

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Bluetooth® Classic module

Datasheet - preliminary data

- User interface
 - AT command Data Package (DP)
 - Firmware upgrade over UART
- ETSI, FCC, IC and Bluetooth qualified
- Single voltage supply: 3.3 V typical
- Small form factor: 15.24 x 26.9 x 2.9 mm
- Operating temperature range: -40 °C to 85 °C

Features

- Bluetooth radio
 - Fully embedded Bluetooth® v3.0 with SPP and HID profiles
 - Class 1 module
 - Complete RF-ready module
 - Embedded support for MFI iAP2 profile
 - 128-bit encryption security
 - Integrated antenna
- ST Cortex-M4 microprocessor
 - Up to 100 MHz
 - 512 KB Flash
 - 128 KB RAM
- Supports transmission speed with SPP up to 800 Kbits
- 14 general-purpose I/Os

1 Description

The SPBT3.0DP1 is an easy-to-use Bluetooth module that is compliant with Bluetooth v3.0.

The module has among the smallest form factors available in a complete Class 1 RF platform. The SPBT3.0DP1 enables electronic devices with wireless connectivity, requiring no RF experience or expertise to integrate into the final product. As a certified solution, the SPBT3.0DP1 module optimizes time-to-market for end-applications.

The module is designed for maximum performance in a minimal space including high speed UART and 14 general purpose I/O lines, and up to 800 kbps transmission speed with SPP service active and 250 kbps with iAP2 service active.

Its optimized design allows the integration of a complete working Bluetooth modem, including antenna, in the smallest possible size.

Deep Sleep mode reduces power consumption when a Bluetooth connection is not established.

The SPBT3.0DP1 is a surface-mount PCB module that provides fully embedded, ready-to-use Bluetooth wireless technology. The reprogrammable Flash memory contains embedded firmware for serial cable replacement using the Bluetooth SPP profile. Embedded Bluetooth Data Package (DP) firmware provides a user-friendly interface, offering simple control for cable replacement and enabling communication with most Bluetooth-enabled devices that support the SPP profile. The SPBT3.0DP1 supports the iAP2 profile, allowing communication with the newest Apple® iOS Bluetooth-enabled devices.

An Apple authentication IC is required to exchange data with an Apple device or access an Apple device application. The DP FW includes a Bluetooth iAP2 profile capable of recognizing the Apple authentication chip.

Customers using the Apple authentication IC must register as developers to become an Apple certified MFI member. License fees may apply. For additional information, please visit the Apple developer website.

Certified MFI developers developing electronic accessories that connect to the iPod®, iPhone® and iPad®, gain access to technical documentation, hardware components, technical support and certification logos.

Customized firmware for peripheral device interaction, power optimization, security, and other proprietary features may be supported and can be ordered pre-loaded and configured.

2 RoHS compliance

ST Bluetooth modules comply with the ECOPACK2 level of RoHS compliance.

