

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

UPS Controller  
Type SPUC 30A 12 / 24V  
DIN Rail Mounting

- DIN Rail mounting UPS controller
- To be used in combination up to 30A power Supply
- Built-in battery test function
- Battery polarity protection
- Relay contact signal output LED indicator for DC Bus ok, battery fail and battery discharge
- Suggested batteries from 4 to 12Ah
- 3 years warranty

Ordering Key

SPUC 24 720

Model

Approvals

Product Description

The SPUC, being a UPS controller, it can be used to either convert and existing conventional supply system into an uninterruptible power supply system or else to realize a UPS system by using a separate power supply. It is suitable for both 12V and 24V systems and it can handle up to 30A load current whilst the suggested battery sizes are from 4 to 12Ah.

The input of the SPUC has to be connected to a 12Vdc or 24Vdc source, depending upon the model. The output is connected to the load which needs to be supplied uninterruptedly. The battery, suggested type is lead acid, is connected to the battery terminals. DIN rail mounting racks are also available, with or without batteries, for easy installation of the battery aside the SPUC. The

nominal charging voltage is 13.6V (or 27.2V). The charge is carried out in the first stage by constant current until the nominal voltage is reached then by constant voltage. When the battery is fully charged it stays into “float” cycle. Sulphatation process is prevented by charging with positive/negative pulse current. If the 24Vdc input is cut off because of mains failure

or blackout the SPUC will immediately switch the supply to the load by using the battery stored energy. There are three relays for remote operation monitoring: “DC OK” provides indication of correct DC output, “Battery fail” indicates a possible failure of the battery and “Backup Mode” provides remote indication that the device is providing power to the load from the battery not from input.

Output Performance

AVAILABLE MODELS	INPUT VOLTAGE	MAX. OUTPUT POWER	OUTPUT VOLTAGE	MAX. OUTPUT CURRENT
Single Output Models				
SPUC12360	11 ~ 14VDC	360 WATTS	10.5 ~ 13.5VDC	30A
SPUC24720	22.5 ~ 28VDC	720 WATTS	22 ~ 27.5VDC	30A
