Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

SMP100MC

Trisil™ for telecom equipment protection

Features

- Bidirectional crowbar protection
- Voltage: range from 140 V to 400 V
- Low V_{BO} / V_R ratio
- Micro capacitance from 15 pF to 30 pF @ 50 V
- Low leakage current: I_R = 2 µA max
- Holding current: I_H = 150 mA min.
- Repetitive peak pulse current: I_{PP} = 100 A (10/1000 µs)

Benefits

- Trisils are not subject to ageing and provide a fail safe mode in short circuit for better protection.
- Helps equipment meet main standards such as UL60950, IEC 950 / CSA C22.2 and UL1459.
- Epoxy meets UL94, V0.
- Package is JEDEC registered (DO-214AA).

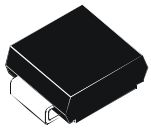
Complies with the following standards

- GR-1089 Core
- ITU-T-K20/K21
- IEC 61000-4-5
- TIA/EIA IS-968
- UL497B recognized, UL file E136224

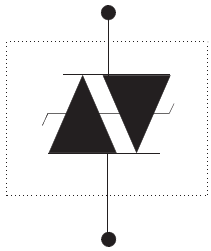
Applications

Any sensitive equipment requiring protection against lightning strikes and power crossing:

- Terminals (phone, fax, modem...) and central office equipment
- ADSL2+ and low end VDSL



SMB
(JEDEC DO-214AA)



Description

The SMP100MC is a series of micro capacitance transient surge arrestors designed for the protection of high debit rate communication equipment. Its micro capacitance avoids any distortion of the signal and is compatible with digital transmission line cards (ADSL, VDSL, ISDN...).

SMP100MC series has been tested and confirmed compatible with Cooper Bussmann Telecom Circuit Protector TCP 1.25 A.

TM: Trisil is a trademark of STMicroelectronics.

1 Characteristics

Table 1. In compliance with the following standards

Standard	Peak surge voltage (V)	Waveform voltage	Required peak current (A)	Current waveform	Minimum serial resistor to meet standard (Ω)
GR-1089 Core First level	2500 1000	2/10 µs 10/1000 µs	500 100	2/10 µs 10/1000 µs	0 0
GR-1089 Core Second level	5000	2/10 µs	500	2/10 µs	0
GR-1089 Core Intra-building	1500	2/10 µs	100	2/10 µs	0
ITU-T-K20/K21	6000 1500	10/700 µs	150 37.5	5/310 µs	0 0
ITU-T-K20 (IEC61000-4-2)	8000 15000	1/60 ns	ESD contact discharge ESD air discharge		0 0
IEC61000-4-5	4000 4000	10/700 µs 1.2/50 µs	100 100	5/310 µs 8/20 µs	0 0
TIA/EIA IS-968, lightning surge type A	1500 800	10/160 µs 10/560 µs	200 100	10/160 µs 10/560 µs	0 0
TIA/EIA IS-968, lightning surge type B	1000	9/720 µs	25	5/320 µs	0

Table 2. Absolute ratings (T_{amb} = 25 °C)

Symbol	Parameter		Value	Units
I_{PP}	Repetitive peak pulse current	10/1000 µs 8/20 µs 10/560 µs 5/310 µs 10/160 µs 1/20 µs 2/10 µs	100 300 140 150 200 300 500	A
I_{FS}	Fail-safe mode: maximum current(1)	8/20 µs	5	kA
I_{TSM}	Non repetitive surge peak on-state current (sinusoidal)	t = 0.2 s t = 1 s t = 2 s t = 15 mn	18 9 7 4	A
I^2t	I^2t value for fusing	t = 16.6 ms t = 20 ms	20 21	A^2s
T_{stg}	Storage temperature range		-55 to 150	°C
T_j	Operating junction temperature range		-40 to 150	°C
T_L	Maximum lead temperature for soldering during 10 s.		260	°C

1. In fail safe mode the device acts as a short circuit.

Table 3. Thermal resistances

Symbol	Parameter	Value	Unit
$R_{th(j-a)}$	Junction to ambient (with recommended footprint)	100	°C/W
$R_{th(j-l)}$	Junction to leads	20	°C/W