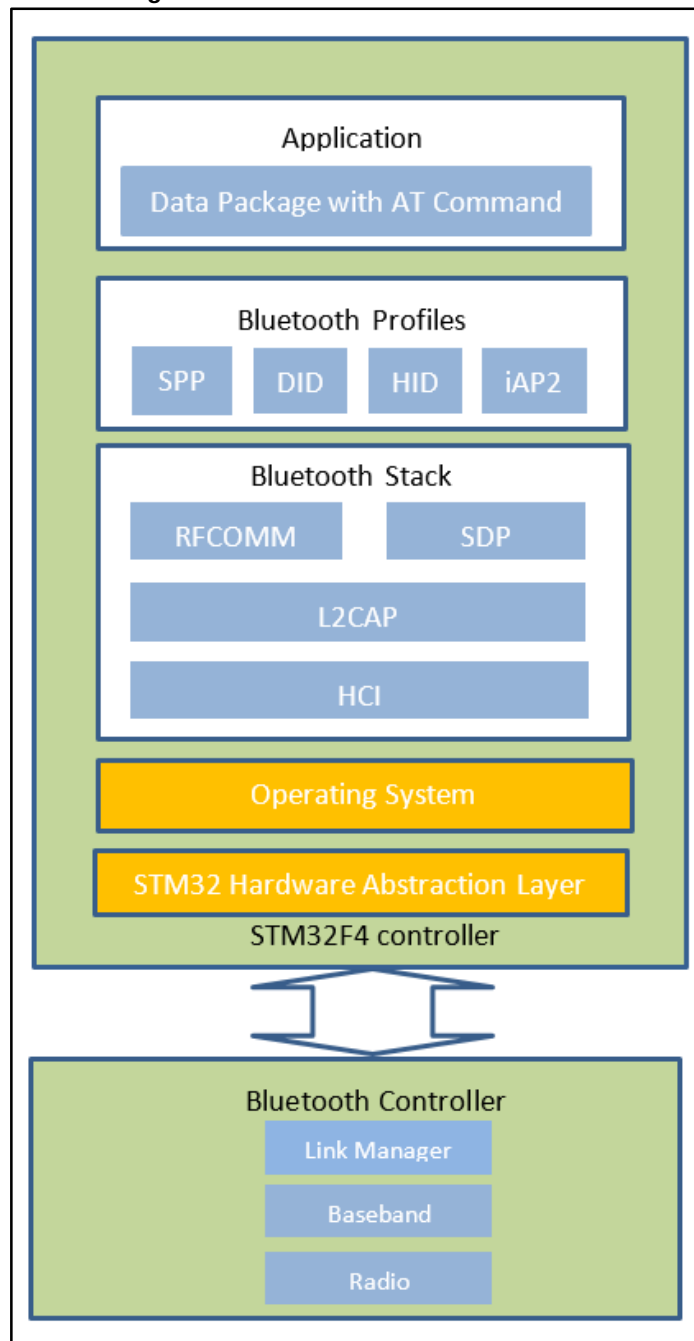

3 Applications

The SPBT3.0DP1 is suitable for a wide range of applications, such as:

- Serial cable replacement
- M2M industrial control
- Service diagnostics
- Data acquisition equipment
- Machine control
- Sensor monitoring
- Security systems
- Mobile health

4 Software architecture

Figure 1: Software architecture overview

4.1 BT stack layers

- Bluetooth v3.0
- Device power modes: active, deep sleep
- Connection modes: active, sniff
- Wake on Bluetooth feature optimizes power consumption of host CPU

- Authentication and encryption
- Encryption key length from 8 bits to 128 bits
- Secure simple pairing support
- Persistent Flash memory for BD address and user parameter storage
- All ACL (asynchronous connection-less) packet types
- Master/slave switch supported during connection and post connection
- Dedicated inquiry access code for improved inquiry scan performance
- Dynamic packet selection channel quality-driven data rate to optimize link performance
- Dynamic power control
- Bluetooth radio natively supports 802.11b co-existence AFH
- RFCOMM, SDP, and L2CAP protocols supported

