LVC MOS	Reference Clock Input
9	XTAL_IN	I, (SE)	12pF crystal	Crystal Reference Input, no load caps needed. See Fig. 5.
10	XTAL_OUT	O, (SE)	12pF crystal	Crystal Reference Output, no load caps needed. See Fig. 5.
6	FSEL	I, (SE)	LVC MOS	Frequency Select, 1 = 156.25MHz, 0 = 312.5MHz, 45K Ω pull-up
7	OE1	I, (SE)	LVC MOS	Output Enable, Q1 disables to tri-state, 0 = Disabled, 1 = Enabled, 45K Ω pull-up
12	OE2	I, (SE)	LVC MOS	Output Enable, Q2 disables to tri-state, 0 = Disabled, 1 = Enabled, 45K Ω pull-up

Application Information

Input Reference

When operating with a crystal input reference, do not apply a switching signal to REF_IN.

Crystal Layout

Keep the layers under the crystal as open as possible.

Do not place switching signals or noisy supplies under the crystal.

Truth Tables

PLL_BYPASS	XTAL_SEL	INPUT	OUTPUT
0	–	–	PLL
1	–	–	XTAL/REF_IN
–	0	REF_IN	–
–	1	XTAL	–

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
V_{OH}	Output High Voltage		$V_{DDO} - 1.145$	$V_{DDO} - 0.97$	$V_{DDO} - 0.845$	V
V_{OL}	Output Low Voltage		$V_{DDO} - 1.945$	$V_{DDO} - 1.77$	$V_{DDO} - 1.645$	V
V_{SWING}	Output Voltage Swing		0.6	0.8	1.0	V

Notes:

- Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
- The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
- Package thermal resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB.
- The circuit is designed to meet the AC and DC specifications shown in the above table(s) after thermal equilibrium has been established.

LVC MOS (PLL_BYPASS, XTAL_SEL, OE1/2, FSEL) DC Electrical Characteristics⁽⁴⁾

$V_{DD} = 3.3V \pm 5\%$, or $2.5V \pm 5\%$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$.

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units

$T_{jit}(\emptyset)$	RMS Phase Jitter ⁽⁸⁾	156.25MHz Integration Range (1.875MHz – 20MHz) Integration Range (12kHz – 20MHz) 312.5MHz Integration Range (1.875MHz – 20MHz) Integration Range (12kHz – 20MHz)		110 250 110 250		fs
	Spurious Noise Components	6.25MHz using 156.25MHz 12.5MHz using 312.5MHz		-80 -85		dBc

Notes:

- All phase noise measurements were taken with an Agilent 5052B phase noise system.
- Crystal tolerance at room less than $\pm 15\text{ppm}$, over temp less than $\pm 20\text{ppm}$.
- Defined as skew between outputs at the same supply voltage and with equal load conditions and same frequency; Measured at the output differential crossing points.
- Measured using 25MHz crystal as the input reference source. If using an external reference input, use a low phase noise source. With an external reference, the phase noise will follow the input source phase noise up to about 1MHz.