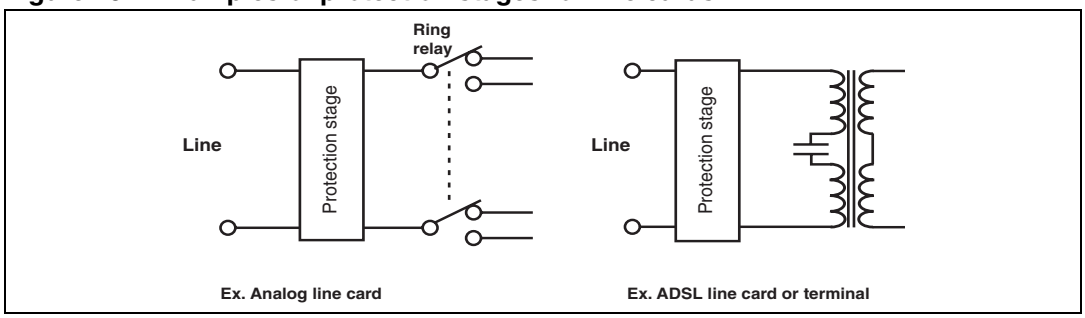
2 Application information

In wire line applications, analog or digital, both central office and subscriber sides have to be protected. This function is assumed by a combined series / parallel protection stage

Figure 10. Examples of protection stages for line cards



In such a stage, parallel function is assumed by one or several Trisil, and is used to protect against short duration surge (lightning). During this kind of surges the Trisil limits the voltage across the device to be protected at its break over value and then fires. The fuse assumes the series function, and is used to protect the module against long duration or very high current mains disturbances (50/60Hz). It acts by safe circuits opening. Lightning surge and mains disturbance surges are defined by standards like GR1089, TIA/EIA IS-968, ITU-T K20.

Figure 11. Typical circuits

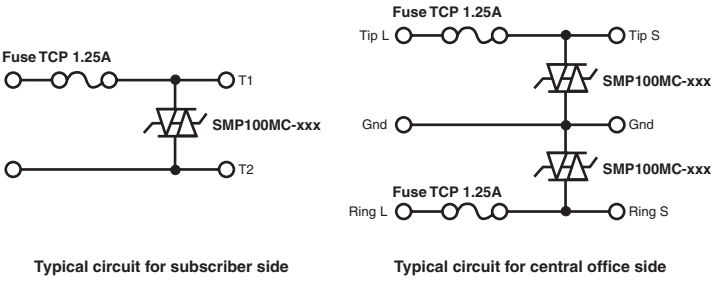


Figure 12. Test method of the board having fuse and Trisil

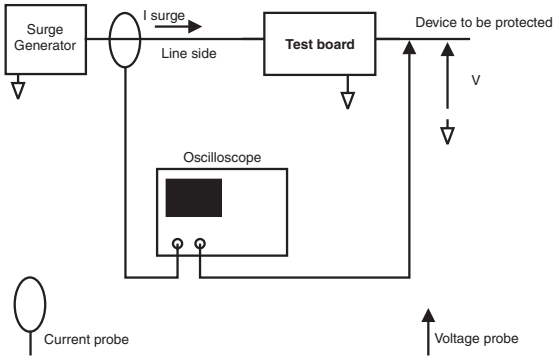
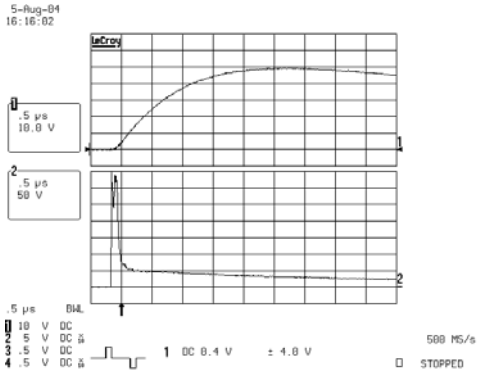


These topologies, using SMP100MC from ST and TCP1.25 A from Cooper Bussmann, have been functionally validated with a Trisil glued on the PCB. Following example was performed with SMP100MC-270 Trisil. For more information, see Application Note AN2064.