4.2 Supported profile

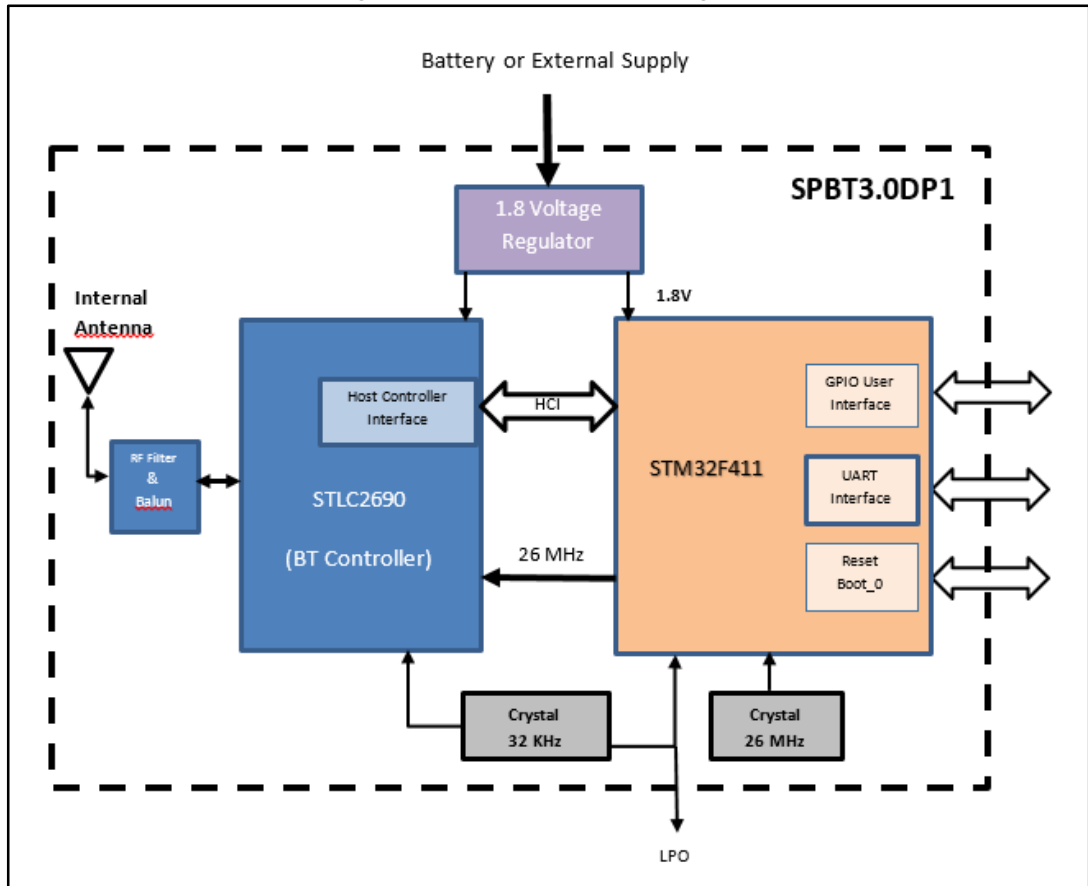

- Serial port profile (SPP)
- Human interface device (HID)
- iPhone accessory profile 2 (iAP2)
- Device identification profile (DID)

4.3 AT command set: Data Package

The complete command list is available in user manual UM2077 SPBT3.0DPx data package, which you can download from www.st.com.

5 Module block diagram

Figure 2: SPBT3.0DP1 block diagram

6 Hardware specifications

General conditions ($V_{IN} = 3.3\text{ V}$ and 25 °C).

6.1 Recommended operating conditions

Table 1: Recommended operating conditions

| Rating | Min. | Typical | Max. | Unit |
|-----------------------------|------|---------|------|------|
| Operating temperature range | - 40 | - | +8 5 | °C |
| Supply voltage V_{IN} | 2.1 | 3.3 | 3.6 | V |
| Signal pin voltage | - | 1.8 | - | V |

6.2 Radio features

Table 2: Radio features

| Feature | Min. | Typical | Max. | Unit |
|-------------------------|------|---------|-------|------|
| Bluetooth version | - | 3.0 | - | |
| Bluetooth class | - | 1 | - | |
| Radiated transmit power | - | - | 10.77 | dBm |
| Receiver sensitivity | - | -88 | - | dBm |
| RF frequency | 2402 | - | 2480 | MHz |

6.3 Absolute maximum ratings

Table 3: Absolute maximum ratings

| Rating | Min. | Typical | Max. | Unit |
|---------------------------|------|---------|------|------|
| Storage temperature range | -40 | - | +85 | °C |
| Supply voltage, V_{IN} | -0.3 | - | +5.5 | V |
| I/O pin voltage, V_{IO} | -0.3 | +1.8 | +2.1 | V |

6.4 Current consumption

Test conditions:

