

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# High Voltage LED Series Chip on Board

# LC013B

High efficacy COB LED package, well-suited for use in spotlight applications

#### **Features & Benefits**

- Chip on Board (COB) solution makes it easy to design in
- Simple assembly reduces manufacturing cost
- Low thermal resistance
- InGaN/GaN MQW LED with long time reliability
- Completed 6,000 hours of LM-80 Testing
- ENEC certified: Integral LED Module

#### **Applications**

- Spotlight / Downlight
- LED Retrofit Bulbs
- Outdoor Illumination

#### **Table of Contents**

#### 1. Characteristics

#### a) Absolute Maximum Rating

| ltem                            | Symbol         | Rating     | Unit | Condition |
|---------------------------------|----------------|------------|------|-----------|
| Ambient / Operating Temperature | Ta             | -40 ~ +105 | °C   | -         |
| Storage Temperature             | $T_{stg}$      | -40 ~ +120 | °C   | -         |
| LED Junction Temperature        | Tj             | 150        | °C   | -         |
| Case Temperature                | Tc             | 105        | °C   | *Note     |
| Forward Current                 | l <sub>F</sub> | 660        | mA   | -         |
| Power Dissipation               | $P_D$          | 24.4       | W    | -         |
| ESD (HBM)                       | -              | ±2         | kV   | -         |
| ESD (MM)                        | _              | ±0.5       | kV   | _         |

#### b) Electro-optical Characteristics (I<sub>F</sub> = 360 mA, $T_c$ = 25 °C)

| ltem                                        | Unit | Rank   | Min. | Тур. | Max. |
|---------------------------------------------|------|--------|------|------|------|
| Forward Voltage (V <sub>F</sub> )           | V    | YH     | 32.5 | 35.5 | 38.5 |
|                                             |      | 3      | 70   | -    | _    |
| Color Donalarina Indov (D.)                 |      | 5      | 80   | -    | _    |
| Color Rendering Index (Ra)                  | -    | 7      | 90   | -    | _    |
|                                             |      | 8      | 95   |      |      |
| Thermal Resistance (junction to chip point) | °C/W |        | -    | 1.6  | -    |
| Beam Angle                                  | 0    |        | _    | 115  | _    |
| Working Voltage for Insulation              | V    |        |      |      | 50   |
| Nominal Power                               | W    |        |      | 12.8 |      |
| Eye Protection                              |      | Risk 1 | _    |      | _    |

#### Notes:

- 1) The COB is tested in pulsed condition at rated test current (10 ms pulse width) and rated temperature ( $T_i = T_c = T_a = 25$  °C)
- 2) Samsung maintains measurement tolerance of: forward voltage =  $\pm 5$  %, CRI =  $\pm 1$
- 3) Max Tc=105℃ (at max current) is for ENEC condition. Refer to the derating curve, '3. Typical Characteristics Graph' designed within the range.

#### c) Luminous Flux Characteristics (I<sub>F</sub> = 360 mA)

| CRI (R <sub>a</sub> ) | Nominal | Flux | Flux | Sorting <sup>1)</sup> @ <sup>-</sup> | Γ <sub>c</sub> = 25 °C (lm) | Calculated Flux <sup>2)</sup> | $@T_c = 85 °C (Ir)$ |
|-----------------------|---------|------|------|--------------------------------------|-----------------------------|-------------------------------|---------------------|
| Min.                  | CCT (K) | Rank | Bin  | Min.                                 | Max.                        | Min.                          | Max.                |

#### Notes:

- 1) The COB is tested in pulsed condition at rated test current (10 ms pulse width) and rated temperature ( $T_i = T_c = T_a = 25$  °C)
- 2) Calculated flux values are for reference only
- 3) Samsung maintains measurement tolerance of: luminous flux =  $\pm 7$  %, CRI =  $\pm 1$

#### e) Silica Gel & Humidity Indicator Card inside Aluminum Vinyl Packing Bag

#### 8. Precautions in Handling & Use

- 1) This device should not be used in any type of fluid such as water, oil, organic solvent, etc. When cleaning is required, IPA is recommended as the cleaning agent. Some solvent-based cleaning agent may damage the silicone resins used in the device.
- 2) LEDs must be stored in a clean environment. If the LEDs are to be stored for three months or more after being shipped from Samsung, they should be packed with a nitrogen-filled container (shelf life of sealed bags is 12 months at temperature 0~40 °C, 0~90 % RH).
- 3) After storage bag is opened, device subjected to soldering, solder reflow, or other high temperature processes must be:
  - a. Mounted within 672 hours (28 days) at an assembly line with a condition of no more than 30 °C / 60 % RH, or
  - b. Stored at <10 % RH
- 4) Repack unused products with anti-moisture packing, fold to close any opening and then store in a dry place.
- 5) Devices require baking before mounting, if humidity card reading is >60 % at 23 ± 5 °C.
- 6) Devices must be baked for 1 hour at  $60 \pm 5$  °C, if baking is required.
- 7) The LEDs are sensitive to the static electricity and surge current. It is recommended to use a wrist band or antielectrostatic glove when handling the LEDs. If voltage exceeding the absolute maximum rating is applied to LEDs, it may cause damage or even destruction to LED devices. Damaged LEDs may show some unusual characteristics such as increase in leakage current, lowered turn-on voltage, or abnormal lighting of LEDs at low current.
- 8) VOCs (Volatile Organic Compounds) can be generated from adhesives, flux, hardener or organic additives used in luminaires (fixtures). Transparent LED silicone encapsulant is permeable to those chemicals and they may lead to a discoloration of encapsulant when they exposed to heat or light. This phenomenon can cause a significant loss of light emitted (output) from the luminaires. In order to prevent these problems, we recommend users to know the physical properties of materials used in luminaires and they must be carefully selected.
- 9) The resin area is very sensitive, please do not handle, press, touch, rub, clean, or pick by with tweezers on it. Instead, please pick at the handling area as indicated below.