Figure 13. Trisil turns on during lightning surge



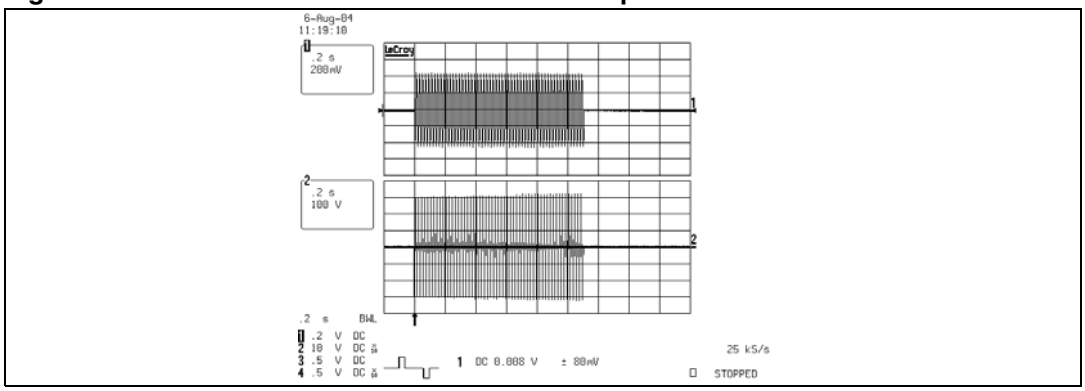
Test conditions:

2/10 µs + and -2.5 and 5 kV 500 A (10 pulses of each polarity), T_{amb} = 25 °C

Test result:

Fuse and Trisil OK after test in accordance with GR1089 requirements.

Figure 14. Trisil action while the fuse remains operational



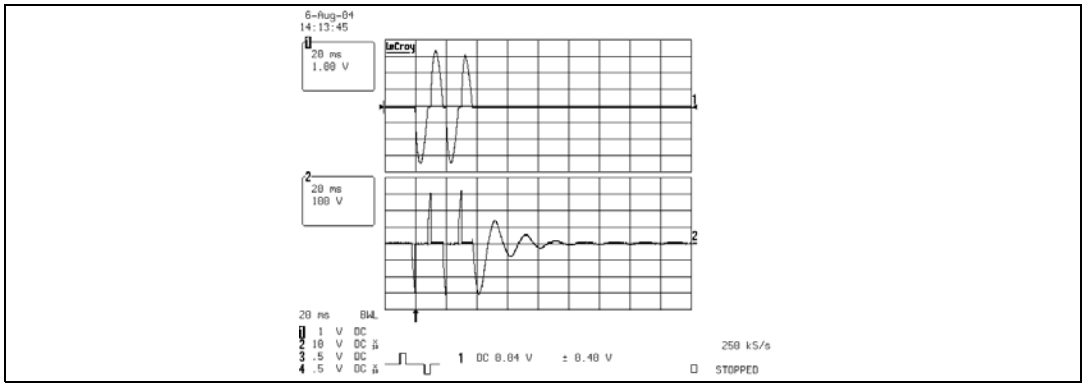
Test conditions:

600 V 3 A 1.1 s (first level), T_{amb} = 25 °C

Test result:

Fuse and Trisil OK after test in accordance with GR1089 requirements

Figure 15. High current power cross test: the fuse acts like a switch by opening the circuit



Test conditions:

277 V 25 A (second level), T_{amb} = 25 °C

Test result:

Fuse safety opened and Trisil OK after test in accordance with GR1089 requirements.

