Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Subminiature Basic Switch

## SS Series Compatible Mounting with a Simple Construction and Easy-to-Use Design Concept

- One-piece terminal construction to keep out flux.
- A single leaf movable spring construction.
- Conforms to North American and European safety Standards.
- 1 mm MIN Contact Gap Models available for Interlock applications

## RoHS Compliant

## Precautions

丸Please refer to "Common Precautions" for correct use.
Cautions

## OSoldering

- Connecting to Solder Terminals

Complete the soldering at the iron tip temperature of 350 to $400^{\circ} \mathrm{C}$ within 5 seconds, and do not apply any external force for 1 minute after soldering. Soldering at an excessively high temperature or soldering for more than 5 seconds may deteriorate the characteristics of the Switch.

- Connecting to PCB terminals

When using automatic soldering baths, we recommend soldering at $260 \pm 5^{\circ} \mathrm{C}$ within 5 seconds. Make sure that the liquid surface of the solder does not flow over the edge of the board.
When soldering terminals manually, complete the soldering at the iron tip temperature between 350 to $400^{\circ} \mathrm{C}$ within 3 seconds, and do not apply any external force for 1 minute after soldering. When applying solder, keep the solder away from the case of the Switch and do not allow solder or flux to flow into the case.

## Correct Use <br> - Mounting

Use M2.3 mounting screw with plane washers or spring washers to securely mount the Switch. Tighten the screws to a torque of 0.23 to $0.26 \mathrm{~N} \cdot \mathrm{~m}\{2.3$ to $2.7 \mathrm{kgf} \cdot \mathrm{cm}\}$.

## -Using Micro Loads

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the following operating range, if inrush current occurs when the contact is opened or closed, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary. The N-level reference value applies for the minimum applicable load. This value indicates the malfunction reference level for the reliability level of $60 \%\left(\lambda_{60}\right)$.
(JIS C5003)
The equation, $\lambda_{60}=0.5 \times 10^{-6} /$ operation indicates that the estimated malfunction rate is less than $\frac{1}{2,000,000}$ operations with a reliability level of $60 \%$.
