

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

The SST12LF03 is a fully integrated Front-End Module (FEM) for WLAN 802.11b/g/n and Bluetooth® systems. The SST12LF03 RF module includes a PA, a LNA, and an antenna switch, making it ideal for WLAN/BT embedded applications where small size and high performance are required. Designed in compliance with IEEE 802.11 b/g/n applications and based on GaAs PHEMT/HBT technology, the SST12LF03 operates within the frequency range of 2.4- 2.5 GHz with a very low DC-current consumption. The Transmitter chain has excellent linearity, typically 3% added EVM up to 19 dBm output power for 54 Mbps 802.11g operation, while meeting 802.11b spectrum mask at 22 dBm. The receiver chain provides a low noise amplifier and has options for simultaneous WLAN and Bluetooth operation. The SST12LF03 is offered in a 20-contact UQFN package.

Features

- Input/output ports are matched to 50Ω internally and DC decoupled.
- Packages available
 - 20-contact UQFN – 3mm x 3mm x 0.55mm
- All non-Pb (lead-free) devices are RoHS compliant

Transmitter Chain:

- High gain:
 - Typically 28 dB gain across 2.4–2.5 GHz over temperature -20°C to +85°C for Transmitter.
- High linear output power:
 - Meets 802.11g OFDM ACPR requirement up to 21 dBm
 - 3% added EVM up to 19 dBm for 54 Mbps 802.11g signal
 - Meets 802.11b ACPR requirement up to 22 dBm
- High power-added efficiency/Low operating current for 802.11b/g/n applications
 - ~25% @ P_{OUT} = 22 dBm for 802.11b/g
- Low I_{REF} power-up/down control
 - I_{REF} <2 mA
- Low quiescent current
 - ~55 mA I_Q
- High-speed power-up/down
 - Turn on/off time (10%- 90%) <100 ns
 - Typical power-up/down delay with driver delay included <200 ns
- Low shut-down current (~2 μA)
- Limited variation over temperature
 - ~1 dB power variation between -20°C to +85°C
 - ~2 dB gain variation between -20°C to +85°C

- Temperature and load insensitive on-chip power detector

- >20 dB dynamic range, temperature-stable, on-chip power detection

Receiver Chain:

- LNA ON:
 - Typically 12 dB gain
 - 3.1 dB noise figure
 - >5dB P1dB

Bluetooth Path:

- Typically 2.5 dB loss
- Simultaneous BT/WLAN Rx mode:
 - 8 dB gain
 - 3.1 dB noise figure

Applications

- WLAN (IEEE 802.11b/g/n)
- Home RF
- Cordless phones
- 2.4 GHz ISM wireless equipment
- Zigbee®
- Bluetooth®

Product Description

The SST12LF03 is a 2.4 GHz Front-end Module (FEM) designed in compliance with IEEE 802.11b/g/n applications. It combines a high-performance Power Amplifier (PA), a low-noise amplifier, and an antenna switch. The single-pole, three-throw, antenna switch provides WLAN transmit and receive capability as well as Bluetooth® connectivity. The receive path also allow for simultaneous WLAN and Bluetooth operation.

The TX chain includes a high-efficiency PA based on the InGaP/GaAs HBT technology. This chain typically provides 28 dB gain with 25% power-added efficiency (PAE) @ POUT = 22 dBm for 802.11g and 802.11b operation.

The TX chain has excellent linearity, typically 3% added EVM at 19 dBm output power for 54 Mbps 802.11g operation, while meeting 802.11g spectrum mask at 22 dBm.

The SST12LF03 also features easy board-level usage along with high-speed power-up/down controls. Ultra-low reference current (total I_{REF} ~2 mA) makes the SST12LF03 controllable directly from the baseband chip. These features, coupled with low operating current, make the SST12LF03 ideal for the final stage power amplification in battery-powered 802.11b/g/n WLAN transmitter applications.