- Configuration variable: default
- Temperature: 25 °C

Table 4: Power consumption

| Modes (typical power consumption) | Typical | Unit |
|---|---------|------|
| No connection, Page/Inquiry Scan, Deep Sleep Mode | 1.5 | mA |
| No connection, Page/Inquiry Scan, Active Mode | 9 | mA |
| Connection, no data traffic, Active Mode | 12 | mA |

| Modes (typical power consumption) | Typical | Unit |
|---|-------------------|------|
| Connection, no data traffic, Sniff Mode | 9.5 | mA |
| Connection, 450 Kbps tx rx data , Active mode | 26 ⁽¹⁾ | mA |

Notes:

⁽¹⁾Peak current during transmission: 80 mA.

6.5 I/O operating characteristics

Table 5: I/O operating characteristics

| Symbol | Parameter | Min. | Max. | Unit | Conditions |
|-----------------|---------------------------|------|------|------|-----------------------------------|
| V _{IL} | Low-level input voltage | - | 0.5 | V | V _{IN} , 3.3 V |
| V _{IH} | High-level input voltage | 1.3 | - | V | V _{IN} , 3.3 V |
| V _{OL} | Low-level output voltage | - | 0.5 | V | V _{IN} , 3.3 V |
| V _{OH} | High-level output voltage | 1.4 | - | V | V _{IN} , 3.3 V |
| I _{OL} | Low-level output current | - | 4 | mA | V _{OL} = 0.4 V |
| I _{OH} | High-level output current | - | 4 | mA | V _{OH} = 1.8 V |
| R _{PU} | Pull-up resistor | 30 | 50 | kΩ | Resistor turned on ⁽¹⁾ |
| R _{PD} | Pull-down resistor | 30 | 50 | kΩ | Resistor turned on ⁽¹⁾ |

Notes:

⁽¹⁾Normally not used. Firmware dependent.