Figure 16. Test circuit 1 for Dynamic I_{BO} and V_{BO} parameters

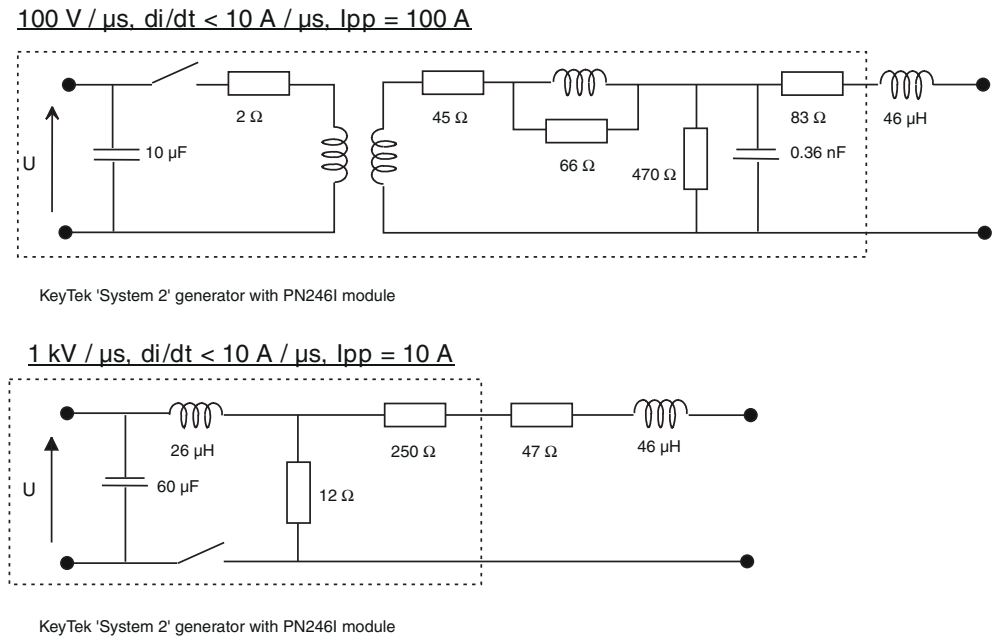


Figure 17. Test circuit 2 for I_{BO} and V_{BO} parameters

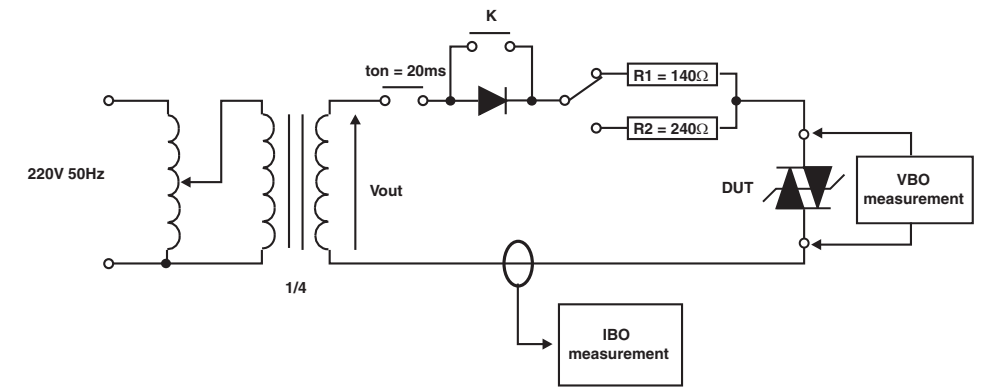


TEST PROCEDURE

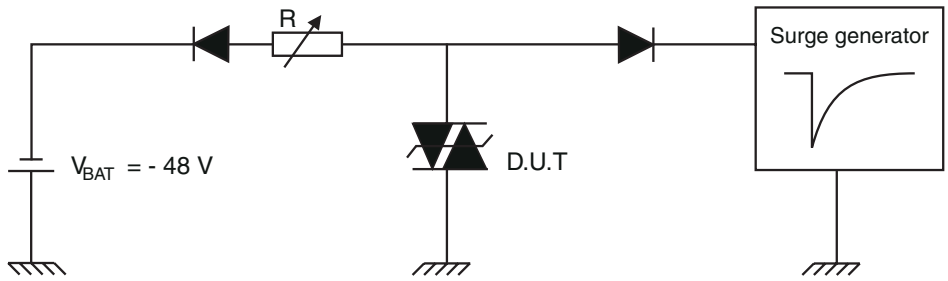
Pulse test duration (tp = 20ms):

- for Bidirectional devices = Switch K is closed
- for Unidirectional devices = Switch K is open

V_{OUT} selection:

- Device with $V_{BO} < 200$ V ➔ $V_{OUT} = 250\ V_{RMS}$, R1 = 140 Ω
- Device with $V_{BO} \geq 200$ V ➔ $V_{OUT} = 480\ V_{RMS}$, R2 = 240 Ω

Figure 18. Test circuit 3 for dynamic I_H parameter



This is a GO-NOGO test which allows to confirm the holding current (I_H) level in a functional test circuit.

TEST PROCEDURE

1/ Adjust the current level at the I_H value by short circuiting the AK of the D.U.T.

2/ Fire the D.U.T. with a surge current → I_{PP} = 10 A, 10/1000 µs.

3/ The D.U.T. will come back off-state within 50 ms maximum.
