Digital SiSonic™ Microphone With Multiple Performance Modes

The SPK0641HT4H-1 is a miniature, high-performance, low power, top port silicon digital microphone with a single-bit PDM output. Using Knowles' proven high performance SiSonic™ MEMS technology, the SPK0641HT4H-1 consists of an acoustic sensor, a low noise input buffer, and a sigma-delta modulator. Notes: All Ground pins must be connected to ground.

Bypass capacitors should be placed next to each microphone's Vdd pin for best performance.

Capacitors near the microphone should not contain Class 2 dielectrics due to their piezoelectric effect.

Detailed information on acoustic, mechanical, and system integration can be found in the latest *SiSonic™ Design Guide* application note.

Microphones which share common clock and data lines must also share a common power source.