6.6 Pin assignment

Figure 3: Pin assignment

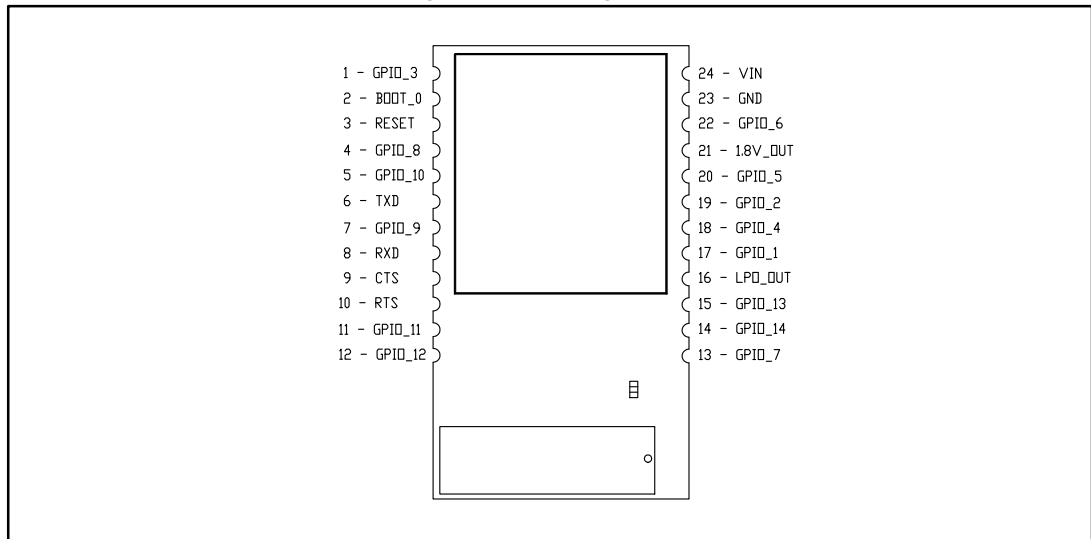

Table 6: Pin assignment

| Pin | Name | Description | I/O | Notes |
|-----|----------|--|-----|------------------------|
| 1 | GPIO_3 | General purpose I/O | I/O | 5 V tolerant |
| 2 | BOOT_0 | Boot pin | I | Internal 10K pull-down |
| 3 | RESET | Reset input (active low for 5 ms) | I | |
| 4 | GPIO_8 | General purpose I/O | I/O | 5 V tolerant |
| 5 | GPIO_10 | General purpose I/O | I/O | 5 V tolerant |
| 6 | TXD | Transmit Data | O | 5 V tolerant |
| 7 | GPIO_9 | General purpose I/O | I/O | 5 V tolerant |
| 8 | RXD | Receive Data | I | 5 V tolerant |
| 9 | CTS | Clear to send (active low) | I | 5 V tolerant |
| 10 | RTS | Request to send (active low) | O | 5 V tolerant |
| 11 | GPIO_11 | I2C_SCL line for MFI chip or General purpose I/O | I/O | 5 V tolerant |
| 12 | GPIO_12 | I2C_SDA line for MFI chip or General purpose I/O | I/O | 5 V tolerant |
| 13 | GPIO_7 | General purpose I/O | I/O | 5 V tolerant |
| 14 | GPIO_14 | General purpose I/O | I/O | 5 V tolerant |
| 15 | GPIO_13 | General purpose I/O | I/O | 5 V tolerant |
| 16 | LPO_OUT | Low power 32KHz oscillator output | O | |
| 17 | GPIO_1 | GPIO indicating BT Connection Status <ul style="list-style-type: none"> • 1: BT connection is active • 0: BT connection is not active | O | 5 V tolerant |
| 18 | GPIO_4 | GPIO indicating Module Power Status <ul style="list-style-type: none"> • 1: active mode • 0: Deep Sleep Mode | O | 5 V tolerant |
| 19 | GPIO_2 | General purpose I/O | I/O | |
| 20 | GPIO_5 | General purpose I/O | I/O | |
| 21 | 1.8V_OUT | +1.8V out (max 10mA) | | |
| 22 | GPIO_6 | General purpose I/O | I/O | 5 V tolerant |
| 23 | GND | Reference ground | | |
| 24 | VIN | Main power supply input | | |

7 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: www.st.com. ECOPACK® is an ST trademark.

7.1 RF module package information

Figure 4: RF module package outline (dimensions in mm)

Figure 5: Recommended land (top view) pattern (dimensions in mm)

8 Hardware design

The SPBT3.0DP1 module with Data Package embedded firmware supports UART, I²C and GPIO hardware interfaces.

Note:

- All unused pins should be left floating; do not ground.
- All GND pins must be well grounded.
- The area around the module should be free of any ground planes, power planes, trace routings, or metal for 6 mm from the module antenna position, in all directions.
- Traces should not be routed under the module.

8.1 Reflow soldering

The SPBT3.0DP1 is a high temperature-strength surface-mount Bluetooth module supplied on a PCB with the following characteristics: 24-pin, 6-layer . The recommended final assembly reflow profiles are indicated below.

The soldering phase must be executed with care. To prevent undesired melting, particular attention must be paid to the setup of the peak temperature.

The following soldering indications are based on temperature profile recommendations.

Table 7: Soldering

| Profile feature | PB-free assembly |
|---|--------------------------------|
| Average ramp-up rate ($T_{S_{MAX}}$ to T_P) | 3 °C/sec max |
| Preheat: – Temperature min. (T_S min.) – Temperature max. (T_S max.) – Time (t_s min. to t_s max.)(t_s) | 150 °C 200 °C 60-100 sec |
| Time maintained above: – Temperature T_L – Temperature T_L | 217 °C 60-70 sec |
| Peak temperature (T_P) | 240 + 0 °C |
| Time within 5 °C of actual peak temperature (T_P) | 10-20 sec |
| Ramp-down rate | 6 °C/sec |
| Time from 25 °C to peak temperature | 8 minutes max. |

Figure 6: Soldering profile

8.2 UART interface

The UART is compatible with the 16550 industry standard. Four signals are provided with the UART interface. The TXD and RXD pins are used for data, while the CTS and RTS pins are used for flow control.