The SST12LF03 transmitter has a linear on-chip, single-ended power detector, which is temperature stable, load insensitive, and has a linear dynamic range greater than 20 dB. The excellent on-chip power detector provides a reliable solution to board-level power control. In addition, the receiver path includes an LNA, has the option for simultaneous WLAN and Bluetooth operation, and an optional low-loss LNA bypass path. In WLAN operating mode, the receiver provides typically 12 dB gain and only 3.1 dB noise figure and >5 dB P1dB. Operating with simultaneous WLAN/BT, the receiver will provide both the WLAN and Bluetooth ports with 8 dB gain and 3.1 dB noise figure.

All input/output RF ports are single-ended, DC blocked, and internally matched to 50 Ω. No external DC-blocking capacitors or matching components are necessary. This helps reduce the system board Bill of Materials (BOM) cost.

The SST12LF03 is offered in a 20-contact UQFN package. See Figure 2 for pin assignments and Table 1 for pin descriptions.

Pin Descriptions

Table 1: Pin Description

Symbol	Pin No.	Pin Name	Type ¹	Function
DNC	1	Do Not Connect		Do not connect to this pin
SRX	2			WLAN Receive Antenna Switch control
DNC	3	Do Not Connect		Do not connect to this pin
STX	4	STX		WLAN Transmit Antenna Switch control
SREF	5	C _{REF}		Control pin reference high-level input
ANT	6	Antenna	I/O	Antenna port, AC coupled
SBT	7	SBT		BT antenna switch control
SBTR	8	SBTR		Switch control for simultaneous BT/RX
GND	9	Ground		Ground pin
VCC3	10	V _{CC3}	PWR	LNA power supply
BT	11			BT port, AC coupled
RX	12	R _X	I	WLAN receive port, AC coupled
GND	13	Ground		Ground pin
TX	14	T _X	O	WLAN transmit port, AC coupled
DNC	15	Do Not Connect		Do not connect to this pin
DET	16			WLAN transmit power detector
VCC1	17	V _{CC1}		WLAN power amplifier power supply #1
PEN	18			WLAN PA enable
LEN	19			LNA enable
VCC2	20	V _{CC2}	PWR	WLAN power amplifier power supply #2
Center	GND	Ground		Ground pin

Electrical Specifications

The DC and RF specifications for the power amplifier are specified below. Refer to Table 3 for the DC voltage and current specifications. Refer to Figures 3 through 9 for the RF performance.

Absolute Maximum Stress Ratings (Applied conditions greater than those listed under “Absolute Maximum Stress Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these conditions or conditions greater than those defined in the operational sections of this data sheet is not implied. Exposure to absolute maximum stress rating conditions may affect device reliability.)

Input power to pin 3 (P_{IN})	+5 dBm
Average output power from pin 11 (P_{OUT}) ¹	+26 dBm
Supply Voltage at pins 6 and 9 (V_{CC})	-0.3V to +4.2V
Reference voltage to pin 4 (V_{REF})	-0.3V to +3.3V
DC supply current (I_{CC}) ²	400 mA
Operating Temperature (T_A)	-40°C to +85°C
Storage Temperature (T_{STG})	-40°C to +120°C
Maximum Junction Temperature (T_J)	+150°C
Surface Mount Solder Reflow Temperature	260°C for 10 seconds

1. Never measure with CW source. Pulsed single-tone source with <50% duty cycle is recommended. Exceeding the maximum rating of average output power could cause permanent damage to the device.

2. Measured with 100% duty cycle 54 Mbps 802.11g OFDM Signal

Table 2: Operating Range

Range	Ambient Temp	V_{CC}
Extended	-20°C to +85°C	3.3V

Table 3: DC Electrical Characteristics

Symbol	Parameter	Min.	Typ	Max.	Unit
V_{CC}	TX Supply Voltage at pins 6 and 9	3.0	3.3	4.2	V
