## Product Description

SST12LP14A is a versatile power amplifier based on the highly-reliable InGaP/GaAs HBT technology.

The SST12LP14A can be easily configured for high-power applications with good power-added efficiency while operating over the 2.4- 2.5 GHz frequency band. It typically provides 29 dB gain with 23% power-added efficiency @  $P_{OUT} = 22$  dBm for 802.11g and 25% power-added efficiency @  $P_{OUT} = 23$  dBm for 802.11b.

The SST12LP14A has excellent linearity, typically ~3% added EVM at 21 dBm output power with 54 Mbps 802.11g operation while meeting 802.11g spectrum mask at 23 dBm. The SST12LP14A can also be configured for high-efficiency operation (typically 85 mA total power consumption at 17 dBm linear 54 Mbps 802.11g output power) which is desirable in embedded applications such as in hand-held units.

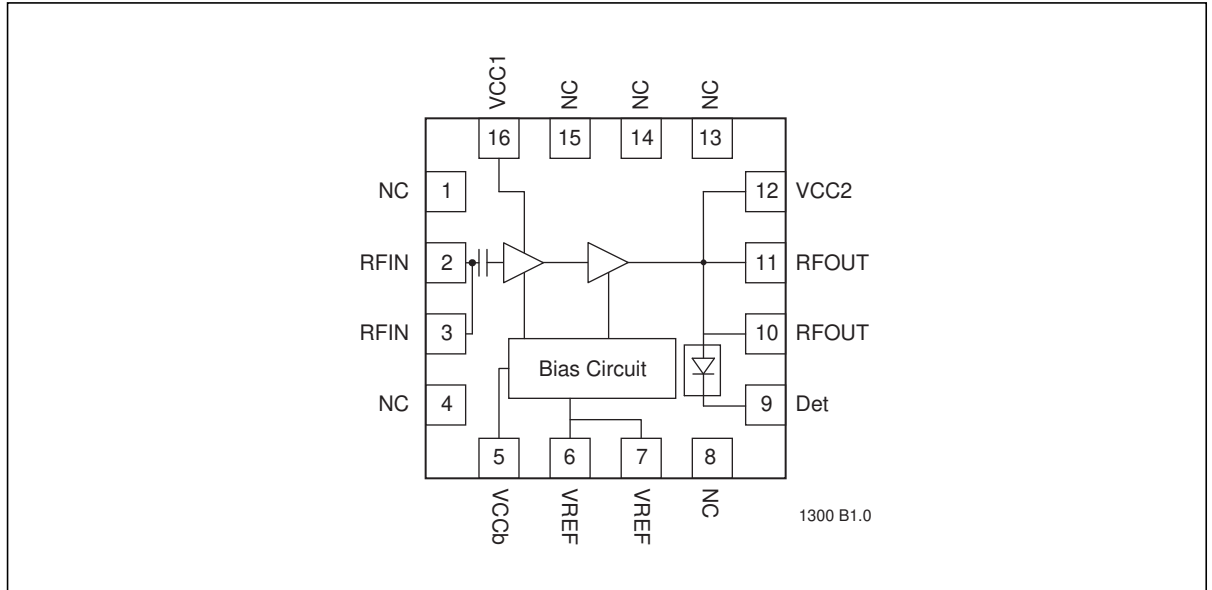

The SST12LP14A also features easy board-level usage along with high-speed power-up/down control through a single combined reference voltage pin. Ultra-low reference current (total  $I_{REF} \sim 2$  mA) makes the SST12LP14A controllable by an on/off switching signal directly from the baseband chip. These features coupled with low operating current make the SST12LP14A ideal for the final stage power amplification in battery-powered 802.11b/g/n WLAN transmitter applications.

SST12LP14A has an excellent on-chip, single-ended power detector, which features a wide dynamic-range (>15 dB) with dB-wise linear operation and high stability over temperature (< +/-0.3 dB 0°C to +85°C), frequency (< +/-0.3 dB across Channels 1 through 14), and output load (< +/-0.4 dB with 2:1 output VSWR all phases). The excellent on-chip power detector provides a reliable solution to board-level power control.

The SST12LP14A is offered in 16-contact VQFN package. See Figure 2 for pin assignments and Table 1 for pin descriptions.