Figure 7: Connection to host device

Figure 8: Typical RS232 circuit

8.3 GPIO interface

Module GPIO configuration depends on the Data Package embedded firmware.

By default the GPIO1, GPIO4, GPIO11 and GPIO12 have specific functions. The remaining GPIOs are available to the HOST processor that can configure them using AT commands.

GPIO1: Bluetooth Connection Status

- 0: BT connection not present
- 1: BT connection is present

GPIO4: Module Power Status:

- 1: module is in Active Mode
- Blinking: module is in Deep Sleep Mode

GPIO11: I²C SCL pin to be connected to MFi co-processor. External pull-up resistor is needed.

GPIO12: I²C SDA pin to be connected to MFi co-processor. External pull-up resistor is needed.

GPIOs without a specific functionality can be handled by the HOST processor using the following commands:

- AT+AB GPIOConfig [GPIO pin] [I/O]
- AT+AB GPIORead [GPIO pin]
- AT+AB GPIOWrite [GPIO pin] [1/0]

For more details refer to the AT Command Data Package user manual.

All GPIOs are capable of sinking and sourcing 4 mA of I/O current.

8.4 Reset circuit

Two types of system reset circuits are detailed below.

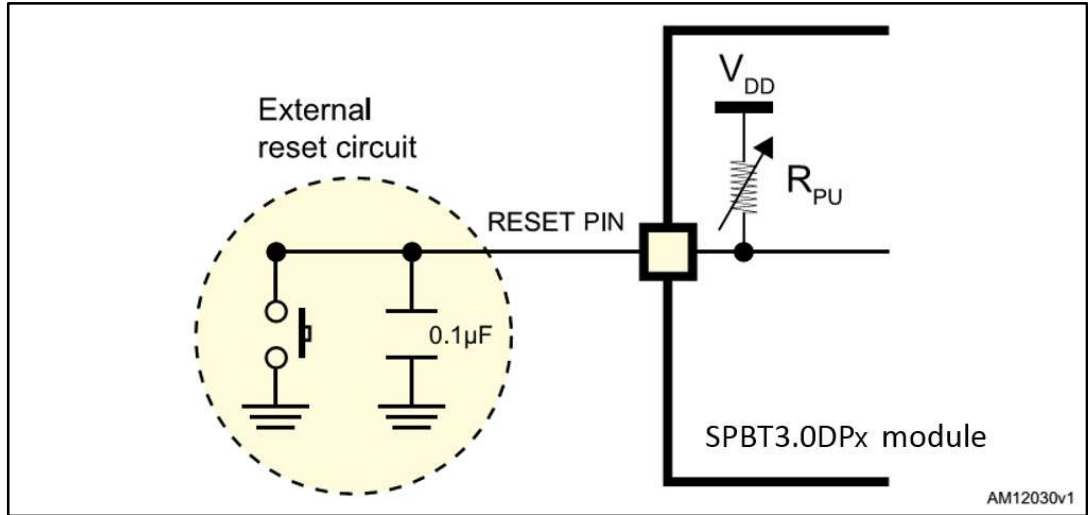

The maximum voltage that can be supplied to the RESET pin is 3.6 V. As shown in [Figure 9: "Simple external reset circuit"](#) and [Figure 10: "Host controlled reset circuit"](#) the RESET is

active low, in the absence of a reset circuit the pin is internally pulled up and therefore inactive.

8.4.1 Simple external reset circuit

The figure below shows a simple push-button reset circuit.

Figure 9: Simple external reset circuit

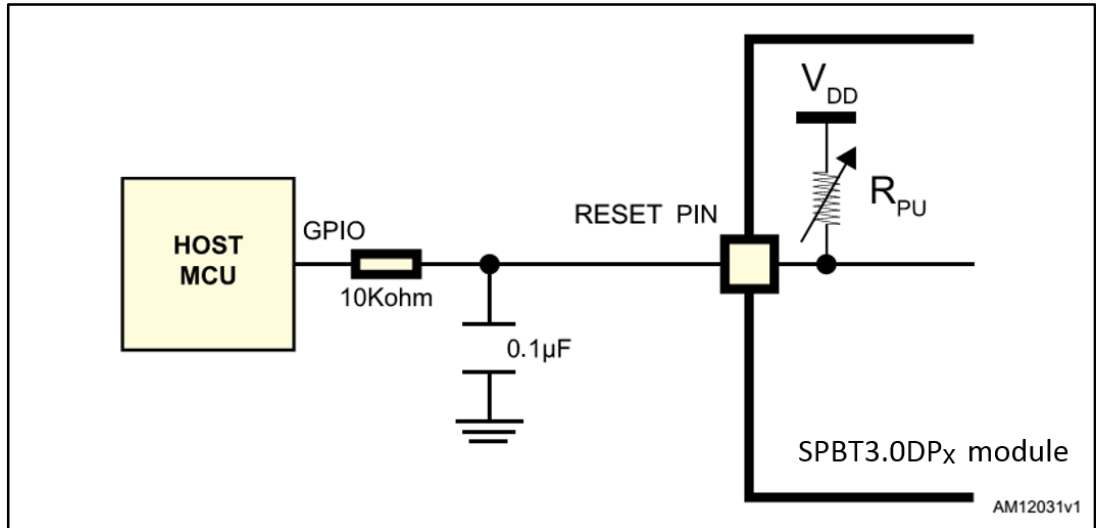

Note: RPU ranges from 30 kΩ to 50 kΩ internally provided.

8.4.2 Host controlled reset circuit

The figure below shows a typical host controlled reset circuit.

Figure 10: Host controlled reset circuit

Note:

- RPU ranges from 30 kΩ 50 kΩ internally.
- The host reset resistor should be from 1 kΩ to 10 kΩ

8.5 MFi co-processor interface

A specific MFi co-processor is needed to enable iAP2 profile for connection with Apple devices. The MFi co-processor component details are available for licensed MFi developers from the MFi program.

The MFi co-processor can be connected to the module through the I2C pins. External pull-up resistors are needed on both lines.

The Data Package firmware handles the communication with the MFi co-processor.

8.6 PCB layout guidelines

The SPBT3.0DP1 module require proper placement on PCB to ensure optimal performance. The antenna on the PCB has an omnidirectional radiation pattern. To maximize antenna efficiency, an adequate grounding plane must be provided under the module, respecting the distance for the antenna clearance.

The position of the module on the host board and overall design of the product enclosure contributes to the antenna performance. Poor design can limit the antenna radiation patterns and can result in reflection, diffraction, and/or scattering of the transmitted signal thus limiting the useful operating range.

Basic guidelines:

- Never place the ground plane or route copper traces directly underneath the antenna portion of the module
- Keep a 6 mm clear zone surrounding the antenna (no ground planes, no traces)
- Never place the antenna close to metallic objects
- Keep wiring, components and objects away from antenna
- Do not place the antenna in a metallic or metalized plastic enclosure
- Enclosure walls should be 20 mm or more away from the antenna in all directions
- If possible, mount antenna overhanging the edge of the host board

9 Firmware upgrade

Bluetooth is a consolidated and well known standard, anyhow interoperability issues may arise whenever a new version of an operating system (Android, Windows, Linux, iOS, etc.) appear on the market. Bug fixes and new features may also become available.

The SPBT3.0DP1 Data Package firmware has been designed to be upgradable via UART interface.

It is recommended to support the firmware update procedure in order to always get the benefit of latest firmware versions.

ST may update the FW provided with the modules at any time. ST recommends that users regularly check for documentation.

The SPBT3.0DP1 module leverages the STM32 built-in bootloader to load the new firmware. It is a three-step procedure:

1. Enter bootloader mode
2. Transfer the new firmware
3. Exit bootloader mode

9.1 Enter bootloader mode

To enter the Bootloader mode:

1. Set the BOOT pin to HIGH level
2. Reset the module:
 - a. Set the RESET pin to HIGH
 - b. Pause
 - c. Set the RESET pin to LOW

9.2 Transfer the new firmware

The specification of the protocol used in the STM32 bootloader to download the new firmware is described in the document:

http://www.st.com/web/en/resource/technical/document/application_note/CD00264342.pdf

A reference implementation of the STM32 bootloader protocol can be found at the following link:

<http://sourceforge.net/projects/stm32flash/>

The STM32 Flash loader demonstrator, a Windows GUI that implement that protocol can be downloaded at the following link:

<http://www.st.com/web/en/catalog/tools/PF257525>

9.3 Exit bootloader mode

To exit Bootloader mode:

1. Set the BOOT pin to LOW
2. Reset the module:
 - a. Set the RESET pin to HIGH
 - b. Pause
 - c. Set the RESET pin to LOW

10 Regulatory compliance

10.1 FCC certification

This module has been tested and found to comply with FCC part 15 rules. These limits are designed to provide reasonable protection against harmful interference in approved installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference may not occur in any particular installation.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference
2. this device must accept any interference received, including interference that may cause undesired operation. Modifications or changes to this equipment not expressly approved by STMicroelectronics may render void the user's authority to operate this equipment.

The safe user distance for RF exposure is ≥ 5 mm (in compliance with 447498 D01 General RF Exposure Guidance v06).

Modular approval

FCC ID: S9NSPBT30DP1

In accordance with FCC part 15, the SPBT3.0DP1 is listed as a modular transmitter device.

This module is evaluated for stand-alone use only. Finished products incorporating multiple transmitters must comply with collocation and RF exposure requirements in accordance with FCC multi-transmitter product procedures. Collocated transmitters operating in portable RF exposure conditions (e.g. <20 cm from persons including but not limited to body-worn and handheld devices) may require separate approval.

10.1.1 FCC labeling instructions

When integrating the SPBT3.0DP1 into the final product, the OEM must ensure that the FCC labeling requirements are satisfied. A statement must be included on the exterior of the final product which indicates that the product includes a certified module. The label should state the following (or similar wording that conveys the same meaning):

Contains FCC ID: S9NSPBT30DP1

OR

This product contains FCC ID: S9NSPBT30DP1

The OEM must include the following statements on the exterior of the final product unless the product is too small (e.g. less than 4 x 4 inches) This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. this device may not cause harmful interference
2. this device must accept any interference received, including any interference that may cause undesired operation.

10.1.2 Product manual instructions for FCC compliance

This section applies to OEM final products containing the SPBT3.0DP1 module, subject to FCC compliance. The final product manual must contain the following statement (or a similar statement that conveys the same meaning):

Warning: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. (Part. 15.21)

In the case where an OEM seeks Class B (residential) limits for the final product, the following statement must be included in the final product manual:

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- *Reorient or relocate the receiving antenna.*
- *Increase the separation between the equipment and receiver.*
- *Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.*
- *Consult the dealer or an experienced radio/TV technician for help.*

In cases where an OEM seeks the lesser category of a Class A digital device for the final product, the following statement must be included in the final product manual:

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his expense.

10.2 IC certification

The SPBT3.0DP1 module has been tested and found compliant with the IC RSS-210 rules. These limits are designed to provide reasonable protection against harmful interference in approved installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference may not occur in any particular installation.

This device complies with RSS-210 of the IC rules. Operation is subject to the following two conditions:

1. this device may not cause harmful interference
2. this device must accept any interference received, including interference that may cause undesired operation.

Modifications or changes to this equipment not expressly approved by STMicroelectronics may render void the user's authority to operate this equipment.
